Glossary

Specific terms and acronyms used throughout this strategy are listed and described in the table below.

TERM	DEFINITION
A2I	Albury to Illabo
AEP	Annual Exceedance Probability
AHD	Australian Height Datum
ARTC	Australia Rail Track Corporation
ASS	Acid Sulfate Soils
BARM	Biodiversity Assessment Report Memo
CA	Consistency Assessment
CEMF	Construction Environmental Management Framework
CEMP	Construction Environmental Management Plan
Change	Macquarie Dictionary: A variation, adjustment, alteration, deviation or transformation to the project scope, construction methodology or design.
CIZ	Construction Impact Zone; The proposed construction area in addition to the approved 'construction boundary'.
CNVIS	Construction Noise and Vibration Impact Statement
CNVMP	Construction Noise and Vibration Management Plan
CoA	Condition(s) of approval
Compatible	Macquarie Dictionary: Capable of existing in harmony. Capable of orderly, efficient integration with other elements in a system.
Consistent	Macquarie Dictionary: Agreeing or accordant; compatible; not self-opposed or self-contradictory; constantly adhering to the same principles, course, etc.
Consistent with	Means that carrying out the project (as approved) will comply with the terms of the approval despite the proposed change. (See Barrick Australia Ltd v. Williams [2009] NSWCA 275)
Construction Boundary	As defined in the Division 5.2 approval, the area physically affected by work as defined in the Project Description as described in the documents listed in CoA A1.
Division 5.2 Approval	An approval under Division 5.2 of the NSW *Environmental Planning and Assessment Act 1979* for State Significant Infrastructure / Critical State Significant Infrastructure.
EAD	Environmental assessment documentation, as listed in CoA A1.
EIS	Environmental Impact Statement
EMMs	Environmental Management Measures
EP&A Act	*Environmental Planning and Assessment Act 1979*
EPBC Approval	An approval of a controlled action issued by the Australian Government Minister under Section133 of the Commonwealth *Environment Protection and Biodiversity Conservation Act 1999.*
EPL	Environment Protection Licence (#21984)
HV	Heavy Vehicles
IRPL	Inland Rail Pty Ltd (subsidiary of ARTC)

LAA	Land Access Agreement
LGA	Local government area
LoS	Level of Service
MR	Martinus Rail
NCA	Noise Catchment Area
NML	Noise Management Level
NSW	New South Wales
PCT	Plant Community Type as described in the vegetation classification system, approved by the NSW Plant Community Type Control Panel and described in the BioNet Vegetation Classification Database
PIR	Preferred Infrastructure Report
PIR RtS	Preferred Infrastructure Report Response to Submissions report
Proposed Change	The construction change which is the subject of this consistency assessment (extension of the CIZ within Junee precinct.
Rail Corridor	Land that is: (a) owned, leased, managed or controlled by a public authority for the purpose of a railway or rail infrastructure facilities, or zoned under an environmental planning instrument predominantly; or (b) solely for development for the purpose of a railway or rail infrastructure facilities.
Sensitive Receivers	Includes residences, educational institutions (including preschools, schools, universities, TAFE colleges), health care facilities (including nursing homes, hospitals), religious facilities (including churches), childcare centres and passive recreation areas (including outdoor grounds used for teaching). Receivers that may be considered to be sensitive include commercial premises including film and television studios, research facilities, entertainment spaces, temporary accommodation such as caravan parks and camping grounds, restaurants, office premises, and retail spaces), and industrial premises as identified by the Planning Secretary.
SLR NPT	SLR Noise Prediction Tool
SSI	State Significant Infrastructure
TGS	Traffic Guidance Scheme
TOL	Temporary Occupation Licence
UMM	Updated Mitigation Measure(s)
W	Work Scenario (CNVIS)

1 Introduction

1.1 Background

1.1.1 Division 5.2 approval

Australian Rail Track Corporation (ARTC) prepared an environmental impact statement for the Inland Rail – Albury to Illabo project (EIS) which was placed on public exhibition from 17 August 2022 to 28 September 2022. The EIS identified a range of environmental, social and planning issues associated with the construction and operation of the Albury to Illabo project and proposed measures to mitigate and manage those potential impacts.

In accordance with section 5.17(6)(b) of the EP&A Act, on 13 April 2023 the Planning Secretary directed ARTC to submit a Preferred Infrastructure Report (PIR) that provides further assessment of traffic and transport, noise and vibration, and air quality impacts. The PIR was also prepared to consider changes to the exhibited project that have arisen as a consequence of these further assessments and related submissions.

The Inland Rail – Albury to Illabo project was assessed as part of the following environmental assessment documentation (EAD):

- Inland Rail – Albury to Illabo Environmental Impact Statement (ARTC, August 2022);
- Albury to Illabo Response to Submissions (ARTC, November 2023);
- Albury to Illabo Preferred Infrastructure Report (ARTC, November 2023);
- Albury to Illabo Preferred Infrastructure Report Response to Submissions (ARTC, February 2024);
- Inland Rail – Albury to Illabo (SSI-10055) Response to request for additional information – Air Quality Assessment (letter dated 1 May 2024);
- Part 1 - Revised Technical Paper 8: Biodiversity Development Assessment Report (WSP, February 2024);
- Part 2 - Revised Technical Paper 8: Biodiversity Development Assessment Report (WSP, February 2024)

The Minister for Planning and Public Spaces approved the Albury to Illabo project (the Project) under section 5.19 of the *Environmental Planning and Assessment Act 1979* (EP&A Act) on 8 October 2024. The instrument of approval incorporated the Minister's Conditions of Approval.

For the purpose of this consistency assessment, the approval issued by the NSW Minister for Planning and Public Spaces for the Project is referred to as the Division 5.2 approval.

1.1.2 EPBC Act referral

The proposal was referred to the Australian Government Minister for the Environment under the Commonwealth *Environment Protection and Biodiversity Conservation Act 1999* (EPBC Act) due to potential for impacts on protected matters on 2 June 2020 (EPBC Referral No 202/8670). On 29 June 2020, the Australian Government Department of Agriculture, Water and Environment (DAWE) notified that the proposal is not a controlled action, and hence approval under the EPBC Act is not required.

1.1.3 Project changes

The Project has not been the subject of a modification under section 5.25 of the EP&A Act.

The following consistency assessments have been prepared to support the undertaking of the Project:

- EIS Consistency Assessment Report (Minor) Wagga Wagga Utilities (MR, January 2025)
- EIS Consistency Assessment Report (Minor) Kildare Catholic College (MR, April 2025)
- EIS Consistency Assessment Report (Minor) Junee to Illabo Clearances (MR, April 2025)

- EIS Consistency Assessment Report (Minor) Cassidy Parade and Pearson Street (MR, May 2025)
- EIS Consistency Assessment Report (Minor) Signalling Scope (MR, currently pending approval)
- EIS Consistency Assessment Report (Minor) Driver Platforms (MR, currently pending approval)

1.2 Purpose of consistency assessment

The purpose of this consistency assessment is to:

- Describe the Proposed Change relative to the Division 5.2 approval.
- Assess the environmental impacts associated with the Proposed Change relative to the Division 5.2 approval.
- Determine if the Proposed Change is consistent with the Division 5.2 approval or whether further approval is required either for a modification application or a new Project.

2 Proposed Change

2.1 Description of Proposed Change

The EAD identified the indicative proposal sites to enable construction of the reference design for the Albury to Illabo (A2I) section of the Inland Rail program. Further detailed design, construction planning, and site surveys have identified refinements to the construction methodology and resulted in the requirement to adjust the construction boundary as defined in the Division 5.2 approval and described in the EAD.

The Proposed Change relates to the construction footprint at the following enhancement sites:

- Olympic Highway underbridge modifications
- Junee Station and surrounding enhancement sites (including Kemp Street Bridge, Junee Station pedestrian bridge, and Junee Yard Clearance)

This Consistency Assessment report (CA) considers the Proposed Change, which involves extending the area proposed to be physically affected by the Project, outside of the approved construction boundary. This includes adjustments to the Construction Boundary to allow for localised stockpiling of material, storage of plant, and to accommodate additional footprint required for detailed design.

For the purpose of this consistency assessment, the construction boundary, as proposed to be expanded, is referred to as the construction impact zone extension (CIZ extension). The proposed CIZ extension areas fall within the rail existing corridor and adjoining areas including roads and park space. The proposed CIZ extension areas are noted in Table 2-1 and shown in Figure 2-1 to Figure 2-5 below.

Table 2-1: Proposed CIZ extension areas

SITE NAME	LABEL	ACTIVITIES	INDICATIVE AREA (HA)	UP/DOWN/ LOCATION
Olympic Highway underbridge modifications	J6-001	Current access points are on Up main so rail must be crossed to access Down main. Proposed Change allows safe LV access and stockpiling on down main to enable shoulder reconditioning works.	0.72	Down
	J6-002	Potential LV / HV parking area and laydown and small stockpile area for spoil.	0.25	Up
	J6-003	Road closure to enable safe works during possessions. Area to facilitate use of franna crane to lift sleepers onto rail bridge, which will reduce time especially during the restricted possession timeframe.	0.22	Both
	J6-004	Enable abutment work, earthworks and access.	0.21	Down
	J6-005	Laydown and stockpile area for material and equipment storage to enable Olympic Hwy and Junee Yard slewing works.	0.51	Up
	J6-006	Enable abutment work, earthworks and access.	0.03	Up
	J6-007	Stockpiling of ballast and capping on Up main and laydown for plant to enable shoulder reconditioning works.	0.18	Up
	J6-008	Additional area for hi-rail access and area for laydown, material storage and stockpiling	0.53	Up

Junee Station and surrounds enhancement sites (including Kemp Street Bridge, Junee Station pedestrian bridge, and Junee Yard Clearance)	J4-001	Allow for safe entry/exit, safe manoeuvring of trucks for deliveries and LV parking. Also facilitate safe staging and small stockpile area. Road modification and maintenance activities including line marking at Olympic Highway roundabout including Seignior Street, Broadway, Main Street and Olympic Highway.	0.44	Junee Yard
	J4-002	Allow for entry/exit, safe manoeuvring, and safe staging areas and laydowns.	0.3	Junee Yard
	J4-003	Potential crane pad for pedestrian bridge removal and access from carpark.	0.15	Junee Station carpark
	J4-004	Allow for entry/exit, safe manoeuvring, and safe staging areas and laydowns.	2.56	Junee Yard
	J2-001	Extension of CIZ to facilitate construction of detailed design and construction access.	0.05	Endeavour Park
	J2-002	Extension of CIZ to facilitate the extension of the pedestrian footpath and any road/pavement rectification work.	0.11	Hill Street
	J2-003	Proposed Eastern Satellite minor ancillary facility site compound area, for LV parking and toilets.	0.15	Kemp Street east
	J2-006	Extension of CIZ for construction access, signalling works and to support Kempt Street Bridge works.	0.59	Junee Yard
	J2-007	Proposed Endeavour Park minor ancillary facility site compound location.	0.45	Endeavour Park
	J2-008	Extension of CIZ to facilitate construction of permanent roadworks and provide construction access off Olympic Highway.	0.05	Olympic Highway
	J2-009	Extension of CIZ to facilitate the extension of the closure on Edgar Street to the corner of William Street and access to the proposed Bull ring park laydown.	0.27	Edgar Street
	J2-010	Additional laydown / stockpile area for site won spoil and equipment on eastern side of rail.	0.97	Bullring Park
	J2-012	Traffic control and detours required in association with bridge demolition.	2.85	Seignior Street

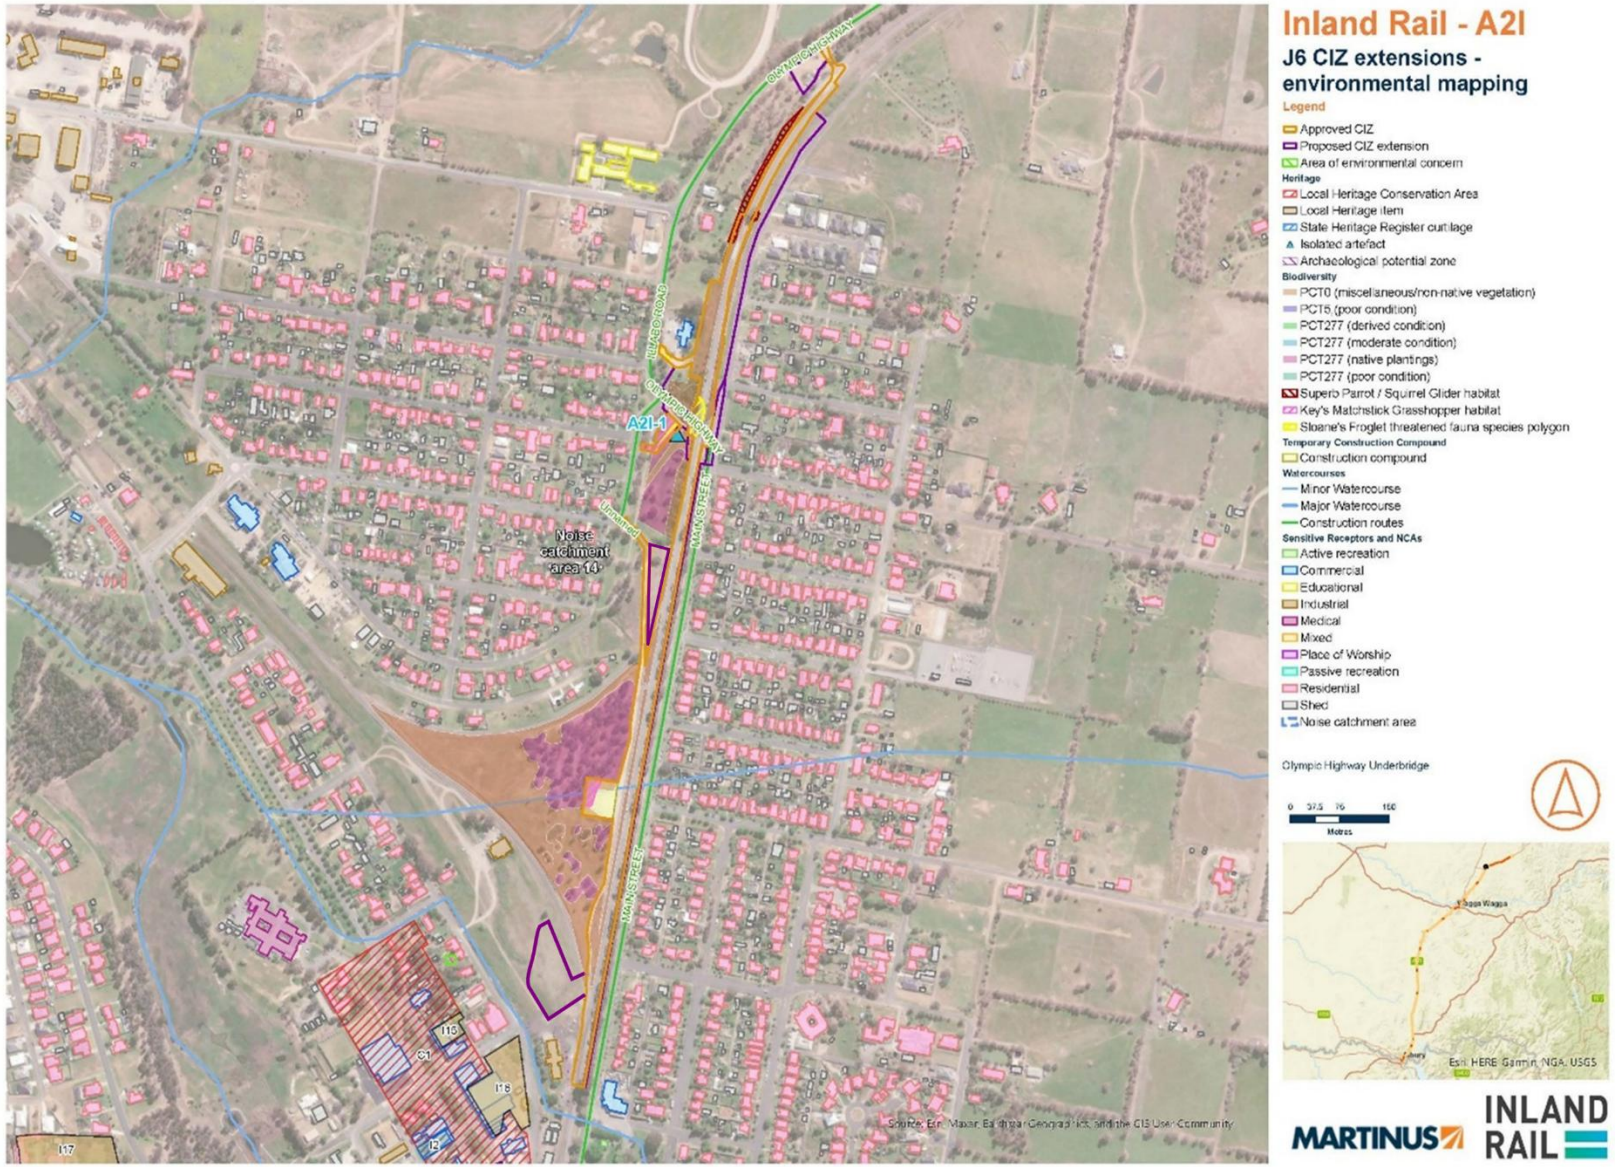

Figure 2-1: Proposed Change in relation to the Olympic Highway underbridge enhancement site

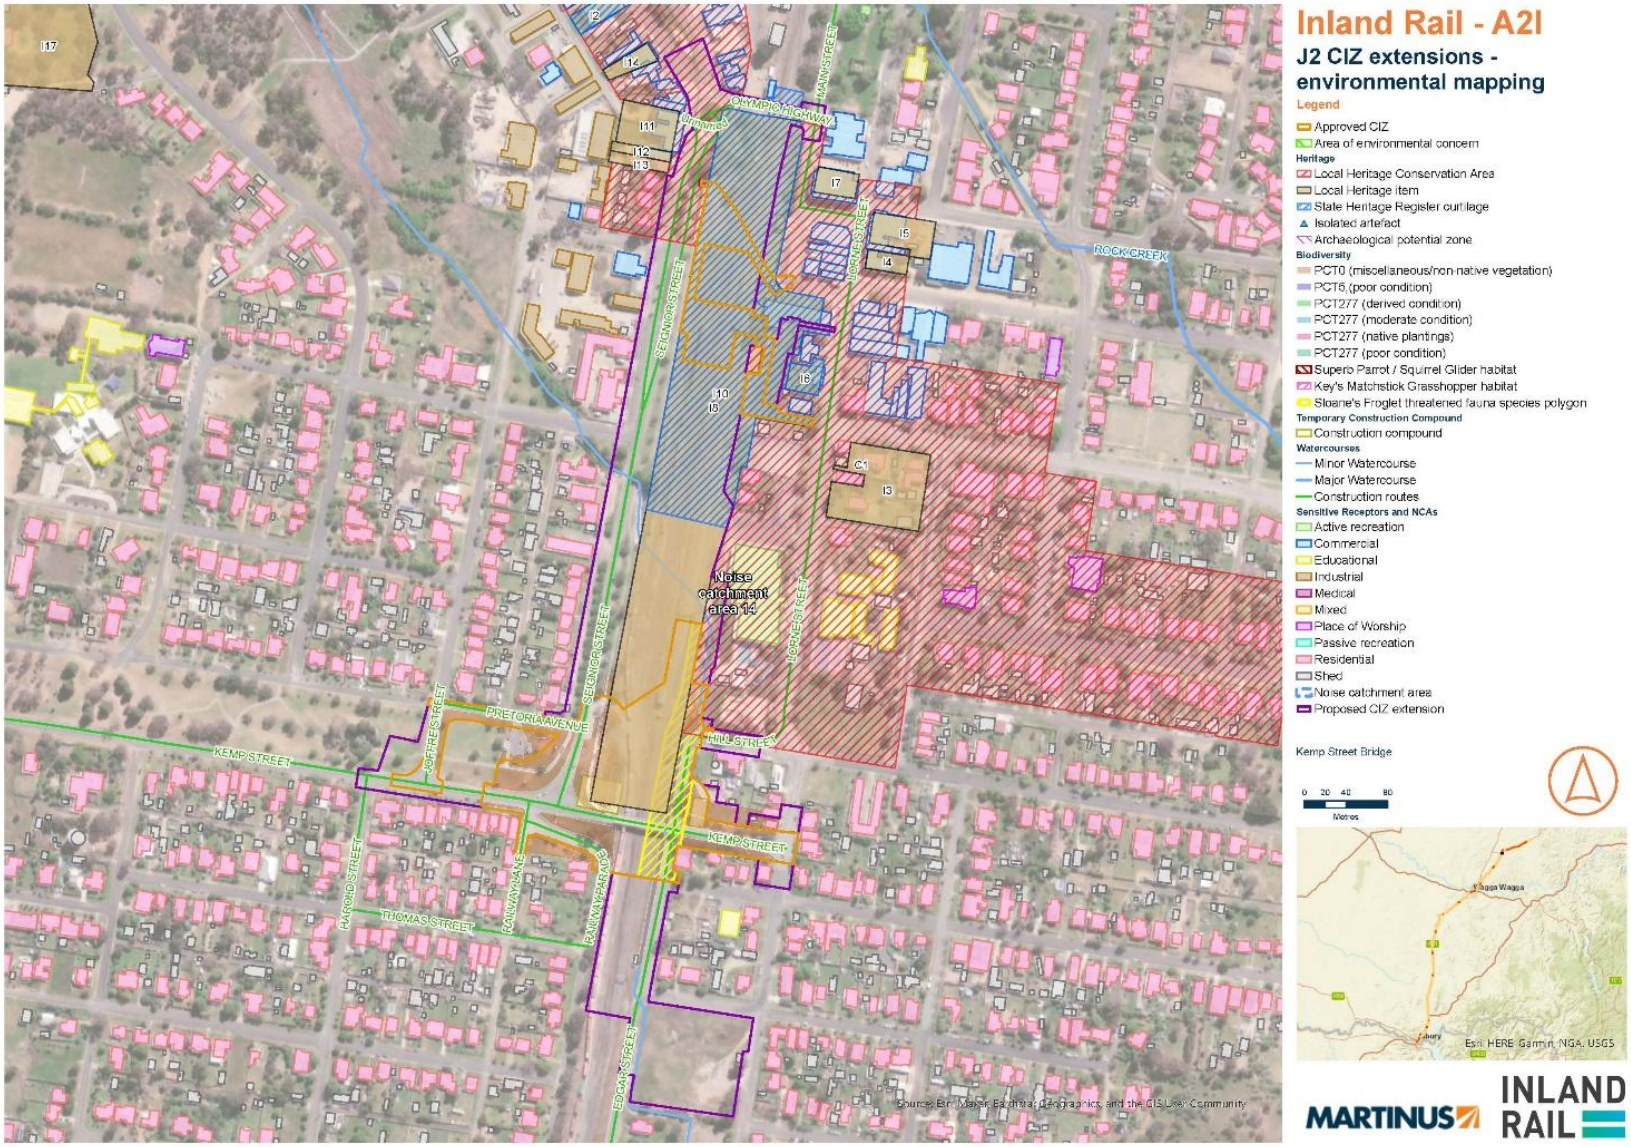

Figure 2-2: Proposed Change in relation to the Junee Station and surrounding enhancement sites

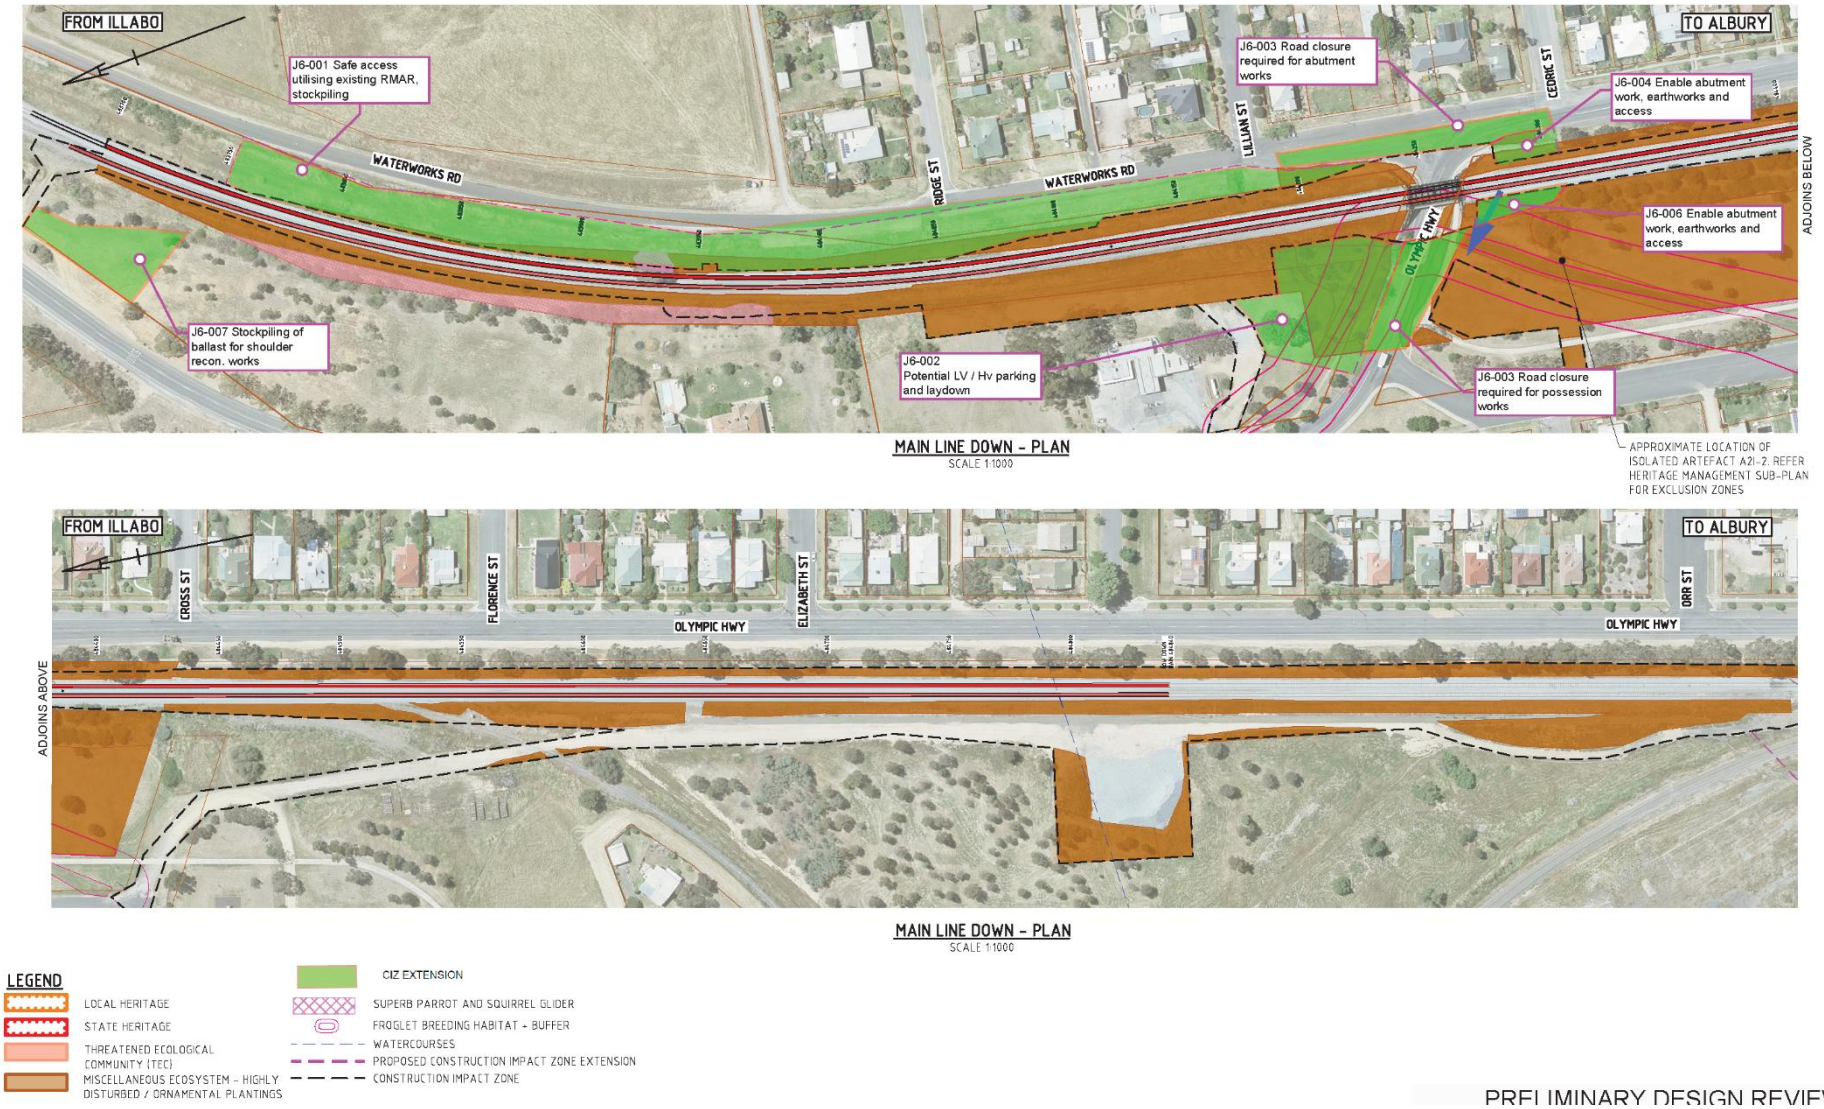

Figure 2-3: Proposed Change Area References

Figure 2-4: Proposed Change Area References

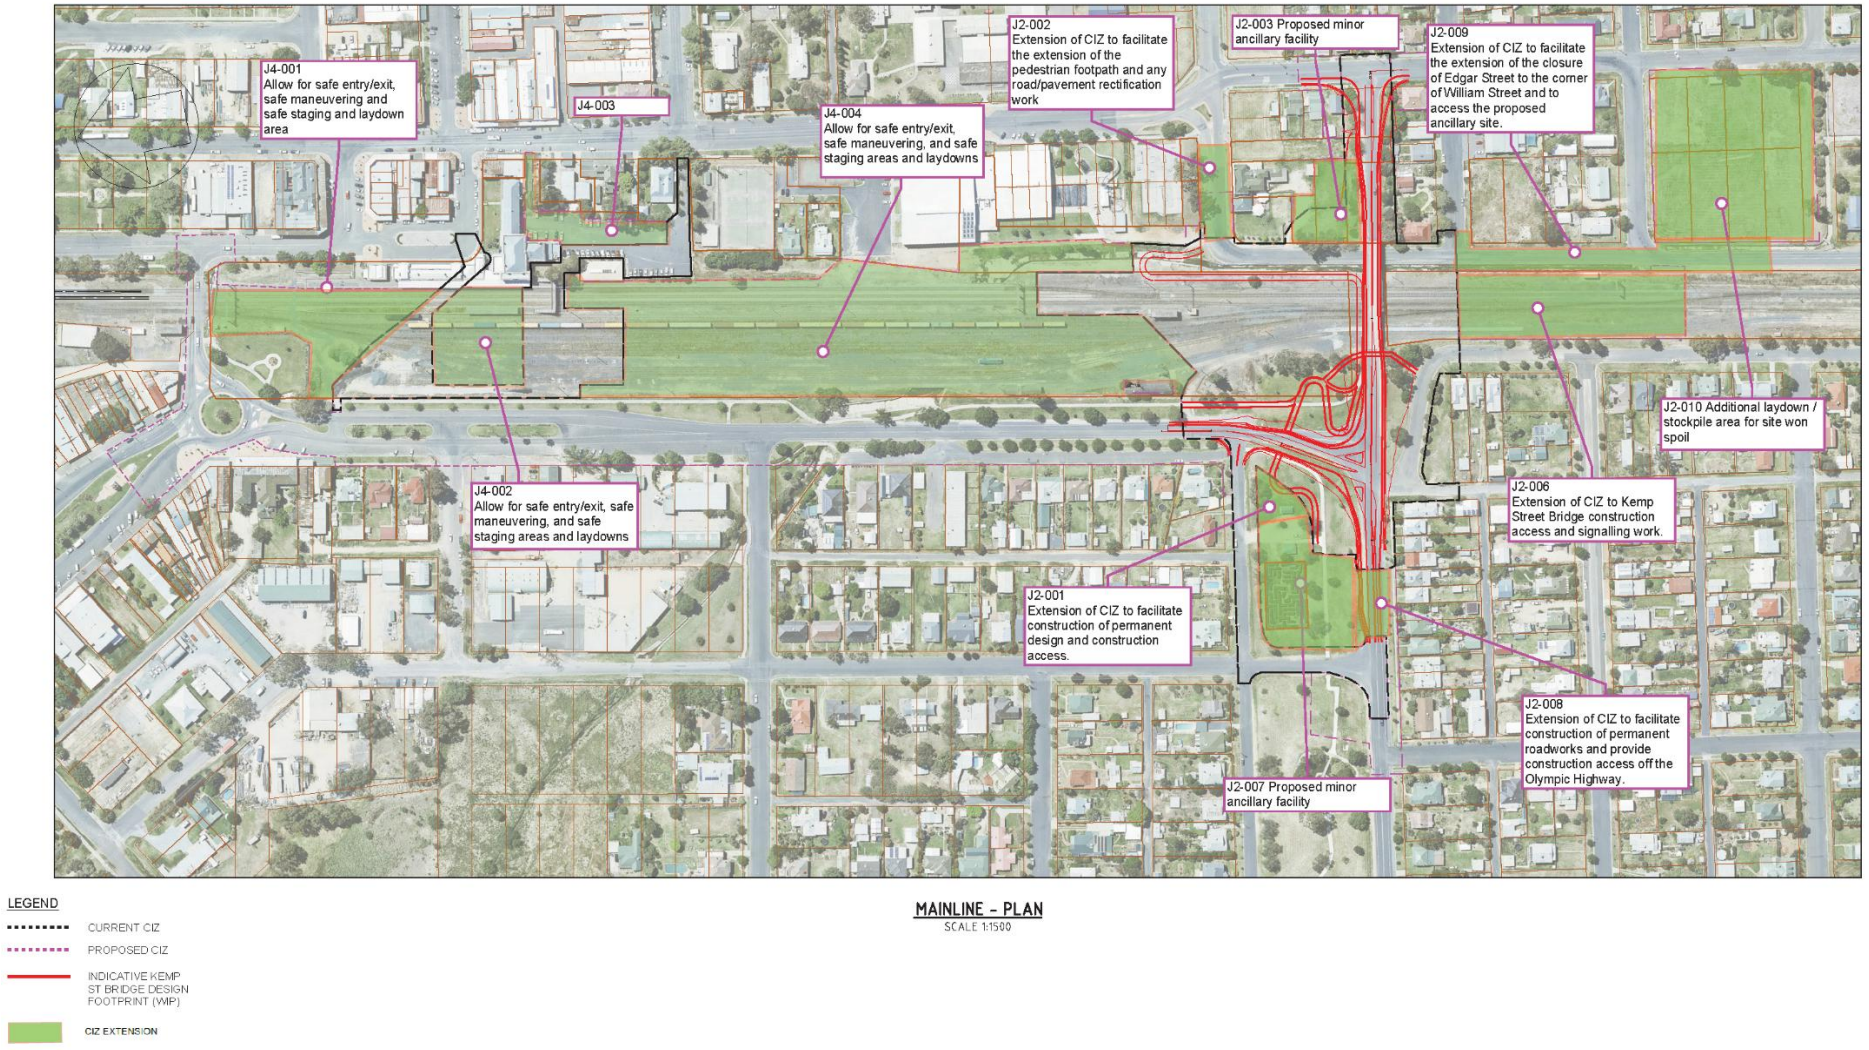

Figure 2-5: Proposed Change Area References

2.1.1 Methodology

Chapter 8 of the EIS provides an overview of construction activities for the Project and describes construction activities planned for each of the enhancement sites. The Proposed Change would enable these construction activities to occur and would not introduce additional activities at the Junee Yard clearances, Olympic Highway underbridge, or Kemp Street bridge enhancement sites.

Construction activities, including the required plant and equipment, that would be undertaken within the proposed CIZ (by extension of the construction boundary) are considered below.

Activities and work plan

The Proposed Change is required to support the following activities associated with the Project:

- Site establishment activities, which include:
  - Traffic management
  - Erosion and sediment controls
  - Trimming and removal of vegetation
- Laydown and stockpiling of materials such as:
  - Ballast
  - Capping
  - Culverts
  - Shoulder reconditioning works
  - Track slew works
  - Bridge sleeper replacement and abutment works
  - Track removal works

Plant and equipment

Plant and equipment required for these activities include:

- Plant (general):
  - Light vehicles
  - Welders trucks (Medium Rigid)
  - 10t Hi-rail Hydremas
  - FEL (Volvo L120F)
  - Hi-rail excavators
  - Water Trucks
  - 12t Smooth Drum Roller
  - Crane Franna
  - Tool/crew trucks
  - Slasher excavator
  - EWPs
  - Truck and dog
  - NDD trucks

    - Excavators
    - Tipper truck
    - Hand tools
- Plant (rail):
    - Tamper
    - Regulator
- Equipment:
    - Plate compactors
    - Hand tools
- Line Marking equipment:
    - Bobcat with pavement grinder / pavement profiler
    - Line marking truck
    - Light vehicles including traffic control
    - Water cart and street sweeper
    - Lighting towers

2.2 Need

The EAD identified the 'Proposal site area' consisting each of the enhancement sites to enable construction of the reference design, which forms the construction boundary, as defined in the Division 5.2 approval. Further detailed design and site surveys resulted in the requirement to adjust the approved construction boundary to better allow for site access from the public road network and within the rail corridor, safe manoeuvring, and sufficient space for construction ancillary facilities.

The Proposed Change is required for constructability of the Project, which is not adequately considered as part of the reference design in the EIS, particularly where the Construction Boundary dissects access roads and embankments, which are required to access key components of the rail corridor.

2.3 Location and setting

The Proposed Change relates to the Olympic Highway underbridge, Junee Station and surrounding enhancement sites (including Kemp Street Bridge, Junee Station pedestrian bridge, and Junee Yard Clearance) clearances within the Junee Precinct (refer to Figure 2-1 to Figure 2-5) in the Junee local government area (LGA).

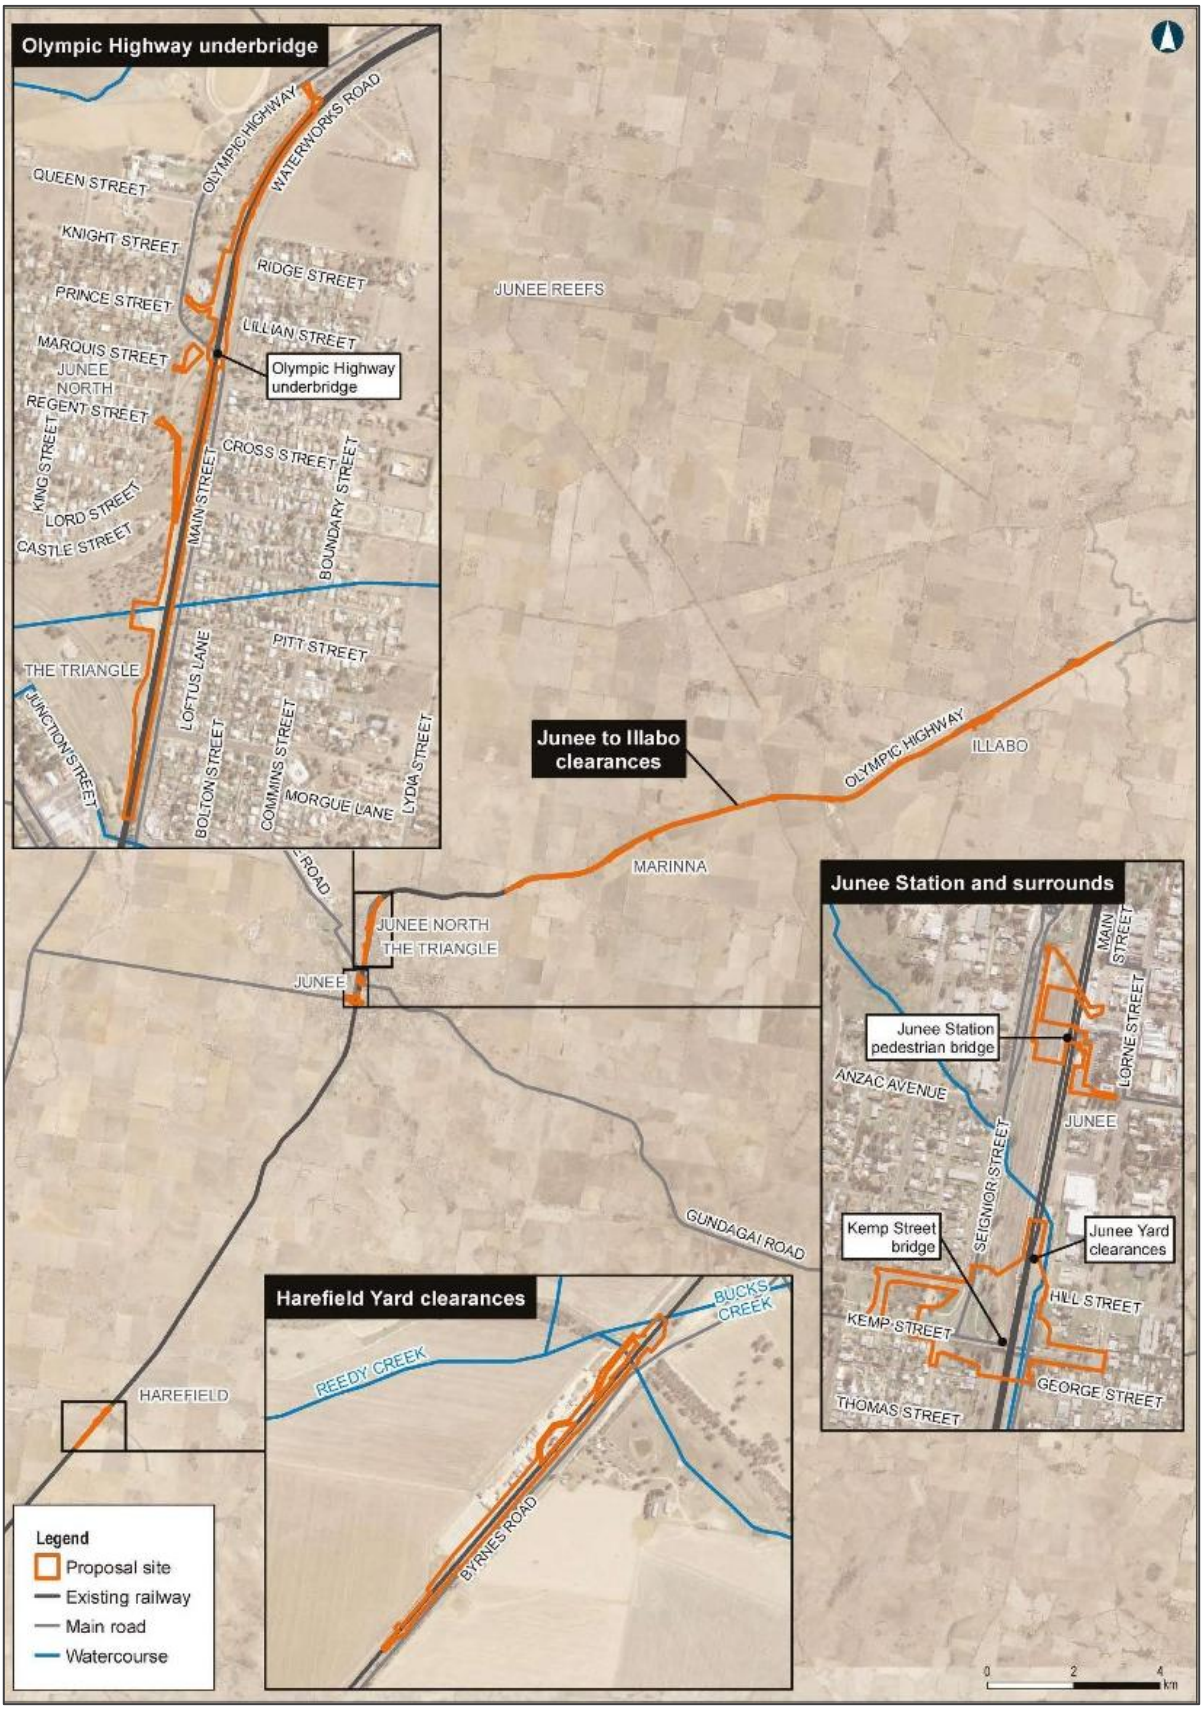

Figure 2-6: EAD showing regional context and location in relation to the Proposed Change

The Proposed Change falls within the approximate chainages and 48580 and 483700 along the Main South Line. Specific location and setting information in relation to environmental aspects is contained in the Chapter 4 of the EIS.

2.4 Construction hours

Activities within the CIZ permitted by the Proposed Change would be undertaken during the same hours as adjoining areas within the construction boundary.

Work activities will be timetabled to be carried out during the approved standard construction hours, where possible. The approved construction hours as follows:

- 7:00am to 6:00pm Monday to Friday, inclusive;
- 7:00am to 6:00pm Saturday; and
- At no time on Sundays or public holidays.

As outlined in CoA E70, any highly noise intensive works that result in an exceedance of the applicable NML at the same receiver must only be undertaken between:

- 8:00am to 6:00pm Monday to Friday;
- 8:00am to 1:00pm Saturday;
- If continuously, then not exceeding (3) hours, with a maximum cessation of work of not less than an hour.

Construction of the Project may include use of areas within the extended CIZ outside of standard working hours and the hours approved as part of CoA E69. Any out of hours within the extended CIZ, including those undertaken during possessions, would be implemented in accordance with CoA E71.

The Proposed Change would host construction activities from July 2025 until the completion of construction of the Project.

3 Consultation

Inland Rail does not always carry out consultation for consistency assessments. However, in some cases consultation may be carried out to:

- Help identify the nature and scale of the impacts.
- Involve the community in the options considerations for the Proposed Change.
- Manage community expectations for the Project.
- Provide the best design outcome that minimises environmental impacts.

The community would be notified in accordance with Section 7.1 of the Community Communication Strategy (IRPL, 2024), including where works may be required outside of the approved construction hours for A2I, prior to commencement of works. Any complaints, feedback or enquiries would be handed in accordance with Section 8 of the Community Communication Strategy.

Consultation with each of the affected landowners where works are proposed outside the construction boundary would be undertaken prior to commencement of works.

Where arrangements such as licences are required for use of land adjacent to the rail corridor for access or construction related activities (such as stockpiling), these arrangements would be made in consultation with the relevant landowner or, in the case of access from the public road network, the relevant road authority.

4 Environmental Assessment

4.1 Environmental risk review

An environmental risk review of the proposed activity has been undertaken and is provided below in Table 4.1. Assessments of potential impacts are provided in greater detail for the following environmental aspects:

- Traffic and transport (Section 4.2)
- Noise and vibration (Section 4.3)
- Aboriginal heritage (Section 4.4)
- Non-Aboriginal heritage (Section 4.5)
- Biodiversity (Section 4.6)
- Flood risk (Section 4.7)
- Soils and contamination (Section 4.8)
- Air quality (Section 4.9)
- Landscape and visual (Section 00)

Table 4-1: Consistency assessment review

ISSUE	Y/N	NOTES
Are works required outside the IR property acquisition boundary, or land not previously impact on by project works?	Yes	Land Access Agreements and Temporary Occupation Licences are currently being developed. Where possible CIZ extensions have been modified to keep the proposed works areas within the rail corridor to minimise impact on landholders. Copies of LAAs and TOLs will be provided prior to those areas being occupied. Conditional approval is requested of this CA to this effect.
Will the works result in any changes to form or functionality of the approved project?	No	The Proposed Change would not impact on the form of functionality of the approved project. The Proposed Change is required to improve constructability of the approved Project following detailed design and would involve the same construction activities and operation in the EAD.
Are there any potential impacts on traffic and transport associated with the works?	Yes	The Proposed Change may result in localised and short-term traffic and transport impacts. Potential traffic and transport impacts are considered in greater detail in Section 4.2.
Are there any potential noise and vibration impacts associated with the works?	Yes	The Proposed Change may result in short-term noise and vibration impacts, which would be consistent with the level of impact considered in the EAD. Potential noise and vibration impacts are considered in greater detail in Section 4.3.
Are there any potential impacts on known Aboriginal heritage items or sites located in the vicinity of the works?	Yes	The Proposed Change is located near isolated artefact A2I-2. Potential impacts to Aboriginal heritage items are considered in greater detail in Section 4.4.
Are there any potential impacts on non-Aboriginal heritage items or sites located in the vicinity of the works?	Yes	The Proposed Change is located in proximity to known non-Aboriginal heritage items and sites. These impacts are therefore considered in greater detail in Section 4.5
Are the works within 50m of an EEC or threatened species?	Yes	A Biodiversity Assessment Report Memo (BARM) for the Proposed Change has been developed. The impacts identified in the BARM is i considered in greater detail in Section 4.6.
Do the works require clearing of native vegetation or habitat trees?	No	Minor trimming and clearing of non-native vegetation is required as part of the Proposed Change. A Biodiversity Assessment Report Memo (BARM) for the Proposed Change has been developed. The impacts identified in the BARM is i considered in greater detail in Section 4.6.

Are the works within 40m of a waterway or water body?	Yes	A tributary to Houaghans Creek is within 50m of the Proposed Change at Olympic Highway and flows to the north. The Proposed Change at Junee Station and pedestrian bridge intersects Lower Butlers Gully. Impacts to waterways are considered in greater detail in Section 4.7.
Are the works located on flood prone land?	Yes	The Proposed Change is affected by local overland flooding. Potential impacts to flood risk are considered in greater detail in Section 4.7.
Are the works located on bushfire prone land?	No	The Proposed Change is not located on bushfire prone land.
Do the works involve ground disturbance of more than 2 hectares (ha)?	Yes	The changed construction boundary required as part of the Proposed Change includes an additional area of up to 7.55ha. The extent of ground disturbance required for the Proposed Change would be less than the proposed construction impact zone, though would still likely involve ground disturbance of an area that is more than 2ha. Potential soil impacts are considered in greater detail in Section 4.8.
Are the works in an area of known salinity hazard risk?	Yes	The Proposed Change is located in an area of moderate salinity hazard. The impacts associated with salinity are discussed in greater detail in Section 4.8.
Are the works in an area of known acid sulfate soil risk?	Yes	The Proposed Change is located in an area of low probability for acid sulfate soils (ASS) occurrence. Potential impacts associated with ASS are considered in greater detail in Section 4.8.
Will works require temporary or permanent placement of surplus spoil material?	Yes	The Proposed Change is required for stockpiling, particularly along the Junee Yard and Olympic Highway enhancement sites where the stockpile/laydown areas nominated in the EAD are insufficient in size or contain legacy stockpiles. Therefore, the Proposed Change would require placement of surplus spoil material, however this can be accommodated within the proposed stockpile/laydown sites and reused/disposed of in accordance with Chapter 23 of the EIS.
Are the works in an area of known contamination risk?	Yes	The Proposed Change is located in an area noted as a general contamination risk and intersects multiple area of environmental concern (AEC) sites discussed in the EAD. Potential impacts associated with contamination are considered in greater detail in Section 4.8.
Are there any potential air quality impacts associated with the works?	Yes	The Proposed Change could result in minor, short-term air quality impacts, which would be consistent with the level of impact considered in the EAD. These impacts are discussed in greater detail in Section 4.9.
Are there any potential landscape and visual impacts associated with the works?	Yes	The Proposed Change could result in landscape and visual impacts due to placement of materials, plant and equipment along the rail corridor for the duration of the construction phase of the Project. These impacts are discussed in greater detail in Section 0.
Will works result in any operational impacts further to those detailed in the approved project?	No	The Proposed Change is required to facilitate construction related activities within the rail corridor and adjoining lands. The Proposed Change may would not represent an increase in operational impact compared to that which was assessed as part of the approved project.

4.2 Traffic and transport

4.2.1 Existing environment

The following discussion is drawn from Technical Paper 1: Traffic and Transport of the EAD.

The Proposed Change is located on land within and adjacent to the existing rail corridor which forms part of the Main South Line in the NSW rail network.

Construction traffic

The Olympic Highway passes through the Olympic Highway underbridge, Junee Yard, and Kemp Street bridge enhancement sites and is a major arterial road that carries a high volume of traffic in the region.

The construction volume for Olympic Highway is assessed as meeting a Level of Service (LoS) A, meaning traffic flow generally remains stable. For Junee Station and surrounds, the assessment shows that with construction traffic all road links are expected to operate at LOS B or better, which is considered stable flow conditions. Key local roads and LoS (including construction traffic) that serve the enhancement sites are summarised in Table 4-2.

Table 4-2: Overview of key roads and performance – Junee Precinct (Table 9-12 EIS Chapter 9: Transport and traffic)

ENHANCEMENT SITE	KEY ROADS	MAXIMUM AND MINIMUM TRAFFIC VOLUMES FOR NON-ARTERIAL ROADS (DAILY TWO-WAY)	LOCAL ROAD PERFORMANCE
Olympic Highway underbridge	Main Street/Olympic Highway, Illabo Road/ Olympic Highway	Maximum/minimum – 592, 6% heavy vehicles (Illabo Road)	Roads operate with a LoS of A.
Junee Station and surrounds enhancement sites (including Kemp Street Bridge, Junee Station pedestrian bridge, and Junee Yard Clearance)	Kemp Street/Olympic Highway, Seignior Street, Humphreys Street, Main Street/Olympic Highway, Lorne Street/Peel Street/Ducker Street, Hill Street, Harold Street, Thomas Street, Railway Lane, Railway Parade, William Street, Edgar Street/Byrnes Road, Joffre Street, Pretoria Avenue, Anzac Avenue	Maximum—2,905, 2% heavy vehicles (Kemp Street) Minimum— 341, 3% heavy vehicles (Railway Lane, Railway Parade)	Roads operate with a LoS of B or better.

4.2.2 Impact Assessment

The Proposed Change would involve adjustments to the Construction Boundary to enable construction methodology based on detailed design, to improve access, and to provide additional access points to the rail corridor from the public road network.

At the Olympic Highway underbridge, the CIZ extension (J6-005) will allow short-term, temporary road closures during possession works on the rail bridge including sleeper replacement on the bridge and bridge abutment works.

The extension along Edgar Street (J2-009) will facilitate the closure of Edgar Street to the corner of William Street and provide safe access for deliveries to the proposed laydown area at Bullring Park. The construction diversion routes outlined in the EIS (Tech Paper 1) divert traffic along Ducker Street and William Street, therefore, the proposed closure of Edgar Street would not result in any additional diversions or impacts. No private property access points are located along this section of Edgar Street and therefore, no access impacts are expected.

During the Kemp Street bridge closure, light vehicles would be diverted along Joffre Street and Anzac Avenue to connect Kemp Street and Seignior Street (Olympic Highway). Heavy vehicles would be diverted around the Junee township via Goldfields Way and Old Junee Road. Safety assessments, turn warrants assessment and swept path assessments would be carried out as part of the Junee Precinct Traffic Management Plan.

Construction Traffic and Parking

The Proposed Change would not introduce any additional construction traffic than what has already been assessed as part of the EAD and therefore would not impact the assessed LoS (B or higher) for Olympic Highway, or any of the local roads that provide access to the enhancement sites.

The Proposed Change would allow for better utilisation of the existing rail corridor, and the area described as the 'Bullring' for vehicle parking and may reduce demand for on street parking, particularly surrounding the Olympic Highway underbridge enhancement site in Junee and the Kemp Street bridge replacement site respectively.

Site access points

Generally, the Proposed Changes will utilise the existing access points outlined in the EAD; additional access points are shown in Appendix A. The access point off Waterworks Road at 483.96 KM in the Olympic Highway underbridge enhancement site is an existing access point, similar to others along the rail corridor.. The access point at the corner of William and Edgar Street is also an existing rail corridor access, the access will be appropriately stabilised. Any traffic treatments, traffic control or the requirements would be considered as part of Road Safety Audits and would be subject to traffic management plans

Access to the proposed laydown area at Bull Ring Park would be via an existing access point off Ducker Street. An existing access point to the rail corridor is located at the corner of William Street and Edgar Street, which will require stabilising as part of the Proposed Change.

Pedestrians and active transport

Generally, the proposed changes are located within the existing rail corridor or adjoining land and therefore would not interrupt or otherwise impact any pedestrian routes.

The EIS (Tech Paper 1) assessed that Olympic Highway underbridge would require the closure of the pedestrian path under the bridge for approximately five days. The Proposed Change at Olympic Highway includes additional space for road closures that will enable sleeper replacement on the bridge and bridge abutment works. These works are planned during rail possession periods when the demand for pedestrian and cyclist movement in this area is expected to be low. Pedestrians would be managed by on-site traffic management during this period.

The EIS (Tech Paper 1) outlined that the shared path located within the enhancement site through Endeavour Park would be closed during construction and pedestrians would be detoured onto Pretoria Avenue and Joffre Street. The Proposed Change would extend the area of the shared path requiring closure; however, the proposed detour would remain the same and therefore, the impact to pedestrians would not increase. Footpaths are not provided along Edgar Street or Olympic Highway and therefore the proposed CIZ extensions along these roads would not impact any formalised pedestrian or shared access routes.

4.2.3 Conclusion

The Proposed Change would not generate any additional construction traffic or parking demand compared with what was assessed in the EAD.

The Proposed Change would not generate any additional construction traffic or parking demand compared with what was assessed in the EAD. No additional impacts to pedestrian and cycle paths are expected as a result of the Proposed Change.

These impacts would be generally in accordance with the impacts considered as part of the EAD and would be managed as per all applicable mitigation measures in the Conditions of Approval (CoAs) and Updated Mitigation Measures (UMMs), with any additional mitigation measures outlined in Table 4-12.

4.3 Noise and vibration

4.3.1 Existing environment

The following discussion is drawn from Technical Paper 6: Noise and vibration (non-rail) of the EAD and the following Construction Noise and Vibration Impact Statements (CNVIS):

- Junee Yard CNVIS (SLR Consulting Australia, August 2025 Doc No: 6-0052-210-EEC-J4-AS-0001_1) (Appendix A)
- Olympic Highway CNVIS (SLR Consulting Australia, July 2025 Doc No: 6-0052-210-EEC-J6-AS-0001_1) (Appendix A)

Common noise and vibration sources in the subject area are train movements along the operational rail corridor, major road traffic and local traffic. Potentially sensitive receivers are those that may be affected by changes in noise and vibration levels within the work area. Consistent with the adopted standards and guidelines, sensitive receivers in the work areas include residential dwellings, schools and education institutions, places of worship, childcare centres, medical facilities, commercial property and industrial premises.

The existing vibration environment in close proximity to the railway line includes vibration from existing freight train movements on the alignment. Additional sources of vibration may be associated with operation of industrial premises, road traffic operations and construction activities typical of the environment. Adjacent heritage structures are considered as vibration sensitive receivers due to the potential for cosmetic damage; however, a heritage structure should not be assumed to be more sensitive to vibration, unless it is structurally unsound.

In addition to the Junee Yard and Olympic Highway CNVISs, a separate noise scenario has been undertaken using the SLR NPT and included in Appendix B for the Olympic Highway line marking works which will occur as a once-off activity over a maximum of two night shifts. Works are anticipated to be completed within one night shift, the second night shift is contingency only. Daytime works were preferred and investigated however due to Olympic Highway being a state road, only a night time ROL has been approved.

Noise catchment area

Noise catchment area (NCA) was defined in the EIS to classify groups of sensitive receivers that are likely to have a similar existing noise environment and experience similar impacts from construction of the Project. These were determined through reference to aerial imagery and land use maps and verified during background noise monitoring.

The Proposed Change area is surrounded by a combination of residential and commercial receivers. The corresponding NCA, approximate number of receivers and noise management levels (NMLs) are noted below in and Table 4-4, Table 4-4 and shown in Figure 4-1.

Table 4-3: NCAs and background noise information

ENHANCEMENT SITE	NCA ID	APPROXIMATE NUMBER OF RECEIVERS IN NCA	DESCRIPTION	RBL (dBA)		
				Day	Evening	Night
JUNEE YARD PRECINCT	NCA 14	1,935	This is predominately suburban in nature and affected by noise sources including the junction of the main south and western lines, Olympic Highway and local road traffic	42	45	35

Table 4-4: NCAs and noise management levels

NCA ID	NOISE MANAGEMENT LEVEL (NML)					
	APPROVED HOURS (RBL + 10 dB)	OUT OF HOURS			SLEEP DISTURBANCE SCREENING LEVEL (RBL + 15dB or 52dBA)	SLEEP AWAKENING LEVEL
		Daytime (RBL + 5 dB)	Evening (RBL + 5 dB)	Night-time (RBL + 5 dB)		
NCA 14	52	47	47	40	52	65

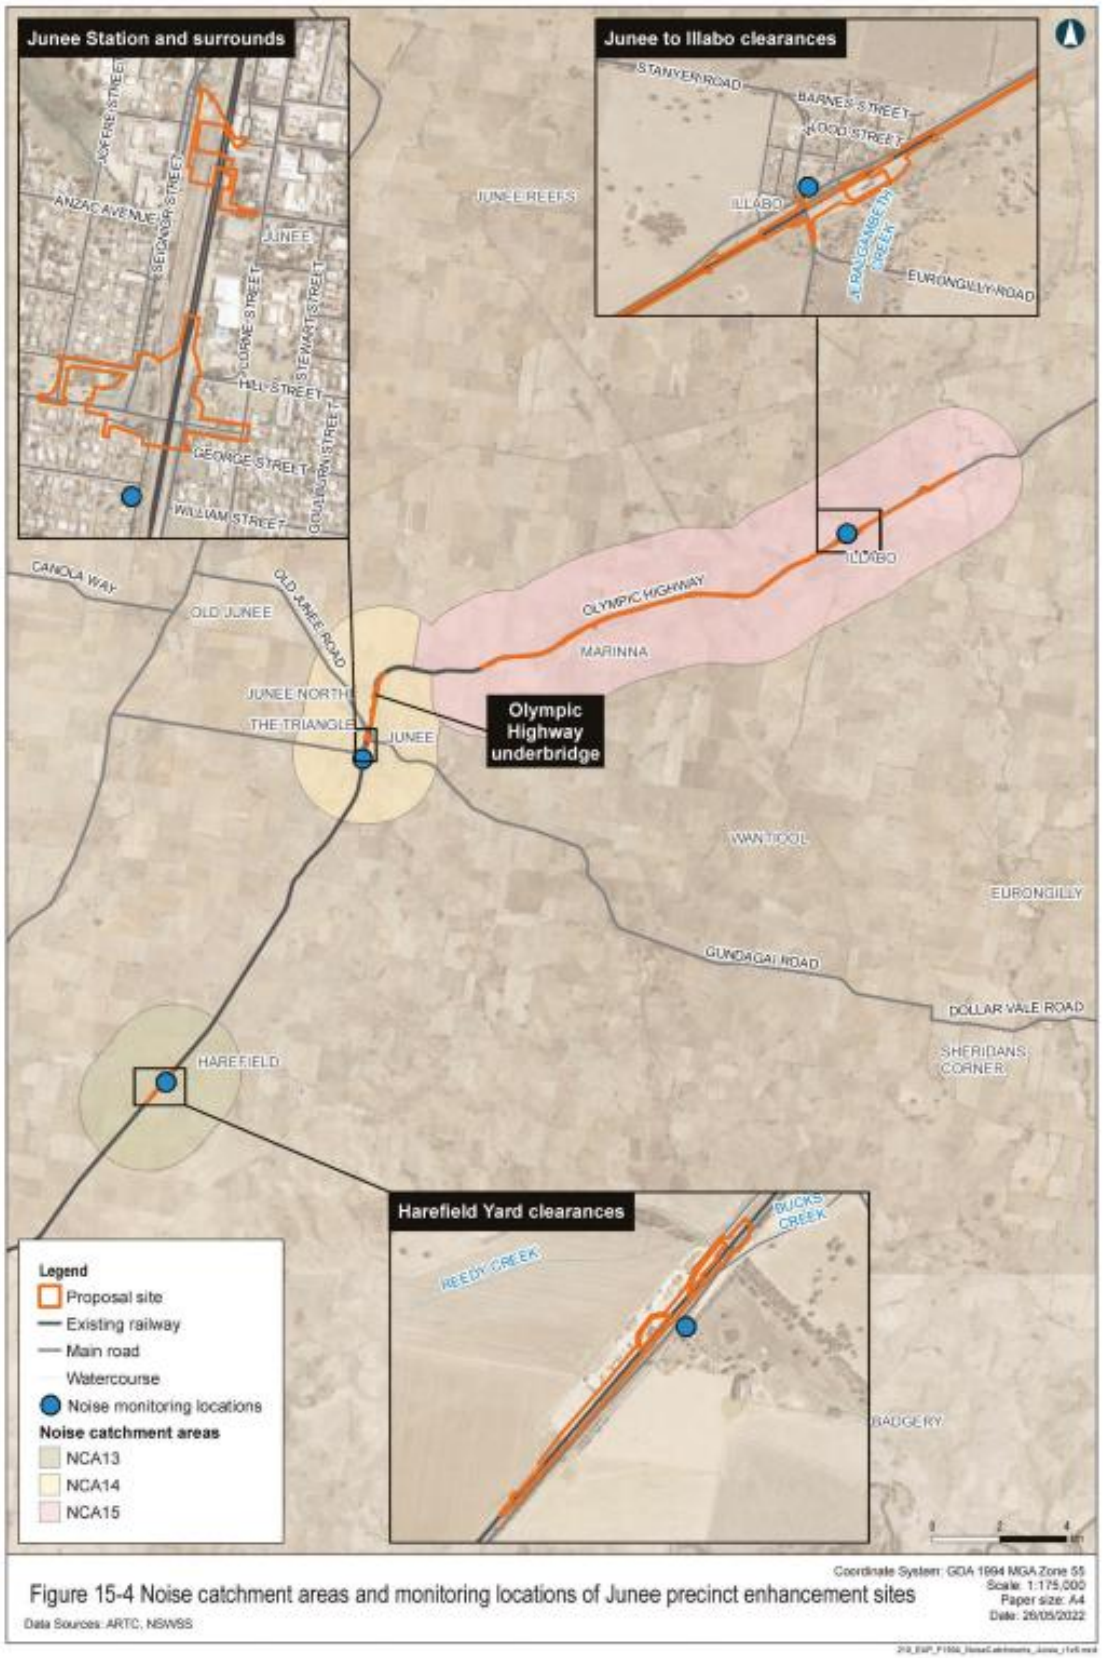

Figure 15-4 Noise catchment areas and monitoring locations of Junee precinct enhancement sites

Figure 4-1: EAD showing NCA 14 in relation to the Proposed Change

4.3.2 Construction hours

Construction hours for all four enhancement sites are as discussed in Section 2.4, with the following also noted:

Highly noise intensive works

'Highly noise intensive works' as per the Project Approval are defined as:

- use of power saws, such as used for cutting timber, rail lines, masonry, road pavement or steel work;
- grinding metal, concrete or masonry;
- rock drilling;
- line drilling;
- vibratory rolling;
- bitumen milling or profiling;
- jackhammering, rock hammering or rock breaking;
- impact piling; and
- tamping (for rail Projects).

As outlined in Condition of Approval (CoA) E70, any highly noise intensive works that result in an exceedance of the applicable NML at the same receiver must only be undertaken between:

- 8:00am to 6:00pm Monday to Friday;
- 8:00am to 1:00pm Saturday;
- If continuously, then not exceeding (3) hours, with a maximum cessation of work of not less than an hour.

Out-of-hours work

In accordance with CoA E73, where out-of-hours work (OOHW) is required for:

- For carrying out work that if carried out during standard hours would result in a high risk to construction personnel or public safety based on a risk assessment carried out in accordance with AS/NZS ISO 31000:2009: "Risk management; or
- Where the relevant roads authority has advised the Proponent in writing that carrying out the work during standard hours would result in a high risk to road network performance and a road occupancy licence will not be issued; or
- Where the relevant utility service operator has advised the Proponent in writing that carrying out the work during standard hours would result in a high risk to the operation and integrity of the utility network; or
- Work undertaken in a rail possession for operational or safety reasons.

This will be regulated through the OOHW Protocol except as permitted by an EPL.

4.3.3 Impact assessment

Noise Impacts

Predicted noise levels

The Proposed Change activities are referred to as 'Work Scenarios' in the CNVIS, with the following noted:

- Junee Yard:
    - W.001 as site establishment/demobilisation activities

  - W.002 as compound operation
  - W.003 as geotechnical investigations
  - W.004 as track work (peak)
  - W.005 as track work (typical)
  - W.006 as track tamping activities
  - W.007 as track tamping
  - W.008 as gantry removal
  - W.009 as signalling work
  - W.010 as pedestrian bridge removal, and
  - W.011 as signalling cable work
- Olympic Highway:
  - W.001 as site establishment/demobilisation activities
  - W.002 as compound operation
  - W.003 as geotechnical investigations
  - W.004 as driver platform surveys
  - W.005 as driver platform work
  - W.006 as track work (peak)
  - W.007 as track work (typical)
  - W.008 as track tamping activities

Junee Yard – residential receivers

All work scenarios will result in 'noticeable' to 'highly intrusive' noise impacts for all periods (Appendix B). The Junee Yard CNVIS impacts on residential receivers are summarised as follows:

- Highly Intrusive' noise impacts are predicted at the closest residential receivers for all work scenarios during both the approved daytime and daytime OOHW periods with the exception of *W.008* and *W.010* where worst-case 'moderately intrusive' noise impacts are predicted at the closest residential receivers.
- 'Highly Intrusive' noise impacts are predicted for all work scenarios with the potential to occur during the evening and night-time period, with the exception of *W.008* during the evening period where worst-case 'moderately intrusive' noise impacts are predicted.
- Compound operations outlined in *W.002* are generally expected to be limited to approved daytime hours. OOHWs presented are only expected when construction works are being undertaken under a rail possession.
- A single receiver closest to the Junction Street site compound is predicted to be 'highly noise affected' during work for scenarios *W.001* and *W.002*. For scenario *W.005* it is predicted that 20 residential receivers will be HNA during peak track works and two during typical track works in *W.006*. Seven receivers are predicted to be HNA during *W.007.*
- The HNA impacts predicted during *W.005* to *W.007* are expected be experienced when work occurs at the closest work location to each receiver. When work occurs further from these receivers, impacts are expected to be lower.
- Noise levels are predicted to exceed the sleep disturbance screening level and sleep awakening criteria for all work scenarios occurring during the night-time period. Sleep disturbance impacts would generally be caused by heavy vehicle movements and more noise intensive equipment. Where reasonable and feasible, these activities should be limited to the less sensitive periods to avoid noise impacts during more

sensitive out-of-hours periods. The number of awakening events would depend on several factors, including the equipment being used, the duration of noisy work and the distance of the work to each residential receiver. Further detail around the specific OOHW, (e.g. duration and justification) will be identified in the OOHW permit.

Junee Yard – other sensitive receivers

The Junee Yard CNVIS impacts for other sensitive receivers are summarised as follows:

- 'Moderately Intrusive' noise impacts are predicted from all work scenarios during approved daytime hours, except *W.004* and *W.011*, where worst-case 'clearly audible' noise impacts are predicted.
- 'Moderately intrusive' to 'clearly audible' impacts are predicted at the nearest other sensitive receivers for all scenarios during daytime OOHW periods, except *W.005* where 'highly intrusive' impacts are predicted at the closest other sensitive receiver.
- 'Moderately Intrusive' to 'clearly audible' noise impacts are predicted to occur for *W.005* to *W.007* during the evening period, with no 'highly Intrusive' noise impacts predicted. 'Clearly audible' impacts are predicted during the evening period for *W.002, W.008* and *W.009*. No impacts are predicted at other sensitive receivers in the evening period during *W.011.*
- A single 'other sensitive' receiver is predicted to experience 'highly Intrusive' noise levels during night-time hours for work scenarios *W.002* and *W.005* to *W.008*.
- Worst-case 'clearly audible' noise impacts are predicted during the night time period for *W.009* and *W.011.*
- Other sensitive receivers should only be considered impacted 'when in use'.

Olympic Highway – residential receivers

The Olympic Highway CNVIS impacts on residential receivers are summarised as follows:

- 'Moderately intrusive' noise impacts are predicted at the closest residential receivers for all scenarios during the approved daytime period and all scenarios occurring during out-of-hours periods.
- 'Highly intrusive' noise impacts are predicted at the closest residential receivers to the work for scenarios *W.001, W.003* to *W.006* and *W.008* during the approved daytime period and *W.001, W.003*, *W.005*, *W.006* and *W.008* during the OOH daytime period.
- 'Highly intrusive' noise impacts are predicted at the closest residential receivers to the work for scenarios *W.005, W.006* and *W.008* during the evening periods.
- 'Highly intrusive' noise impacts are predicted for all scenarios with the potential to occur during the night-time period (i.e. *W.002* and *W.005* through *W.008)*.
- Highly noise affected receivers are predicted during *W.003*, *W.005* and *W.006*, which include highly noise intensive equipment. The highest number of HNA receivers is predicted during *W.006*, due to the extent of the work area.
- The HNA impacts generated during *W.006* are predicted when track work occurs at the closest work location to each receiver. When track work occurs further from these receivers, impacts are expected to be lower.
- Noise levels are predicted to exceed the sleep disturbance screening level and sleep awakening criteria for all work scenarios occurring during the night-time period. Sleep disturbance impacts would generally be caused by heavy vehicle movements and more noise intensive equipment. Where reasonable and feasible, these activities should be limited to the less sensitive periods to avoid noise impacts during more sensitive out-of-hours periods. The number of awakening events would depend on several factors, including the equipment being used, the duration of noisy work and the distance of the work to each residential receiver. Further detail around the specific OOHW, (e.g. duration and justification) will be identified in the OOHW permit.

Olympic Highway – other sensitive receivers

The Olympic Highway CNVIS impacts for other sensitive receivers are summarised as follows:

- 'Clearly Audible' noise impacts are predicted at the closest 'other sensitive' receivers for scenarios *W.001*, *W.003,* and *W.006* through *W.008* during the approved daytime periods and *W.*003 and *W.006* through *W.008* during out-of-hours daytime periods.
- 'Clearly Audible' noise impacts are also predicted for *W.006* to *W.008* during the night-time period and for scenario *W.007* and *W.008* during the evening period.
- Worst-case 'clearly audible' impacts are predicted at other sensitive receivers for all other scenarios with the potential to occur during the night-time period.
- 'Moderately Intrusive' noise impacts are predicted at the closest 'other sensitive' receivers for scenarios *W.003* and *W.006* to *W.008* during the approved daytime period, *W.003* and *W.006* during the daytime out-of-hours period and for scenario *W.006* during the evening and night-time periods.
- Other sensitive receivers should only be considered impacted 'when in use'.

For Olympic Highway roundabout line marking (SLR NPT Appendix B) the following noise impacts are predicted:

- 'Highly Intrusive' noise impacts are predicted at 5 residential properties and 1 other sensitive receiver (Junee Hotel 21 Seignior St which has accommodation),
- 'Moderately Intrusive' noise impacts are predicted at 41 residential properties and 2 other sensitive receivers (The Crossing Motel 39 Seignior St and Commercial Hotel Junee 68 Lorne St, both have accommodation),
- 'Clearly Audible' noise impacts are predicted at 407 residential properties and 1 other sensitive receiver (Pani Thai Massage & Spa 1-5 Hill St – does not operate past 7pm so nil impacts anticipated),
- 'Noticeable' noise impacts are predicted at 515 residential properties and 2 other sensitive receivers (Junee Motor Inn 61 Broadway Junee and Red Cow Hotel 85 Junction St which does not have accommodation,
- 112 residential properties are predicted to experience noise levels above the sleep disturbance criteria and 5 residential properties are expected to experience noise levels triggering awakening events.

As per the Project CNVMP and consistent with Junee CNVIS mitigation measures:

- notification will be undertaken for all receivers,
- specific notification will be undertaken for all receivers predicted to experience 'Highly Intrusive' and Sleep Disturbance' and Awakening Events, and
- Respite offers will be provided to residential receivers predicted to experience 'Highly Intrusive' and Sleep Disturbance' and Awakening Events. Works are planned to be completed over one shift, with a second shift for contingency only therefore >2 consecutive sleep periods won't be impacted.

Ground-borne noise

In both Junee Yard and Olympic Highway CNVISs, it has been assessed that ground-borne construction noise impacts from the Project are not anticipated as vibration intensive work with the potential to generate perceptible ground-borne noise, is not included in the scope of work. Vibration intensive work for the Project will be completed outdoors meaning airborne noise levels at the nearest receivers are expected to be higher than the corresponding internal ground-borne noise levels.

Where airborne noise levels are higher than ground-borne noise levels it is not necessary to evaluate potential ground-borne noise impacts and as such, they have not been considered further for this assessment.

For Olympic Highway roundabout line marking (SLR NPT Appendix B) no significant vibration generating equipment is required.

Vibration impacts

In both Junee Yard and Olympic Highway CNVISs, it has been assessed that vibration intensive items of equipment that would be required during work assessed in this CNVIS include a vibratory roller, ballast tamper and hydraulic hammer. The plant items required and the potential impacts during vibration intensive work have been assessed using the Transport CNVG-PTI minimum working distances for cosmetic damage and human response shown in Table 4-5.

For Olympic Highway roundabout line marking (SLR NPT Appendix B) no significant vibration generating equipment is required.

Table 4-5: Vibration intensive equipment

ACTIVITY	PLANT ITEM/RATING/ DESCRIPTION	MINIMUM DISTANCE			
		COSMETIC DAMAGE			HUMAN RESPONSE (NSW EPA GUIDELINE)
		RESIDENTIAL AND LIGHT COMMERCIAL (BS 7385)	HERITAGE ITEMS (DIN 4150, GROUP 3)	INDUSTRIAL AND HEAVY COMMERCIAL (BS 7385)	
Geotechnical investigations	Vibratory roller <50kN (1-2 tonne)	5m	11m	3m	15 to 20m
Track work (peak)	Vibratory roller <300kN (7-13 tonne)	15m	31m	8m	100m
Track tamping	Ballast tamper	5m	10m	3m	30m
Pedestrian bridge removal (Junee only)	Small hydraulic hammer: 300kg (5 to 12 tonne excavator)	2m	5m	1m	7m

Cosmetic damage assessment

Junee Yard

The Junee Yard CNVIS cosmetic damage impacts are summarised as:

- All nearby buildings are expected to fall outside the minimum working distance for cosmetic damage for vibratory rolling associated with peak track works *(W.005)*.
- That no buildings are within the minimum working distances for cosmetic damage for ballast tamping required for *W.007*.
- Junee Railway Station is within the cosmetic damage minimum working distance for light commercial structures during the use of the hydraulic hammer in *W.010*. It is noted that the pedestrian bridge being removed in *W.010* is located on the Junee Station platform in close proximity to the Junee Station building.

Olympic Highway

The Olympic Highway CNVIS cosmetic damage impacts are summarised as:

- All nearby buildings fall outside the minimum working distance for cosmetic damage during vibratory rolling (*W.003* and *W.006*) and ballast tamping (*W.008*).

Heritage structures

Junee Yard

The Junee Yard CNVIS heritage structures impacts are summarised as:

- The Junee Railway Station building, listed on the State Heritage Register, falls within the minimum working distances for residential and light commercial buildings when using a hydraulic hammer during W.010.

Olympic Highway

The Olympic Highway CNVIS heritage structures impacts are summarised as:

- All heritage structures identified are located outside the minimum working distances for cosmetic damage. Therefore, vibration impacts to heritage structures are not expected.

Human comfort assessment

Junee Yard

The Junee Yard CNVIS human comfort impacts are summarised as:

- That receivers within close proximity of the works areas have the potential to fall within the human comfort minimum working distances when vibratory rollers are in use nearby in *W.004*. When a trench roller (vibratory) is in use during *W.003*, all receivers fall outside the human comfort minimum working distances.
- The closest residential receivers fall within the human comfort minimum working distance for track tamping (*W.007*). The commercial structures and residences identified within the minimum working distances have been previously exposed to track tamping activities during standard periodic maintenance of the track.
- That the small areas of the Junee Railway Station buildings, either side of the pedestrian bridge, fall within the human comfort minimum working distance when a small hydraulic hammer is used during *W.010*.
- The occupants of buildings discussed above may be able to perceive vibration impacts at times when vibration-sensitive equipment is in use nearby. Where impacts are perceptible, they would likely only be apparent for relatively short durations when vibration intensive equipment is in use nearby.

Olympic Highway

The Olympic Highway CNVIS human comfort impacts are summarised as:

- Receivers within close proximity to the W.003 and W.006 work areas have the potential to fall within the human comfort minimum working distances and occupants of these buildings may be able to perceive vibration impacts at times when vibratory rollers are in use nearby. Where impacts are perceptible, they would likely only be apparent for relatively short durations when vibration intensive equipment is in use nearby.
- All receivers are outside the human comfort minimum working distance during track tamping (*W.008*).

Cumulative impacts

There is potential for cumulative construction impacts from multiple construction activities being completed in different areas of the Proposed Change.

As noted in the CNVIS, since the construction scenarios required for various stages of the Proposed Change would generally require similar items of equipment, concurrent construction work being completed near to a particular area could theoretically increase the worst-case noise levels in this report by around 3 dB (i.e., a logarithmic adding of two sources of noise at the same level).

The likelihood of worst-case noise levels being generated by two different work activities at the same time is considered low and rather than increase construction noise levels, the impact of concurrent work would generally be limited to a potential increase in the duration, and annoyance, of noise impacts on the affected receivers. In practice, construction noise levels in any one location would vary and would be frequently much

lower than the worst-case scenario assessed due to construction staging moving work around within the study area and, in many cases, only a few items of equipment being used at any one time.

The Olympic Highway roundabout line marking (SLR NPT Appendix B) will not be undertaken concurrent to any other activities however it is possible that the Kemp St compound (EIS approved) will be operating and therefore the SLR NPT in Appendix B has assessed the proposed line marking concurrent with compound operations (i.e. generator and lighting towers).

4.3.4 Conclusion

Feasible and reasonable management and mitigation measures will be implemented as required to minimise noise, vibration and cumulative impacts for the scope of works as per the Proposed Change.

No additional, specific mitigation measures are required by the Junee Yard CNVIS, Olympic Highway CNVIS or Olympic Highway Roundabout line marking SLR NPT (Appendix B). Notwithstanding this, all applicable mitigation measures in the CoAs and UMMs will be implemented, with any identified additional mitigation measures outlined in Table 4-12. In alignment with the CoAs, the controls detailed in the CNVISs will be adhered to which include the following but not exhaustive list:

For mitigation of potential airborne and ground-borne noise impacts at both Junee Yard, Olympic Highway and Olympic Highway Roundabout:

- With regards to wakening events, further detail around the specific OOHW, (e.g. duration and justification) will be identified and mitigated through the OOHW permit.

For mitigation of potential vibration impacts on human comfort at both Junee Yard and Olympic Highway:

- Vibration safe distances for vibration intense activities will be applied and monitored with feasible and reasonable construction vibration mitigation measures to be applied where vibration intensive work is required within the minimum working distances.

For mitigation of potential vibration cosmetic damage at Junee Yard and Olympic Highway:

- Offset distances from specific vibration intensive plant to the nearest receivers and building construction should be confirmed before commencing vibration intensive work during construction.
- Before commencement of any work, a structural engineer must undertake condition surveys of all building, structures, utilities and the like identified as being at risk of damage. For this CNVIS, conditions surveys are recommended for Junee Railway Station.
- After completion of construction, condition surveys must be undertaken by a structural engineer of all items for which pre-condition surveys were undertaken. The results of the surveys must be documented in a Condition Survey Report for each item surveyed. Copies of Condition Survey Reports must be provided to the landowners of the items surveyed, and no later than one month before the commencement of construction and three months following the completion of construction.

For mitigation of potential vibration impacts on heritage structures at both Junee Yard and Olympic Highway:

- As per CoA E80, vibration testing must be undertaken before and during vibration generating activities that have the potential to impact on heritage items to identify minimum working distances to prevent cosmetic damage. Advice must be sought on methods and locations for installing equipment as per CoA E81.
- If other vibration intensive activities are required within minimum working distances to heritage structures, a building condition assessment should be undertaken of the heritage item/s to assess if they are considered to be sensitive to vibration prior to vibration work commencing.

For potential cumulative impacts at both Junee Yard and Olympic Highway:

- As per CoA E72 and E83, feasible and reasonable steps will be taken to consult and coordinate with other construction Projects when they become aware of them and if they have the potential to impact the same

receivers concurrently, to minimise cumulative impacts of noise and vibration and maximise respite for affected sensitive receivers.

4.4 Aboriginal Heritage

4.4.1 Existing environment

An Aboriginal Heritage Assessment (AHA) for the Proposed Change has been included in the NAHA (Appendix B).

4.4.2 Impact assessment

An Aboriginal Heritage Assessment (AHA) for the Proposed Change An Aboriginal Heritage Assessment (AHA) for the Proposed Change has been included in the NAHA (Appendix B). The Proposed CIZ extension does not encroach on the EAD identified Aboriginal item *A2I-2 Junee IF.* The site walk conducted for the NAHA, which includes the AHA assessment, did not identify the presence of any additional items.

4.4.3 Conclusion

For Aboriginal heritage, the Proposed Change does not further encroach on the identified item and does not identify additional items within the CIZ extensions. It is concluded in the NAHA that Application of assessment for Aboriginal heritage via the Due Diligence Code has determined that the proposed CIZ extension is unlikely to harm Aboriginal objects or landscape features with archaeological sensitivity.

On this basis, there is no change in impact on Aboriginal heritage from the Proposed Change. All existing mitigation measures will be applied to the works, if approved.

4.5 Non-Aboriginal Heritage

4.5.1 Existing environment

A non-Aboriginal Heritage Assessment (NAHA) for the Proposed Change has been developed (Appendix B). The Proposed Change intersects or is adjacent to the curtilage for the heritage items shown in Figure 2-1 and Figure 2-2.

4.5.2 Impact assessment

A non-Aboriginal Heritage Assessment (NAHA) for the Proposed Change has been developed. Table below replicates NAHA Table 3-1 of impacts to heritage items outside of the CIZ extension.

Table 4-6: NAHA replicated Table 3-1 - Impacts to heritage items outside of the CIZ extension

AFFECTED REGISTERED HERITAGE ITEMS	ASSESSMENT SUMMARY
Court house, Junee LEP I3	Item I3 is approximately 50 m from the CIZ extension. It is assessed that impacts to this structure will be temporary and negligible.
Former ‘Westpac Bank, Junee LEP I4	Item I4 is approximately 90 m from the CIZ extension. It is assessed that impacts to this structure will be temporary and negligible.
‘Commercial’ Hotel, Junee LEP I5	Item I5 is approximately 96 m from the CIZ extension. It is assessed that impacts to this structure will be temporary and negligible.
Former ‘Loftus’ Hotel, Junee I7	Item I7 is approximately 27 m from the CIZ extension. Works in this area involve traffic management only, it is assessed that impacts to this structure will be temporary and negligible.

'Junee' Hotel, Junee LEP I11	Item I11 abuts the CIZ extension. Works along Broadway Street involve traffic management only, therefore it is assessed that impacts to this structure will be temporary and negligible.
Former general store, Junee LEP I12	Item I12 abuts the CIZ extension. Works along Broadway Street involve traffic management only, therefore it is assessed that impacts to this structure will be temporary and negligible.
Former solicitors' office, Junee LEP I13	Item I13 abuts the CIZ extension. Works along Broadway Street involve traffic management only, therefore it is assessed that impacts to this structure will be temporary and negligible.
Australia and New Zealand Banking Group Bank, Junee LEP I14	Item I14 abuts the CIZ extension. Works along Broadway Street involve traffic management only, therefore it is assessed that impacts to this structure will be temporary and negligible.
Former 'Broadway' Hotel, Junee LEP I15	Item I14 is approximately 190 m from the CIZ extension. Works along Broadway Street involve traffic management only, therefore it is assessed that impacts to this structure will be temporary and negligible.
'Broadway Stores Group', Junee LEP I16	Item I16 is approximately 37 m from the CIZ extension. Works along Broadway Street involve traffic management only, therefore it is assessed that impacts to this structure will be temporary and negligible.
Former 'Jadda Centre, SHR 01687 Junee LEP I2	Item I2 is approximately 59 m from the CIZ extension. Works along Broadway Street involve traffic management only, therefore it is assessed that impacts to this structure will be temporary and negligible.
Junee Public School, s170	Junee Public School is approximately 90 m from the CIZ extension. It is considered that the item will not be impacted by the temporary works involved with the proposal.

4.5.3 Conclusion

It is concluded in the NAHA that as the proposed works are primarily temporary disturbances during construction, it has been assessed that impacts to the heritage items outside of the CIZ extension will be negligible. This assessment further concludes that based on the nature of these impacts heritage fabric and values within LEP, SHR and Commonwealth heritage curtilages will not be impacted.

The following mitigation measures have been prescribed:

- Based on the conclusion that the proposed works through vibration have the potential to impact moveable relics within the Junee Railway Station and the refreshments room, it is recommended that vibrations be monitored, and the moveable relics be inspected by a heritage specialist prior to construction. If deemed necessary by the heritage specialist, some items may be temporarily relocated within the Railway Yard or moved to the Junee Roundhouse Railway Museum per CoA NAH10. If temporary relocation occurs, a Standard Exemption Record Keeping Form1, under Standard Exemption 17: Temporary relocation of moveable heritage items, should be prepared and kept by Martinus / ARTC Inland Rail.
- OzArk identified two areas of potential archaeological deposit: the old shunting lines and depot potential archaeological area; and the 1878 and 1883 Railway Stations and Refreshment Rooms archaeological area should be demarcated by an asset protection zone. It has also been assessed that the old shunting lines and depot archaeological area hold heritage values and therefore should be demarcated by an asset protection zone and a 'protection wafer' of geofabric topped with quarried material be placed at J2-005 to prevent harm to potential heritage fabric/ archaeology.

4.6 Biodiversity

4.6.1 Existing environment

The Proposed Change is located in the NSW South-western Slopes bioregion, within the Inland slopes subregion. The Proposed Change is located within or adjacent to the existing rail corridor in areas that have

been predominantly cleared. The landscape in the area surrounding the proposal has been heavily fragmented by development, with existing habitat connectivity limited to creek lines and road reserves.

A Biodiversity Assessment Report Memo (BARM) (East Coast Ecology, June 2025) (Appendix) Chas been prepared for the Proposed Change areas, referenced as 'Subject Land'. The areas in the BARM correspond to area labels in Table 2-1 and in Figures 2-3 to 2-5.

Vegetation communities

Due to historical agricultural, infrastructure, residential and industrial development within the Subject Land, and specifically a lack of native and/ or diagnostic species for candidate PCTs, the following vegetation community types described by WSP (2024) were assigned:

- Miscellaneous Ecosystems – 'Ornamental Plantings' (MEOP)
    - Due to the Subject Land's historical and ongoing residential and community use through the Town of Junee, much of the vegetation is comprised of ornamental native and exotic species planted for aesthetic purposes and was therefore determined to have limited ecological function (WSP, 2024) (Figure 5 - Figure 7 of the BARM) Ornamental Plantings includes areas that are not consistent with the definition of a PCT and are not required to be assessed for ecosystem credits, per Section 9.3 of the BAM (DPE, 2020a).
    - MEOP's extent is approximately 1.31 ha.
- Miscellaneous Ecosystems – 'Highly Disturbed areas with no or limited Native Vegetation' (MEHD)
    - Due to a long history of disturbance from agricultural, infrastructure (rail and road) and industrial use, the Subject Land within the town of Junee is comprised of no or limited native species and is dominated by exotic species, and provides limited ecological function (WSP, 2024) (Figure 5 - Figure 7) Highly Disturbed areas with no or limited native vegetation includes areas that are not consistent with the definition of a PCT and are not required to be assessed for ecosystem credits, per Section 9.3 of the BAM (DPIE, 2020a).
    - MEHD's extent is approximately 3.57 ha.
- Poor Condition - PCT 277: Blakely's Red Gum - Yellow Box grassy tall woodland of the NSW South Western Slopes Bioregion (PCT 277)
    - The vegetation within this zone was heavily modified with few individual remnant *Eucalyptus albens, Eucalyptus melliodora* and *Acacia* sp.
    - PCT 277's extent is approximately 0.0061 ha (No Impact)

These vegetation community types are consistent with vegetation types described in the approved BDAR.

Threatened flora

As noted in the BARM (Appendix C), BioNet and Protected Matters Search Tool (PMST) searches revealed seven threatened flora species occur, or have the potential to occur, within a 5km radius of the Proposed Change area.

The results from the site assessment, including targeted flora surveys and habitat assessment, were used to assess each species' likelihood of occurrence within the Subject Land. After carrying out the assessment, the assessor determined that the habitat is substantially degraded such that all potential threatened flora species are unlikely to occur within the Subject Land.

Threatened fauna

As noted in the BARM (Appendix C), BioNet and PMST searches revealed thirty threatened fauna species occur, or have the potential to occur, within a 5km radius of the Proposed Change area.

The degraded vegetation within the Subject Land would only provide low-quality foraging habitat for threatened species. There was no breeding habitat identified (in the form of hollow-bearing trees, rocky outcrops/ caves, waterbodies, large trees or human-made structures).

Due to the absence of suitable habitat constraints and/ or the degraded nature of potential habitat and historical clearing, it was determined that the habitat is substantially degraded such that potential threatened fauna are unlikely to utilise the Subject Land.

Migratory species

As noted in the BARM (Appendix C), database searches revealed seven migratory terrestrial species, or their habitat, are known to occur within the Proposed Change area. These species are unlikely to occur due to the lack of suitable habitat in the Proposed Change area (i.e. ornamental tree dominated) and these species do not breed in Australia.

4.6.2 Impact Assessment

The impact has been assessed in the BARM (Appendix C). The proposed activity, inclusive of the proposed CIZ extensions, will require the removal/ trimming of a total of 4.94ha comprising of:

- 1.31ha of MEOP, and
- 3.57ha of MEHD.

An area of 0.061ha has been assigned as PCT 277 and will not be impacted by the Proposed Change.

All vegetation proposed for removal provides low-quality foraging habitat for threatened fauna. Within the context of the surrounding landscape, it is unlikely this vegetation would be utilised given the presence of superior habitats adjoining the Subject Land, and in the broader landscape. Further, it is considered unlikely that any threatened species would occupy the Subject Land due to evidence of ongoing disturbance (railway, roads, residential housing). As such, no threatened flora or fauna are likely to be significantly impacted.

4.6.3 Conclusion

The BARM (Appendix C) concludes that there would be no impacts to threatened species, populations or ecological communities are expected as a result of the Proposed Change. Although outside the assessed construction boundary for the Project, the biodiversity impacts are considered consistent with the initial assessment (WSP, 2023), and no further offsets (ecosystem or species) would be required subject to the implementation of all applicable mitigation measures in the CoAs and UMMs, and with any identified additional mitigation measures outlined in Table 4-12.

4.7 Flood risk

4.7.1 Existing environment

Flooding

The Proposed Change is located within the Murrumbidgee catchment of the Murray-Darling Basin. The Murrumbidgee catchment extends from the Kosciuszko National Park in eastern NSW to Balranald in western NSW, with inflows primarily sourced from the Great Dividing Range (EIS, Chapter 18).

The frequency of flood events is generally referred to in terms of their annual exceedance probability (AEP). For example, for a 5% AEP flood, there is a five per cent probability (or a one in 20 chance) that there would be floods of a greater magnitude in any given year. For a 1% AEP flood, there is a one per cent probability (or a one in 100 chance) that there would be floods of greater magnitude each year. The probable maximum flood (PMF) is the largest flood that could be expected to occur at a particular location, usually estimated from probable maximum precipitation.

4.7.2 Impact Assessment

Flooding

The Proposed Change areas are partially located within flood prone land, with existing flood conditions shown in Table 4-7: Existing flood conditionsTable 4-7 below.

Table 4-7: Existing flood conditions

ENHANCEMENT SITE	EXISTING FLOOD CONDITIONS	DRAINAGE	FLOOD RISK WITHIN AND AROUND THE ENHANCEMENT SITE FOR EVENTS UP TO THE 1% AEP	PMF FLOOD DEPTH
Junee Station Pedestrian bridge	▸ Not located on flood-prone land	▸ No information available	▸ Not affected	▸ No information available
Junee Yard clearances	▸ Not located on flood-prone land	▸ Five box culverts under the rail corridor conveying Lower Butlers Gully ▸ No other formal drainage infrastructure	▸ Not affected	▸ No information available
Olympic Highway underbridge	▸ Overland flooding adjacent to the rail corridor in the 1% and 5 % AEP ▸ No flood impacts within the rail corridor	▸ Three box culverts under the rail corridor conveying Rock Creek	▸ 5% AEP and greater flood events	▸ No information available

The Olympic Highway enhancement site is affected by local overland flooding. Three box culverts under the rail corridor conveying Rock Creek are present within the enhancement site. At the Olympic Highway underbridge road drainage at the low point under the bridge joins to this channel to convey stormwater runoff towards Rock Creek and away from the enhancement site. The Proposed Change, the extension of the CIZ, would not impact these existing drainage structures and therefore, no increase to flood risk is anticipated.

Construction activities on flood-prone land, including earthworks, concrete works, compounds, stockpiles, etc, have the potential to temporarily affect flooding behaviour. Without the implementation of appropriate management measures, potential impacts include (EIS, Chapter 18):

- cause damage to construction sites, machinery, plant and equipment
- detrimentally impact downstream watercourses through increased flow rates in drainage lines, changes in scour, bank erosion and transport of sediments
- obstruct the passage of floodwater and overland flow, which could exacerbate existing flooding conditions and pose a safety risk to the public.

The potential construction impacts at the Olympic Highway underbridge and Junee Yard enhancement site include:

- Construction stockpiles and materials at this enhancement site may be impacted in a flood event
- Temporary redistribution of overland flows and stormwater due to construction infrastructure.

The Proposed Change is required to improve access, facilitate safe manoeuvring and staging, provide laydowns and does not require any major earthworks or other construction activities that would substantially alter the flood regime at the Olympic Highway underbridge, Junee Yard clearances or Junee Station pedestrian bridge sites.

Water quality

Butlers Gully, an ephemeral tributary of Houaghans Creek, intersects the approved construction footprint at the Olympic Highway enhancement site, however, this watercourse is not considered a sensitive receiving environment.

4.7.3 Conclusion

Construction activities at the Proposed Change areas would be short term and prepared with consideration of flooding behaviour. Where temporary obstruction of overland flows or drainage systems cannot be avoided, further consideration of flood risk would be undertaken to develop the staging of works to ensure proper management of a flood event at all stages of construction. The Proposed Change area has been designed to minimise the duration of onsite work in watercourses, which would enable increased flexibility when scheduling works around forecast rain periods (refer to EIS Chapter 8).

The Proposed Change would not impact the Project's ability to implement the Soil and Water CEMP Sub-plan and therefore would not result in an increase of impact on surface water quality compared with that which was assessed in Chapter 18 and Technical Paper 11 of the EIS. As such, construction would not result in any long-term water quality impacts in the study area and would be unlikely to cause changes to the water quality environment against the *NSW Water Quality Objectives and Basin Plan 2012* objectives, identified in EIS section 18.2.2 and in Technical Paper 11: Hydrology, flooding and water quality.

4.8 Soils and contamination

4.8.1 Existing environment

The Proposed Change areas are situated at an elevation of about 300 to 320m above the Australian Height Datum (AHD). Existing soil characteristics within the Proposed Change area are shown in Table 4-8 below.

Table 4-8: Existing soil characteristics

ENHANCEMENT SITE	LANDSCAPE	SOIL	CHARACTERISITICS
Junee Station Pedestrian bridge and Junee Yard clearances, and Olympic Highway underbridge	▸ Currajong soil landscape	▸ Deep (>100 cm) mottled red and brown ▸ Moderately deep to deep (>50 cm), brown and red Dermosols on mid-to-lower slopes ▸ Deep (>100 cm), imperfect to moderately well-drained mottled red, brown and yellow Chromosols on lower slopes ▸ Deep (>100 cm), imperfectly drained brown and red Sodosols on some lower slopes, in drainage depressions and along creek flats.	▸ Localised salinity, poor drainage, high run-on, sheet and gully erosion hazard, high erodibility of subsoils, acidity of topsoils, and sodicity/dispersibility of subsoil.

Saline soils

The Proposed Change is located on land mapped as having 'low' land salinity hazard.

Acid sulfate soils

The Proposed Change is located within areas described as having a low probability of acid sulfate soils (ASS).

Naturally acidic soil

The Proposed Change is located on land that could be impacted by naturally acidic soils.

Contamination

The Proposed Change is located within an existing rail corridor, which is considered to contain a general level of risk associated with contamination from historical development and activities associated with its operation. A range of sites adjacent to the rail corridor that would be considered to have associated contaminated risk were identified, including agricultural land. The sources for these general contamination risks include (EIS, Chapter 20):

- fill used in construction of the existing rail line, which may be contaminated EIS weed-suppression activities
- buildings potentially containing hazardous materials
- rail line ballast potentially containing heavy metals and other contaminants
- contamination from maintenance activities undertaken at sidings and near silos or other areas
- use of chemicals on agricultural land
- machinery storage and maintenance, refuelling and spray rig filling, agricultural sheds and silos

The Proposed Change areas are located in proximity to Areas of Environmental Concern (AEC) noted as AEC 42, AEC 43, AEC 44, AEC 45 and AEC 46. Description of the AECs and potential contaminants of concern are shown in Table 4-9 below and in Figure 4-2.

Table 4-9: Description of AEC and potential contaminants of concern

ENHANCEMENT SITE	AEC	DESCRIPTION OF AEC	POTENTIAL CONTAMINANTS OF CONCERN
Junee Station and Surrounds	AEC 42	Potential ACM around and within building	TRH, BTEX, PAHs, asbestos, lead containing dust and/or paint
	AEC 43	Dumped metals drums, sleepers and scrap metal	TRH, BTEX, PAHs, asbestos, lead containing dust and/or paint
	AEC 44	Ballast Stockpiles	Heavy metals, TRH, BTEX, PAHs, asbestos, lead containing dust and/or paint
	AEC 45	Mobil service station	TRH, BTEX, PAHs and/or lead
Olympic Highway underbridge	AEC 46	Shell service station with drums labelled as cooking oil stored close to the tracks	TRH, BTEX, PAHs and/or lead

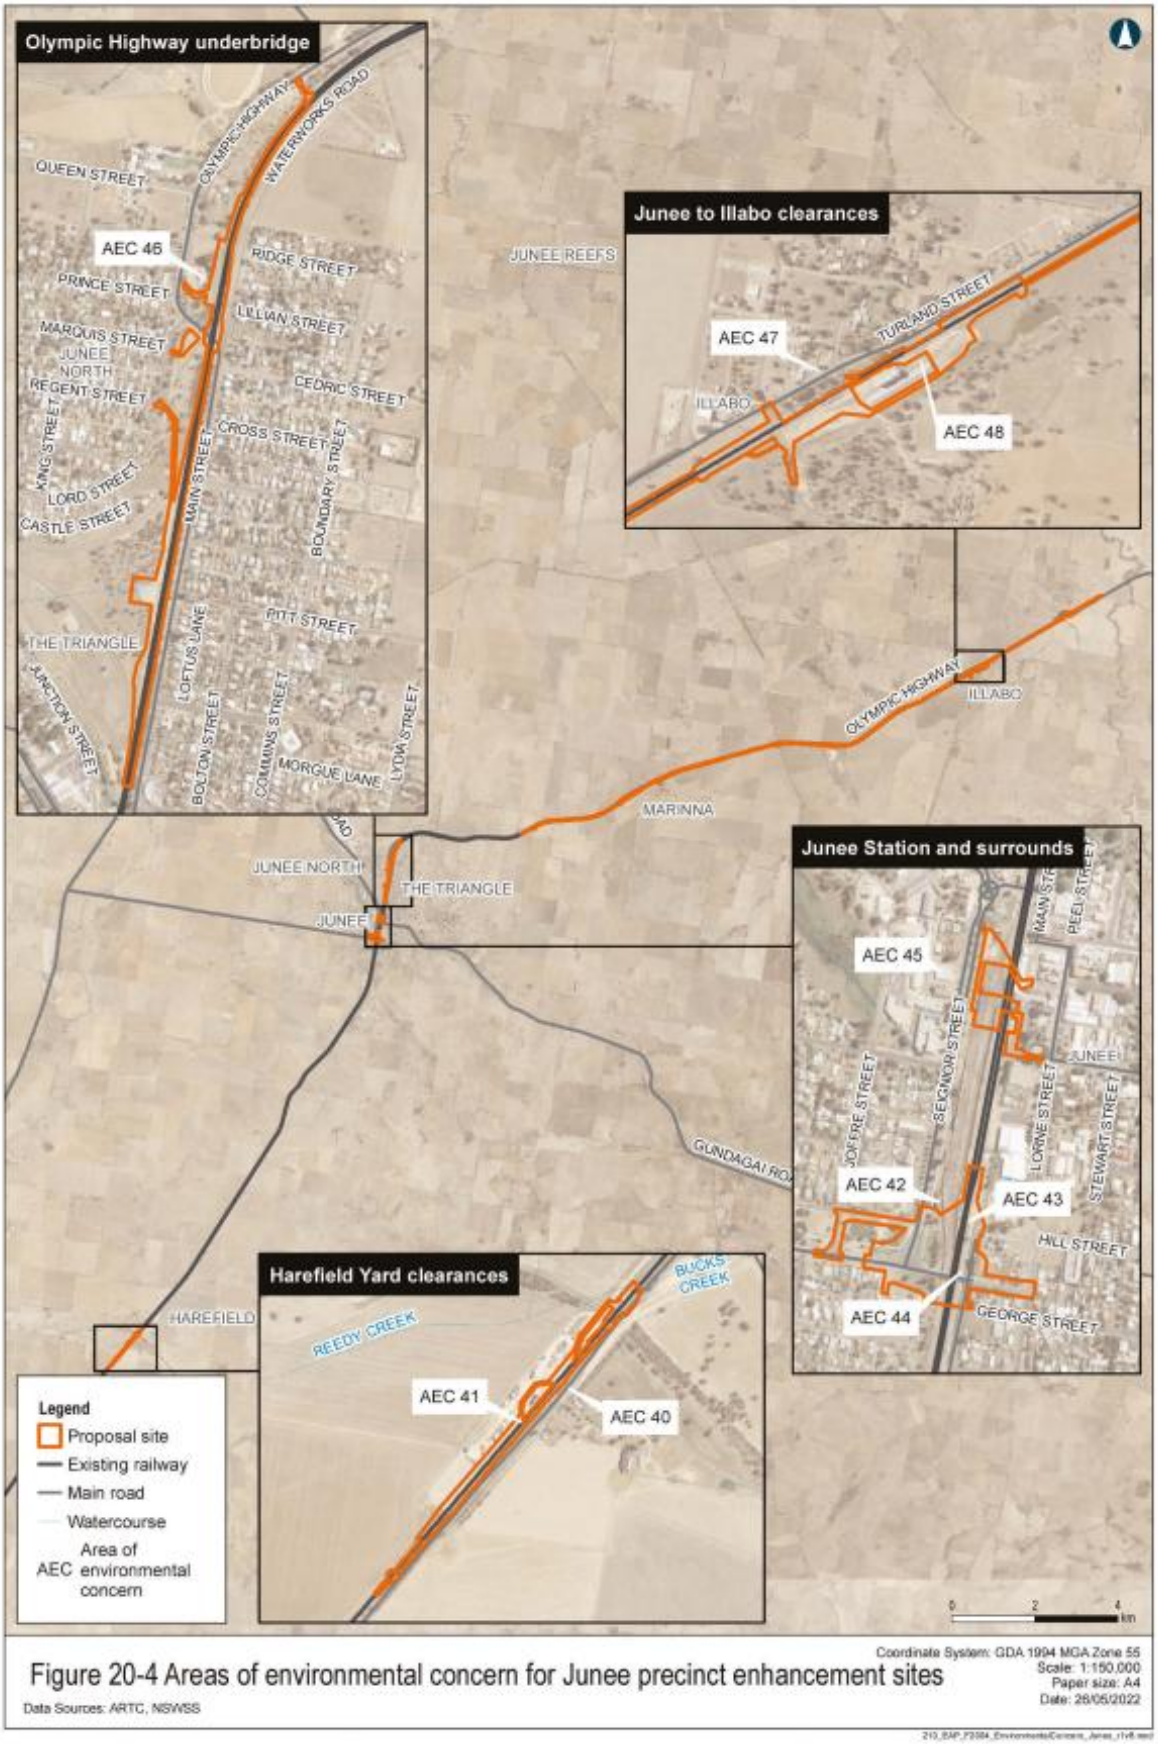

Figure 4-2: EAD showing AECs in relation to the Proposed Change

4.8.2 Impact Assessment

Excavation and ground disturbance activities would expose and disturb soils. If not adequately managed, this could result in (EIS, Chapter 20):

- erosion of exposed soil and stockpiled materials
- dust generation
- an increase in sediment loads entering the stormwater system and/or local runoff, and, therefore, nearby receiving waterways
- increase in salinity levels in soil
- ASS conditions
- mobilisation of contaminated sediments, with resultant potential for environmental and human health impacts

Soil erosion

Construction activities in the Proposed Change areas would temporarily expose the natural ground surface and sub-surface through the removal of vegetation, overlying structures (such as existing roads) and excavation. The exposure of soil to runoff and wind can increase soil erosion potential; particularly, where construction activities are undertaken in soil landscapes characterised by dispersive soils, given their susceptibility to erosion.

Saline soils

Excavation of salt-affected soil from deeper horizons are likely to lead to an increase in salinity presence at the surface. Excavation of these areas are likely to disrupt the existing aboveground and sub-surface drainage patterns, allowing salts to be brought to the surface in seeps or to accumulate in zones of evaporation. Soil disruption associated with excavations or cuttings into the landscape for the proposal, footings, construction compounds, bridges or levelling purposes are potential activities that could lead to increased salinity risk.

Contamination

There is a general contamination risk present within the Proposed Change areas, based on their general setting within an existing rail corridor and land uses that occur in and adjacent to these areas. The Proposed Change at Junee Yard excludes AEC 42 (potential ACM around and within building), this exclusion zone will be maintained for the duration of construction.

As noted in the EIS (Chapter 20) the risk of contamination within the Proposed Change area is considered to be low within the context of the continuing railway land use; however, some discrete areas of medium risk have been identified, such as areas of waste within the rail corridor, fill used in the construction of the existing rail line and structures containing hazardous materials (such as lead paint and asbestos).

Based on the intensity of historical activities observed within the rail corridor, including the presence of operational facilities, development in the surrounding area, and the proposed change area's proximity to the Junee Yard train station, the proposed change area is considered to have a higher likelihood of contamination being present. Further investigation of the area would confirm the requirement for any additional management actions. A Sampling, Analysis, and Quality Plan (SAQP) is currently being developed for all sites across the alignment and would be utilised to inform the scope of any site investigations required prior the commencement of work.

4.8.3 Conclusion

Construction activities at the Proposed Change area would be short term and would be prepared with consideration of the existing soils and contamination characteristics of the area.

All applicable mitigation measures in the CoAs and UMMs will be implemented, with any identified additional mitigation measures outlined in Table 4-12.

4.9 Air quality

4.9.1 Existing environment

Regional air quality is mainly influenced by rural activities, industrial activities, vehicle emissions, railway operations, power generation, waste management and extraction activities. Dust from paved and unpaved roads, and domestic solid and liquid fuel burning in the region, also contribute to the local air shed.

As noted in the EIS (Chapter 22), air quality data has been sourced from a monitoring station at Junee, with the results summarised in Table 4-10 below, alongside the air quality impact assessment criterion for each pollutant specified in the Approved Methods for the Modelling and Assessment of Air Pollutants in New South Wales (NSW EPA, 2016).

Table 4-10: Background air quality

MONITORING STATION	POLLUTANT	AVERAGING PERIOD	AIR QUALITY IMPACT ASSESSMENT CRITERIA	YEAR[2]				
				2016	2017	2018	2019	2020
Junee[1]	Total suspended particles (g/m^3)	Annual	90	**292**	**358**	**1,331**	**3,523**	**9,018**

1. The Junee air quality monitoring station only measures TSP (DustTrak). It is not a National Environment Protection Measure (NEPM) performance monitoring station and does not conform to Australian Standards. Levels should be viewed as indicative only.

2. Exceedances of the air quality assessment criteria are shown in bold.

4.9.2 Impact Assessment

Dust emissions

The following activities in the Proposed Change have the potential to generate dust during construction (EIS, Chapter 22):

- vegetation clearing and grubbing
- installation of temporary infrastructure and site compound
- earthworks such as rail formation works
- civil works at road and pedestrian bridges
- dirt, mud, or other materials tracked onto a paved public roadway by a vehicle leaving a construction site (generally referred to as egress)
- erosion of unsealed surfaces
- materials handling and loading at laydown areas, and vehicle movements on unsealed roads/surfaces.

4.9.3 Conclusion

The Proposed Change impacts on air quality have been deemed negligible to high prior to any mitigation measure implementation (EIS, Chapter 22). Following the implementation of appropriate mitigation measures, the residual air quality impacts would be reduced to negligible to low risk and short-term.

All applicable mitigation measures in the CoAs and UMMs will be implemented, and any additional mitigation measures are outlined in Table 4-12.

4.10 Landscape and visual

4.10.1 Existing environment

The Proposed Change area is located at the boundary of the upper slopes of the Southwestern Bioregion, characterised by steep, hilly and undulating ranges and granite basins, with open forests and woodlands.

A common feature of the landscape and visual catchment across the Proposed Change area is the operational rail corridor of the Main South Line. This corridor has been largely cleared of native vegetation and generally consists of ornamental vegetation and a few scattered trees.

Landscape character

The Junee Station and town centre is focused on the state heritage listed railway station, which 'is a key element in the streetscape of this part of Junee' (Heritage NSW, 2021) and forms the central part of Junee Heritage Conservation Area (Junee LEP). This area is a main arrival point for Junee and would be experienced by local residents and visitors to Junee. The station is a local landmark and is among a concentration of heritage character buildings and landscape features. This landscape is of local landscape sensitivity.

The Olympic Highway enhancement site is located within a low-density residential area in the north of the Junee town centre. The existing rail corridor continues north from the town centre elevated on an embankment and the Olympic Highway crosses the highway via an underbridge. The landform in this location is undulating with the landform rising to the east and northwest of the site. This area is experienced by a moderate number of road users on the Olympic Highway, recreational users of the linear parkland and local residents and their visitors within the surrounding residential areas. This area is of local landscape sensitivity.

Viewpoints

The following viewpoints were selected as representative of the range of views at the Proposed Change areas. The locations of these viewpoints are shown in Figure 4.4.

Viewpoint 24: View south from the Junee Railway Station platform

- This view along the rail corridor extending south from Junee Station, includes multiple tracks, gantries, signalling infrastructure, lighting poles and grassed rail corridor reserves containing transmission lines and other utilities. The Kemp Street bridge is visible in the centre middle ground of view, passing over the rail corridor and Edgar Street. Beyond the bridge, the undulating landscape of the fields to the south of the town can be seen, providing a scenic backdrop to this view. The residences to the east of the rail corridor (left of view) are located within the Junee Heritage Conservation Area (Junee LEP 2012). While this part of the rail corridor is part of June Station, a local and State heritage listed place, the built features unique to the station are not visible.
- This view is from the platform of the heritage listed Junee Station. This view would be seen from groups of rail users accessing the station and also adjacent residences. This view is of local visual sensitivity.

Viewpoint 25: View north along the Junee Station platform

- This view shows the southern approach to Junee town centre along the Seignior Street (Olympic Highway). The rail corridor is generally level with the street, with traditional low timber picket fencing and ornamental streetscape planting along the road. The State heritage listed railway station building and platforms are s visible from this location. The station is a 'key element in the streetscape' of Junee (OEH, 2009c) and part of Junee Heritage Conservation Area (Junee LEP 2012). The steel pedestrian bridge is located to the south of the station and can be seen from this location (partly obstructed by the train in this

view), however, it is not prominent and does not contribute substantially to the aesthetic value of the station precinct in views from this location. Freight trains can be seen in this view, passing in both directions through the station.

- This view is located within a heritage conservation area and contains several visual and landscape features such as the streetscape planting as well as several landmark buildings including the station building. This is a main route through town and would be seen by a large number of road users and from the commercial and residential properties to the west of Seignior Street. This view is of local visual sensitivity.

Viewpoint 26: View south along Seignior Street

- This view adjacent to the residences on Illabo Road, shows the rail corridor, as it passes over the Olympic Highway in the background of the view. The rail bridge is a simple steel truss structure with tinted concrete abutments. The rail corridor is located on an embankment, elevating it above the surrounding residential area. A linear open space can be seen in the middle and foreground of this view, between the rail corridor and Illabo Road. This parkland includes mature trees, grassed areas, and pathways. The trees within this parkland filters views to the rail corridor and freight trains that would be seen passing along the track. This view is from a heritage conservation area and includes an oblique view to the heritage listed station building and pedestrian bridge. This is a location where locals would gather to access passenger trains and is a point of arrival for visitors to Junee. This is of local visual sensitivity.

Viewpoint 27: View northeast from Illabo Road

- This view adjacent to the residences on Illabo Road, shows the rail corridor, as it passes over the Olympic Highway in the background of the view. The rail bridge is a simple steel truss structure with tinted concrete abutments. The rail corridor is located on an embankment, elevating it above the surrounding residential area. A linear open space can be seen in the middle and foreground of this view, between the rail corridor and Illabo Road. This parkland includes mature trees, grassed areas, and pathways. The trees within this parkland filters views to the rail corridor and freight trains that would be seen passing along the track.
- This view is generally experienced by local residents within the residences on Illabo Road and from recreational users of the parkland which would attract users from the surrounding residential area. This view is of local visual sensitivity.

Viewpoint 28: View southwest from the Olympic Highway rest stop, Illabo

- This view from Waterworks Road shows the rail corridor as it becomes level with the adjacent residential areas to the east of the corridor. The rail is set within a narrow grassy rail corridor, with no trees or shrubs, allowing clear views to the track and the Olympic Highway underbridge can be seen in the middle ground of view. The elevated areas to the west of Junee form an attractive background of the view, with predominantly low-density leafy residential development. Power poles and wires follow the rail corridor and there would be passenger and single stacked freight trains visible passing along the rail corridor, set below the ridgeline in the background.
- This view is experienced by local residents within the adjacent residential area, which includes existing dwellings and new lots. This view is of neighbourhood visual sensitivity.

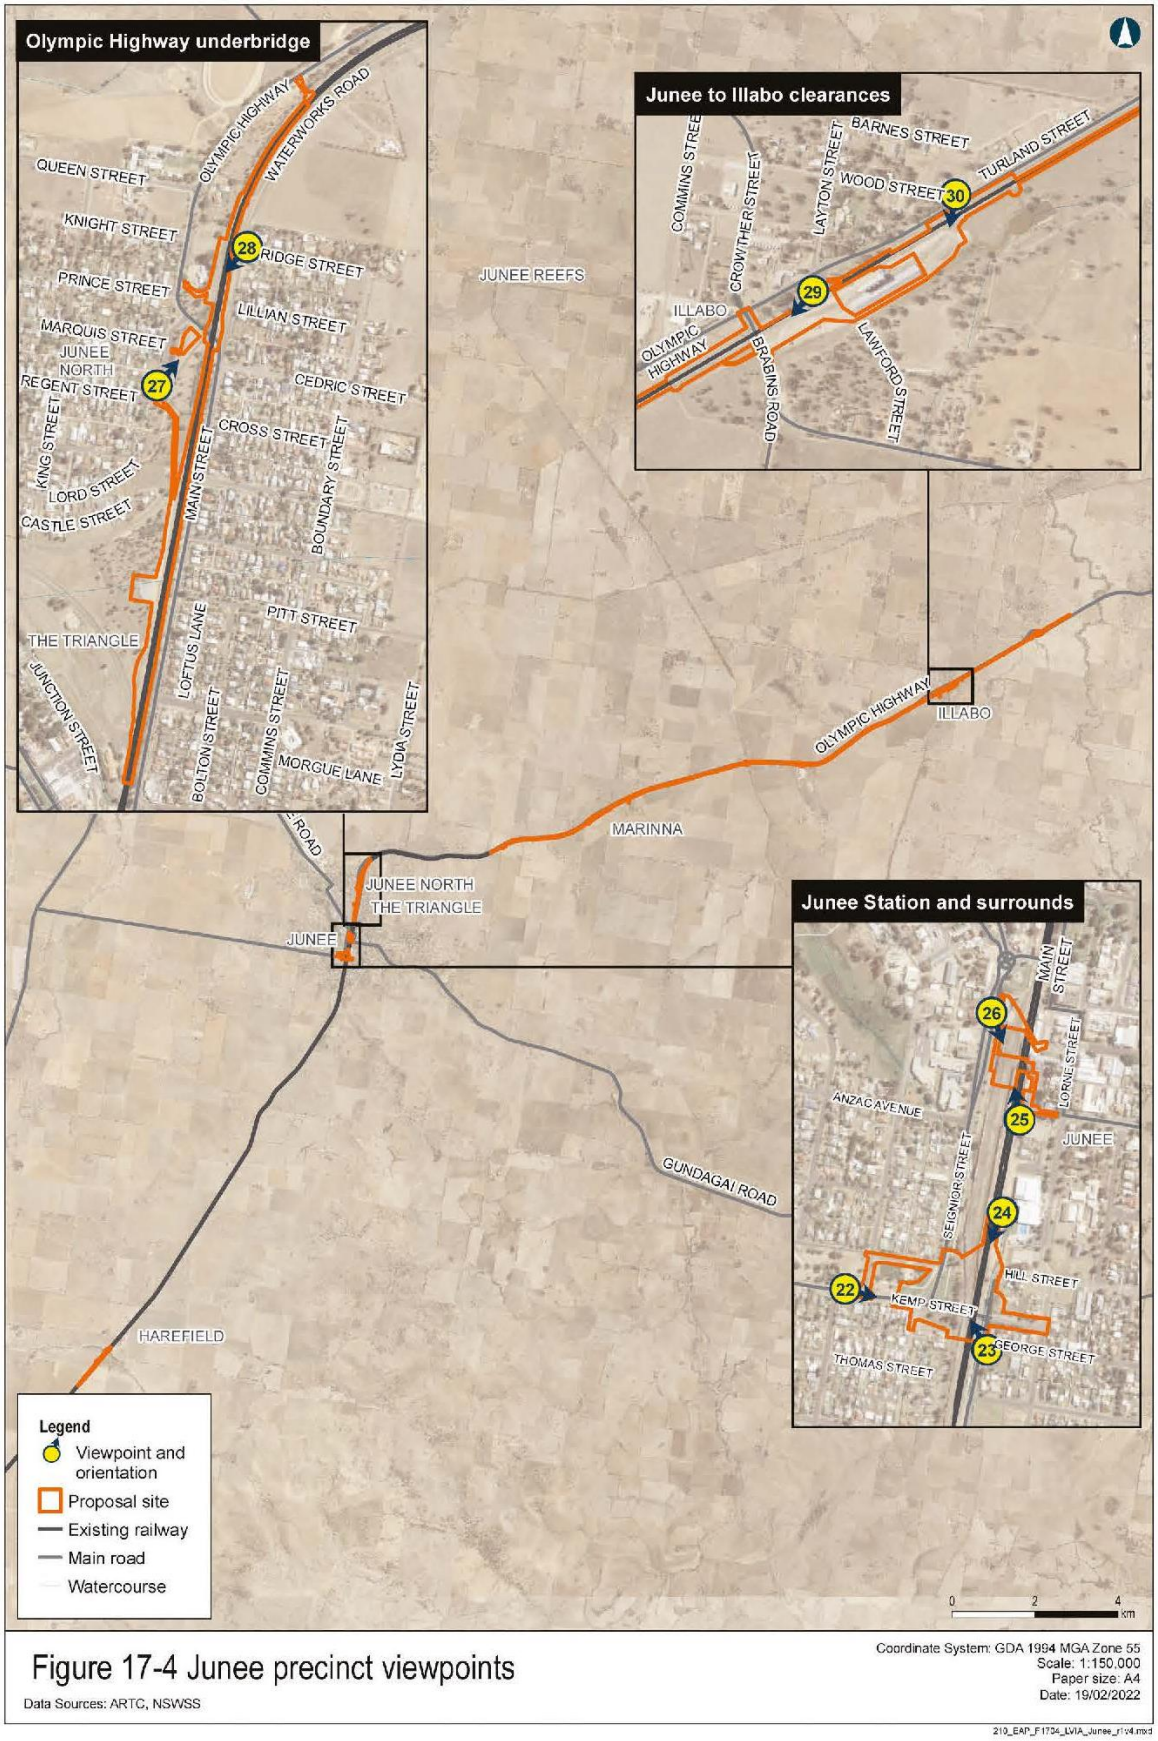

Figure 4-3: EAD showing viewpoints in relation to the Proposed Change

4.10.2 Impact Assessment

Landscape character

Junee Station and town centre

- During construction much of the work would be undertaken within the rail corridor. There would be access via Seignior Street and a compound established to the southeast of the station on an area of exiting car parking. The works would not be substantial at this site, being mainly the removal of the redundant pedestrian bridge. These works would be set back from Lorne Street, and the main entry to the station so that there would not be any disruption to access to or within the station and permeability in the centre of town. The east west connectivity across the rail corridor would not be altered as the existing pedestrian bridge is not in use and connects to a redundant platform. Overall, there would be a negligible magnitude of change and a negligible landscape impact during construction.

Olympic Highway underbridge

- There would be construction undertaken within the rail corridor elevated above and level with the adjacent residences along the eastern side of the rail corridor. There would be laydown areas within the open space to the west of the rail corridor and set back from the residential properties to the west. This work would temporarily reduce the area of open space within the linear parkland and impact access through the park and amenity of this parkland for recreational use. While this construction activity would alter the character of the rail corridor and adjacent open space, there would not be a direct impact upon the existing open space and trees. Overall, there would be a moderate magnitude of change to this landscape and a moderate adverse landscape impact during construction.

The proposed construction boundary changes are generally within and adjacent to the rail corridor resulting in a low magnitude of change and a negligible landscape impact during construction and are therefore consistent with the impacts assessed in the EAD.

Viewpoints

The Proposed Change areas would result in a moderate visual impact to viewpoints

Viewpoint 24: View south from the Junee Railway Station platform

- There would be yard clearances work visible within the corridor near the bridge. Work to demolish and construct the new bridge would be visible largely unobstructed along the rail corridor. The use of large equipment such as piling rigs and cranes would be prominent, rising above the surrounding residential areas and trees. The gantries, in the middle ground of this view, would also be replaced. The Proposed Change would extend the construction impact zone throughout the rail corridor visible from this viewpoint. Overall, due to the distance, there would be a low magnitude of change during construction, and a minor adverse visual impact.

Viewpoint 25: View north along the Junee Station platform

- There would be a construction compound established to the east of the rail corridor on the existing carpark (right of view). Works to remove the existing pedestrian bridge would be seen to the west (left of view) within the rail corridor. This would include the use of equipment such as cranes and heavy vehicles. There would be no removal of vegetation required to undertake work in this area. The Proposed Change would extend the construction footprint within the rail corridor past the viewer to the south. Overall, this would result in a moderate magnitude of change, and a moderate visual impact during construction.

Viewpoint 26: View south along Seignior Street

- Construction vehicles would access the site via Seignior Street (left of view) and construction traffic would be seen in the middle ground of this view. The construction footprint would extend across the rail corridor towards the viewer and the removal of the existing station pedestrian bridge and works to realign of the track would be seen from this location. The Proposed Change would extend the construction footprint within the rail corridor to the southeast. There would be no removal of vegetation required to undertake

this work. Overall, this would result in a moderate magnitude of change, and a moderate visual impact during construction.

Viewpoint 27: View northeast from Illabo Road

- A construction site would be established in the parkland adjacent to the rail corridor. Works to realign the track and strengthen the bridge would be seen in the background of this view. The grassed area at the northern part of the park, at the corner of Illabo Road and the Olympic Highway, would be used as a construction compound, with vehicles seen accessing the site from Illabo Road in the middle ground of view. The mature trees seen in this view within the park and along the track would be protected and retained and filter this view to the works. Overall, there would be a moderate magnitude of change in this view and a moderate visual impact during construction.

Viewpoint 28: View southwest from the Olympic Highway rest stop, Illabo

- Construction work would be seen along the rail corridor, in the middle ground of this view. This would include activities to realign the track and strengthen the bridge. The compound sites to the west of the rail corridor would be located below the level of the rail corridor and out of view. The existing trees within the park along Illabo Road and along the western side of the track would be retained and continue to be seen in the background of this view. Overall, while there would be works in close proximity, these works would be minor and there would be a low magnitude of change to this view and a negligible visual impact

Night-time visual

There is the potential that OOHW would be required, with potential usage of task lighting and headlights from construction vehicles accessing and moving along the rail corridor. Light spill and sky glow from the construction works are expected to have moderate-minor adverse visual impacts at the Olympic Highway underbridge. The lighting associated with works at Junee Yard clearances and pedestrian bridge would be visible within the context of the existing brightly lit station and town centre an absorbed into the night setting. Overall, there would be a negligible magnitude of change and a negligible visual impact during construction at night.

4.10.3 Conclusion

The Proposed Change would involve the same construction activities as assessed for the Junee Yard and pedestrian bridge and Olympic Highway enhancement sites. Due to the extension of the CIZ area, the Proposed Change may result in a minimal increase of visual impact of construction related plant and equipment from the public domain, and reduced screening where vegetation is required to be trimmed or removed. The overall landscape and visual impact of the proposed change would be minimal as the Proposed Change would still involve concentration of construction activities within and immediately adjacent to the rail corridor.

For a detailed consideration on the impact of the Proposed Change area to Aboriginal and non-Aboriginal heritage items and sites, refer to Section 4.4 and Section 4.5.

All applicable mitigation measures in the CoAs and UMMs will be implemented, and any additional mitigation measures are outlined in Table 4-12.Table 4-12

4.11 Matters of national environmental significance

As discussed in Section 1 the A2I Project was referred to the Australian Government Minister for the Environment under the EPBC Act due to potential for impacts on protected matters on 2 June 2020 (EPBC Referral No 202/8670). On 29 June 2020, DAWE notified that the proposal is not a controlled action, and hence approval under the EPBC Act is not required.

The Proposed Change is considered against matters of national environmental significance and impacts on Commonwealth land in accordance with the EPBC Act in Table 4-11, which determined that there would be no impacts on matters of national environmental significance, and no referral is required.

Table 4-11: Matters of environmental significance

FACTOR	IMPACT (YES/NO)	IMPACT DESCRIPTION
Any impact on a World Heritage property?	No	The Proposed Change would not have a direct or indirect impact on any World Heritage property.
Any impact on a National Heritage place?	No	The Proposed Change would not have a direct or indirect impact on any National Heritage place.
Any impact on a wetland of international importance?	No	The Proposed Change would not have a direct or indirect impact on any wetlands of international importance (also referred to a Ramsar wetlands).
Any impact on a listed threatened species or communities?	No	The Proposed Change would not have a direct or indirect impact on listed threatened species or communities. The results from the site assessment, including targeted flora surveys and habitat assessment, were used to assess each species' likelihood of occurrence within the Subject Land. After carrying out the assessment, the assessor determined that the habitat is substantially degraded such that all potential threatened flora species are unlikely to occur within the Subject Land. The degraded vegetation within the Subject Land would only provide low-quality foraging habitat for threatened species. There was no breeding habitat identified (in the form of hollow-bearing trees, rocky outcrops/ caves, waterbodies, large trees or human-made structures). Due to the absence of suitable habitat constraints and/ or the degraded nature of potential habitat and historical clearing, it was determined that the habitat is substantially degraded such that potential threatened fauna are unlikely to utilise the Subject Land. All vegetation proposed for removal provides low-quality foraging habitat for threatened fauna. Within the context of the surrounding landscape, it is unlikely this vegetation would be utilised given the presence of superior habitats adjoining the Subject Land, and in the broader landscape. Further, it is considered unlikely that any threatened species would occupy the Subject Land due to evidence of ongoing disturbance (railway, roads, residential housing). As such, no threatened flora or fauna are likely to be significantly impacted.
Any impacts on listed migratory species?	No	Database searches undertaken as part of the BARM (Appendix D) revealed seven migratory terrestrial species, or their habitat, are known to occur within a five (5) kilometre buffer of the Proposed Change. The biodiversity assessment concludes that 'these species are unlikely to occur and do not breed in Australia'. Therefore, the Proposed Change would not have a direct or indirect impact on any listed migratory species.
Any impact on a Commonwealth marine area?	No	The Proposed Change would not have a direct or indirect impact on any Commonwealth marine area.
Does the proposal involve a nuclear action (including uranium mining)?	No	The Proposed Change does not relate to a nuclear action.
Additionally, any impact (direct or indirect) on Commonwealth land?	No	The Proposed Change is not located in proximity to and would not have any direct or indirect impact on, any Commonwealth land, as per a review of the publicly available 'Commonwealth Owned Land' dataset for non-Corporate Commonwealth entities provided by the Commonwealth Department of Finance (dated 30 June 2024).

4.12 Environmental management measures

Table 4-12Table 4-12 outlines any changes to relevant CoAs and UMMs, called EMMs in this document, that will be implemented as additional management measures for the Proposed Change.

Table 4-12: Additional mitigation measures

ASPECT	NATURE AND EXTENT OF IMPACTS (NEGATIVE AND POSITIVE) DURING CONSTRUCTION (IF CONTROL MEASURES IMPLEMENTED) OF THE PROPOSED CHANGE, RELATIVE TO THE APPROVED PROJECT	PROPOSED CONTROL MEASURES IN ADDITION TO PROJECT COA AND UMM	MINIMAL IMPACT YES/NO	ENDORSED	
				Yes/No	Comments
Traffic and transport	No increase in construction traffic is anticipated and any road closure will be temporary and have minimal impact to residents and local traffic.	No additional measures required.	Yes		
Noise and vibration	Noise and vibration impacts are expected to be temporary. The proposed extension of the CIZs generally mean activities will be undertaken closer to receivers including residential and other sensitive receivers. Through the application of the standard mitigation measures detailed in the CNVISs, the impacts can be managed to not significantly impact receivers differently to what was approved in the EAD.	No additional measures required.	Yes		
Aboriginal heritage	The NAHA which contains an AHA assessment concludes that no impacts to Aboriginal heritage items are expected from the Proposed Change.	No additional measures required.	Yes		
Non-Aboriginal heritage	The NAHA Concludes that the Proposed Change works impact would be temporary and minor in nature and therefore can be managed through the adherence to additional mitigations measures.	Additional mitigation measures recommended as follows: ▸ Vibrations be monitored, and the moveable relics be inspected by a heritage specialist prior to construction. If deemed necessary by the heritage specialist, some items may be temporarily relocated within the Railway Yard or moved to the Junee Roundhouse Railway Museum per CoA NAH10. ▸ Junee Railway Station, Junee Post Office and Junee Railway refreshment rooms are to be demarcated by	Yes		

		an asset protection zone. ▸ The old shunting lines and depot archaeological area are to be demarcated by a 'protection wafer' placed at J2-005.			
Biodiversity	There would be no impacts to threatened species, populations or ecological communities are expected as a result of the Proposed Change. Although outside the assessed construction boundary for the Project, the biodiversity impacts are considered consistent with the initial assessment (WSP, 2023), and no further offsets (ecosystem or species) would be required subject to the implementation of all applicable mitigation measures in the CoAs and UMMs.	No additional measures required.	Yes		
Surface water, flood risk and water quality	The Proposed Change is consistent with level of impact considered as part of the EAD. The Proposed Change would not involve any major earthworks or other construction activities that would substantially alter the flood regime at J2I.	No additional measures required.	Yes		
Soils and contamination	Construction activities at the Proposed Change area would be short term and would be prepared with consideration of the existing soils and contamination characteristics of the area.	No additional measures required.	Yes		
Air quality	Air quality impacts are expected to be short-term and minor in nature.	No additional measures required.	Yes		
Landscape and visual	Impacts to landscape sensitivity, viewpoints and night-time visual are expected to be short-term and minor in nature.	No additional measures required.	Yes		
Cumulative impacts	No substantial impact is expected.	No additional measures required.	Yes		

5 Consistency Assessment

The factors in Table 5-1 are considered against the Proposed Change as described in this document to determine whether the proposed change can be considered consistent with the Minister's approval.

Table 5-1 Consistency questions

CONSISTENCY QUESTION	DISCUSSION	CONSISTENT
Q1) Are the proposed works being carried out as part of an approved project? E.g. Are works "generally in accordance with" project documents and plans, where relevant?	As considered throughout this document, the Proposed Change is being carried out in accordance with the EAD.	Yes
Q2) Is the modification such a radical transformation of the Project as a whole, as to be, in reality, an entirely new Project? Note: If answered Yes, a new project application may be required.	The Proposed Change does not constitute a modification, is not a radical transformation of the Project as a whole and is not an entirely new Project.	Yes
Q3) Are the proposed works a modification that is considered "consistent with" the project as approved? This will require the work in question to have environmental impacts contemplated by the approval (such as EA / EIS, CEMP, spoil management plan, heritage management plan or the like), including documents forming part of the approval, or as a minimum, very few additional impacts.	The Proposed Change, as considered in Chapter 2 is considered "consistent with" the Infrastructure Approval. The Proposed Change is considered to be consistent with the impacts contemplated by the EAD outlined in CoA 1 of the Infrastructure Approval.	Yes
Q4) When considering all previous consistency assessments and the potential cumulative impacts, are the proposed works still considered 'consistent with' the project as approved?	The Proposed Change is considered "consistent with" the Project, including any potential cumulative impacts. Any subsequent consistency assessments would be subject separate consideration for potential cumulative impacts.	Yes

6 Monitoring and Reporting

There are no further monitoring or reporting required as a result of the Proposed Change.

7 Conclusion

Based on the consistency assessment in this report, the Proposed Change is considered:

☒ Consistent with the Ministers Conditions of Approval, and the Statement of Commitments / Mitigation Measures.

☐ ~~Not consistent with the Ministers Conditions of Approval, and the Statement of Commitments / Mitigation Measures. A modification to the project approval must be prepared and submitted to the Department of Planning Infrastructure and Environment for approval.~~

8 Certification

Author

This consistency assessment provides a true and fair review of the proposed change for the Inland Rail – Albury to Illabo (A2I) project.

Name: Simon Fisher	**Signature:**
Position: Environment Lead (A2I)	**Date:** 27/08/2025
Organisation: Martinus Rail	

Inland Rail

The Proposed Change, subject to the implementation of all the environmental requirements of the project, is consistent with the Division 5.2 approval.

Name: Susan Kay	**Signature:**
Position: Principal Environment Advisor	**Date:** 28/8/2025
Organisation: Inland Rail	

Name: BJones	**Signature:**
Position: (Manager) Head of Program Environment	**Date:** 29/08/2025
Organisation: IRPL	

I have examined the proposed changes by reference to the Division 5.2 approval in accordance with Section 5.25(2) of the EP&A Act. I consider that the proposal is consistent with the Division 5.2 approval.

I agree / [redacted] with the recommendations of the [Insert above signatory e.g. PEL] and approve [redacted] of the carrying out the proposed change in accordance with those recommendations.

Appendix A Construction Noise and Vibration Impact Statements and SLR Predict – A2I Noise and Vibration Tool

Construction Noise and Vibration Impact Statement (CNVIS)

This report presents the outcomes of detailed noise/vibration modelling relating to specific construction activities proposed on site in accordance with the methodology outlined in the *Construction Noise and Vibration Management Plan* (CNVMP) and overarching *Construction Noise and Vibration Impact Statement* (CNVIS).

Prior to detailed noise/vibration modelling being undertaken, work activities are reviewed and considered in relation to industry best practice, consistent with the requirements of the CNVMP. Consideration is first given to eliminating the noise/vibration emissions so far as reasonably practicable. Where elimination is not practicable, efforts are been made to reduce the risk as far as practical by implementing noise and vibration management measures as outlined in the overarching CNVIS and CNVMP.

Examples of these measures include selecting the quietest equipment and processes to complete the works, considering staging and periods of respite to minimise prolonged periods of noise and vibration exposure, and maximising distances between construction activities and sensitive receivers.

Consultation with Affected Receivers

In accordance with CoA E78, the CNVIS must include specific mitigation measures identified through consultation with affected sensitive land user(s) and the mitigation measures must be implemented for the duration of the Work. Details of this consultation are provided in the overarching CNVIS for each enhancement site.

Assessment Details

Author Name	
Author Email	noiseassessments@martinus.com.au
Author Organisation	Martinus Rail
Project Name	A2I - Albury to Illabo
Assessment Name	Kemp Street Line Marking_Proposed Equipment
Stage	A2I Construction
Permit Number	17.004
Start Date	2025-09-03
End Date	2025-09-03
Assessment Period	Night - out of hours

Equipment Details

Plant/Equipment	Equipment Sound Power Level (Unadjusted), dBA	Number of Units	Temporary Noise Barrier
1: Line Marking 2 (Height: Ground)	Total: 116		
Water Cart 75% operation	107	2	No
Pavement Profiler 50% operation	117	1	No
Light Vehicle (accelerating) 25% operation	95	3	No
Lighting Tower 100% operation	80	3	No
Line Marking Truck 50% operation	108	1	No
2: Line Marking 1 (Height: Ground)	Total: 116		
Water Cart 75% operation	107	2	No
Pavement Profiler 50% operation	117	1	No

Note 1: Equipment classed as 'annoying' in the *Interim Construction Noise Guideline (DECC, 2009)* include a 5 dB correction.
Note 2: Equipment sound power levels consider the mitigation measures outlined in the overarching CNVIS to provide mitigated results.

Equipment Details

Plant/Equipment	Equipment Sound Power Level (Unadjusted), dBA	Number of Units	Temporary Noise Barrier
Light Vehicle (accelerating) 25% operation	95	1	No
Lighting Tower 100% operation	80	3	No
Line Marking Truck 50% operation	108	1	No

Note 1: Equipment classed as 'annoying' in the *Interim Construction Noise Guideline (DECC, 2009)* include a 5 dB correction.
Note 2: Equipment sound power levels consider the mitigation measures outlined in the overarching CNVIS to provide mitigated results.

Assessment Results

		Residential	Non-Residential
	Highly Intrusive	5 properties	1 property
	Moderately Intrusive	41 properties	2 properties

Assessment Results

	Clearly Audible	398 properties	0 property
	Noticeable	515 properties	3 properties
	Above Sleep Disturbance	110 properties	0 property
	Above Sleep Awake	5 properties	0 property

Recommended Mitigation Measures

This assessment has been conducted with regard to the relevant CNVIS and CNVMP. To manage noise and vibration impacts, project specific mitigation measures may be considered such as reviewing construction staging methodology to identify opportunities to schedule intensive works during less sensitive time periods and by providing a clear process for community engagement and complaints. Likewise, the requirements and actionable items within the overarching CNVIS and CNVMP should be considered and adopted where appropriate. Following the consideration of project specific noise mitigation measures, additional noise mitigation measures to be explored are described in the Inland Rail NSW Construction Noise and Vibration Framework (CNVF) and summarised below.

Airborne Noise - Additional Mitigation Measures Matrix				
Time Period	**Exceedance of NML**	**Perception**	**Duration**	**Communication Category/Management Measure**
OOHW Daytime Period Sunday 7am - 6pm (including public holidays)	<5	Noticeable	Any	CO1
	5 - 15	Clearly audible	Any	CO1
	16 - 25	Moderately intrusive	Any	CO1, CO2
	>25	Highly intrusive	Any	CO1, CO2
OOHW Evening Period Monday - Sunday 6pm - 10pm (including public holidays)	<5	Noticeable	Any	CO1
	5 - 15	Clearly audible	Any	CO1
	16 - 25	Moderately intrusive	Any	CO1, CO2
	>25	Highly intrusive	Any	CO1, CO2
			>2 consecutive rest periods	CO1, CO2, RO
OOHW Night Period Monday - Sunday 10pm - 7am (including public holidays)	<5	Noticeable	Any	CO1
	5 - 15	Clearly audible	Any	CO1
	16 - 25	Moderately intrusive	Any	CO1, CO2
			>2 consecutive sleep periods	CO1, CO2, RO, AO
	>25	Highly intrusive	Any	CO1, CO2, RO
			>2 consecutive sleep periods	CO1, CO2, RO, AO, AltA

Note 1: CO1: Communication to provide information on the OOHW via methods such as letter box drop, email, newsletter, media advertisements and/ or website prior to the works commencing.
Note 2: CO2: Communication should be personalised (e.g. door knock, meeting, telephone call). Contact with these residents should commence early to enable feedback to be considered by the proposal.
Note 3: RO are not applicable to non-residential receivers. RO may comprise of pre-purchased movie tickets, dinner vouchers or similar. RO can also be provided by limiting high noise generating works and allowing at least a one-hour respite period between blocks of work. Where possible, the timing of this respite should be discussed with the impacted community.

Vibration - Additional Mitigation Measures Matrix

Time Period	Duration	Exceedance of 'preferred' value	Exceedance of 'maximum' value
OOHW Daytime Period Sunday 8am-6pm	Any	CO1, CO2	CO1, CO2, RO
OOHW Evening Period Mon-Sun 6pm-10pm	Any	CO1, CO2	CO1, CO2, RO
OOHW Night Period Mon-Sat 10pm-7am Sun 10pm-8am	Any	CO1, CO2, RO	CO1, CO2, RO, AltA

Additional Mitigation Measures

Measure	Abbreviation
Communication (Category 1)	CO1
Communication (Category 2)	CO2
Respite Offer[1]	RO
Alternative Accommodation	AltA
Agreement with Owners	AO

Note 1: Respite Offers are not applicable to non-residential receivers.

Receiver Types

Code	Description	Code	Description

Basis of Report

This report has been prepared by SLR Consulting Australia (SLR) with all reasonable skill, care and diligence, and taking account of the timescale and resources allocated to it by agreement with Martinus Rail (the Client). Information reported herein is based on the interpretation of data collected, which has been accepted in good faith as being accurate and valid.

This report is for the exclusive use of the Client. No warranties or guarantees are expressed or should be inferred by any third parties. This report may not be relied upon by other parties without written consent from SLR.

SLR disclaims any responsibility to the Client and others in respect of any matters outside the agreed scope of the work.

Compliance Table

CoA	Requirement	Reference
A1	The Proponent must carry out the CSSI in accordance with the terms of this approval and generally in accordance with the: a) Inland Rail – Albury to Illabo Environmental Impact Statement (ARTC, August 2022) b) Albury to Illabo Response to Submissions (ARTC, November 2023) c) Albury to Illabo Preferred Infrastructure Report (ARTC, November 2023) d) Albury to Illabo Preferred Infrastructure Report Response to Submissions (ARTC, February 2024) e) Inland Rail – Albury to Illabo (SSI-10055) Response to request for additional information – Air Quality Assessment (letter dated 1 May 2024) f) Part 1 - Revised Technical Paper 8: Biodiversity Development Assessment Report (WSP, February 2024) g) Part 2 - Revised Technical Paper 8: Biodiversity Development Assessment Report (WSP, February 2024)	**The CNVMP**
A2	The CSSI must only be carried out in accordance with all procedures, commitments, preventative actions, performance criteria and mitigation measures set out in the documents listed in Condition A1 unless otherwise specified in, or required under, this approval.	**The CNVMP**
C9	The Construction Noise and Vibration Sub-plan must include, but not limited to: a) measures to reduce construction to standard ICNG hours where sensitive land uses are likely to be noise affected for more than 3 months; b) an approach to assess and manage construction fatigue from noise impacts on sensitive receivers on an ongoing basis; c) noise sensitive periods identified by the community, religious, educational institutions, noise and vibration-sensitive businesses and critical working areas and measures to ensure noise levels above the NMLs do not occur during sensitive periods in accordance with Condition E76; d) mitigation for construction traffic noise impacts from additional construction traffic and road diversions; e) the location of all heritage items, non-heritage structures and infrastructure likely to be impacted by vibration and measures to manage vibration impacts at those items and structures; and f) vibration levels at a range of distances from vibration intensive equipment such as excavators and vibratory rollers before undertaking works with the specific type and size of equipment.	**The CNVMP**
E68	A detailed land use survey must be undertaken to confirm sensitive land use(s) (including critical working areas such as operating theatres and precision laboratories) potentially exposed to construction noise and vibration, construction ground-borne noise and operational noise. The survey may be undertaken on a progressive basis but must be undertaken in any one area before the commencement of work which generates construction or operational noise, vibration or ground-borne noise in that area. The results of the survey must be included in the Noise and Vibration CEMP sub-plan required by Condition C8.	**The CNVMP, Section 3.0, Figure 1**
E69	Work must be undertaken during the following hours: a) 7:00am to 6:00pm Mondays to Fridays, inclusive; b) 7:00am to 6:00pm Saturdays; and c) at no time on Sundays or public holidays.	**Section 2.2**

CoA	Requirement	Reference
E70	Except as permitted by an EPL, highly noise intensive works that result in an exceedance of the applicable NML at the same receiver must only be undertaken: a) between the hours of 8:00 am to 6:00 pm Monday to Friday; b) between the hours of 8:00 am to 1:00 pm Saturday; and c) if continuously, then not exceeding three (3) hours, with a minimum cessation of work of not less than one hour. For the purposes of this condition, 'continuously' includes any period during which there is less than one hour between ceasing and recommencing any of the work.	**Section 2.2.1**, **Section 8.2**
E71	Notwithstanding Conditions E69 and E70, work may be undertaken outside the hours specified in the following circumstances (a, b, or c): a) Safety and Emergencies, including: i. for the delivery of materials required by the NSW Police Force or other authority for safety reasons; or ii. where it is required in an emergency to avoid injury or the loss of life, to avoid damage or loss of property or to prevent environmental harm. On becoming aware of the need for emergency work in accordance with Condition E71(a), the AA, the ER, the Planning Secretary and the EPA must be notified of the reasons for such work. Best endeavours must be used to notify all noise and/or vibration affected residents and owners/occupiers of properties identified sensitive land use(s) of the likely impact and duration of those work. b) Work, that meets the following criteria: i. construction that causes $L_{Aeq(15\ minute)}$ noise levels: • no more than 5 dB(A) above the rating background level at any residence in accordance with the ICNG, and • no more than the 'Noise affected' NMLs specified in Table 3 of the ICNG at other sensitive land use(s); and ii. construction that causes L_{AFmax} noise levels no more than 15 dB above the rating background level at any residence during the night period as defined in the ICNG. and iii. construction that causes: • continuous or impulsive vibration values, measured at the most affected residence no more than the preferred values for human exposure to vibration, specified in Table 2.2 of *Assessing Vibration: a technical guideline* (DEC, 2006), or • intermittent vibration values measured at the most affected residence no more than the preferred values for human exposure to vibration, specified in Table 2.4 *of Assessing Vibration: a technical guideline* (DEC, 2006). c) By Approval, including: i. where different construction hours, such as those for a rail possession, are permitted under an EPL in force in respect of the CSSI; or ii. works which are not subject to an EPL that are approved under an Out-of-Hours Work Protocol as required by Condition E72; or iii. negotiated agreements with directly affected residents and sensitive land use(s).	**Section 2.3**
E72	An Out-of-Hours Work Protocol must be prepared to identify a process for the consideration, management and approval of work which is outside the hours defined in Conditions E69, and that are not subject to an EPL. The Protocol must be approved by the Planning Secretary before commencement of the Out-of-Hours Work. The Protocol must be prepared in consultation with the ER, AA and EPA.	**The CNVMP, Section 2.4**

CoA	Requirement	Reference
	The Protocol must include: a) identification of low and high-risk activities and an approval process that considers the risk of activities, proposed mitigation, management, and coordination, including where: i. the ER and AA review all proposed out-of-hours activities and confirm their risk levels, ii. low risk activities can be approved by the ER in consultation with the AA, and iii. high risk activities that are approved by the Planning Secretary; b) a process for the consideration of out-of-hours work against the relevant NML and vibration criteria; c) a process for selecting and implementing mitigation measures for residual impacts in consultation with the community at each affected location, including respite periods. The measures must take into account the predicted noise levels and the likely frequency and duration of the out-of-hours works that sensitive land use(s) would be exposed to, including the number of noise awakening events; d) procedures to facilitate the coordination of out-of-hours work including those approved by an EPL or undertaken by a third party, to ensure appropriate respite is provided; and e) notification arrangements for affected receivers for approved out-of-hours work and notification to the Planning Secretary of approved low risk out-of-hours works. This condition does not apply if the requirements of Condition E71 are met.	
E73	Except as permitted by an EPL, out-of-hours work that may be regulated through the Out-of-Hours Work Protocol as per Condition E72, but is not limited to: a) Carrying out work that if carried out during standard hours would result in a high risk to construction personnel or public safety based on a risk assessment carried out in accordance with AS/NZS ISO 31000:2009: "Risk management; or b) where the relevant roads authority has advised the Proponent in writing that carrying out the work during standard hours would result in a high risk to road network performance and a road occupancy licence will not be issued; or c) where the relevant utility service operator has advised the Proponent in writing that carrying out the work during standard hours would result in a high risk to the operation and integrity of the utility network; or d) work undertaken in a rail possession for operational or safety reasons. *Note: Other out-of-hours works can be undertaken with the approval of an EPL, or through the project's Out-of-Hours Work Protocol for works not subject to an EPL.*	**Section 2.3**
E74	Mitigation measures must be implemented with the aim of achieving the following construction noise management levels and vibration objectives: a) construction 'Noise affected' NMLs established using the Interim Construction Noise Guideline (DECC, 2009); b) vibration criteria established using *the Assessing vibration: a technical guideline* (DEC, 2006) (for human exposure); c) Australian Standard AS 2187.2 - 2006 "*Explosives - Storage and Use - Use of Explosives*"; d) BS 7385 Part 2-1993 "*Evaluation and measurement for vibration in buildings Part 2*" as they are "applicable to Australian conditions"; and e) the vibration limits set out in the *German Standard DIN 4150-3: Structural Vibration- effects of vibration on structures* (for structural damage).	**The CNVMP, Section 4.0**, **Section 8.0**

CoA	Requirement	Reference
	Work that exceeds the noise management levels and/or vibration criteria must be managed in accordance with the Noise and Vibration CEMP sub-plan. *Note: The ICNG identifies 'particularly annoying' activities that require the addition of 5 dB(A) to the predicted level before comparing to the construction NML.*	
E75	Mitigation measures must be applied when the following residential ground-borne noise levels are exceeded: a) evening (6:00 pm to 10:00 pm) — internal $L_{Aeq(15\ minute)}$: 40 dB(A); and b) night (10:00 pm to 7:00 am) — internal $L_{Aeq(15\ minute)}$: 35 dB(A). The mitigation measures must be outlined in the Noise and Vibration CEMP sub-plan, including in any Out-of-Hours Work Protocol, required by Condition E72.	**Section 4.2.3**
E76	Noise generating work in the vicinity of community, religious, educational institutions, noise and vibration-sensitive businesses and critical working areas (such as exam halls, theatres, laboratories and operating theatres) resulting in noise levels above the NMLs must not be timetabled during sensitive periods, unless other reasonable arrangements with the affected institutions are made at no cost to the affected institution.	**Section 8.0**
E77	At no time can noise generated by construction exceed the National Standard for exposure to noise in the occupational environment of an eight-hour (8hr) equivalent continuous A-weighted sound pressure level of $L_{Aeq,8h}$ of 85 dB(A) for any employee working at a location near the CSSI.	**Section 8.6**
E78	Construction Noise and Vibration Impact Statements (CNVIS) must be prepared for work that may exceed the noise management levels, vibration criteria and/or ground-borne noise levels specified in Condition E74 and Condition E75 at any residence outside construction hours identified in Condition E69, or where receivers will be highly noise affected. The CNVIS must include specific mitigation measures identified through consultation with affected sensitive land use(s) and the mitigation measures must be implemented for the duration of the works. A copy of the CNVIS must be provided to the AA and ER prior to the commencement of the associated works. The Planning Secretary may request a copy/ies of CNVIS.	**This report, Section 8.5**
E79	Owners and occupiers of properties at risk of exceeding the screening criteria for cosmetic damage must be notified before work that generates vibration commences in the vicinity of those properties. If the potential exceedance is to occur more than once or extend over a period of 24 hours, owners and occupiers are to be provided a schedule of potential exceedances on a monthly basis for the duration of the potential exceedances, unless otherwise agreed by the owner and occupier. These properties must be identified and considered in the Noise and Vibration CEMP Sub-plan required by Condition C8 and the Community Communication Strategy required by Condition B1.	**Section 8.0**
E80	Vibration testing must be undertaken before and during vibration generating activities that have the potential to impact on heritage items to identify minimum working distances to prevent cosmetic damage. In the event that the vibration testing and attended monitoring shows that the preferred values for vibration are likely to be exceeded, the construction methodology must be reviewed and, if necessary, additional mitigation measures implemented.	**Section 6.1, Section 8.0**
E81	Advice from an independent heritage specialist must be sought on methods and locations for installing equipment used for vibration, movement and noise monitoring at heritage-listed structures. *Note: The heritage specialist is to provide advice prior to installing equipment that may impact the heritage significance or structural integrity of the heritage listed structures.*	**Section 8.0**
E83	All work undertaken for the delivery of the CSSI, including those undertaken by third parties (such as utility relocations), must be coordinated to ensure respite periods are provided. This must include:	**Section 8.0, Section 8.2**

CoA	Requirement	Reference
	a) rescheduling work to provide respite to impacted noise sensitive land use(s) so that the respite is achieved; or b) the provision of alternative respite or mitigation to impacted noise sensitive land use(s); and c) the provision of documentary evidence to the AA in support of any decision made in relation to respite or mitigation. The consideration of respite must also include all other CSSI, SSI and SSD projects which may cause cumulative and/or consecutive impacts at receivers affected by the delivery of the CSSI.	
E119	The Proponent must coordinate Work with adjoining Inland Rail Projects, including any work to relocate or connect utilities, to minimise cumulative and consecutive noise and vibration impacts and maximise respite for affected sensitive land uses. Coordination and mitigation measures must be detailed in the Construction Noise and Vibration management Sub-plan required by Condition C9.	**Section 8.0, Section 8.2, Section 9.0**
E122	Property damage caused directly or indirectly (for example from vibration or from groundwater change) by the construction or operation must be rectified at no cost to the owner. Alternatively, compensation may be provided for the property damage as agreed with the property owner.	**Section 6.1**

1.0 Introduction

SLR Consulting Australia Pty Ltd (SLR) has been engaged by Martinus Rail (MR) to prepare a construction noise and vibration impact statement (CNVIS) for the Junee Yard precinct work in the Junee, NSW. These sites form part of the Albury to Illabo (A2I) section of Inland Rail (the Project).

This assessment has been prepared in accordance with the Construction Noise and Vibration Management Plan (CNVMP) for the A2I section of the Project.

This report assesses the potential construction noise and vibration impacts for the work associated with the Junee Yard precinct sites. An explanation of the specialist acoustic terminology used in this report is provided in **Appendix A**.

2.0 Project Description

Inland Rail is an approximate 1,600 kilometres (km) freight rail network that will connect Beveridge and Kagaru via regional Victoria, New South Wales and Queensland. The Inland Rail route would involve using approximately 1,000 km of existing track (with enhancements and upgrades where necessary) and 600 km of new track, passing through 30 local government areas. Inland Rail will accommodate double-stacked freight trains up to 1,800 metres (m) long and 6.5 m high.

The Albury to Illabo (A2I) section (the Project) forms a key component of the Inland Rail program. It is a 185 km section of existing rail corridor located in regional NSW between the towns of Albury and Illabo. Works would include track realignment, lowering and/or modification within the existing rail corridor, modification, removal or replacement of bridge structures (rail, road and/or pedestrian bridges), raising or replacing signal gantries, level-crossing modifications and other associated works. This CNVIS is associated with the Junee Yard precinct enhancement sites.

Relevant noise and vibration conditions from the Conditions of Approval (CoA) are detailed within the compliance table at the beginning of this document and will be complied with during the work.

2.1 Scope of this CNVIS

The focus of this CNVIS is the work associated with the Junee Yard precinct. Work at these sites will be conducted across three main site areas and includes:

- Site Establishment / Demobilisation
- Compound Operation
- Geotechnical Investigation
- Driver change platform works
- Track Work including subsequent track tamping works
- Gantry Removal
- Signalling Work and signalling cable installation
- Pedestrian Bridge Removal

Further details of work activities are outlined in **Section 5.1**. The work areas are surrounded by a combination of residential, commercial, industrial, educational and medical receivers. Additionally, there are several childcare centres, places of worship, hotels, libraries and public buildings at various setbacks from the main areas of work. The Project location, work areas and surrounding receivers are shown in **Figure 1**.

2.2 Hours of work

In accordance with the Construction Noise and Vibration Management Plan (CNVMP) and CoA E69 construction work must be undertaken within the approved standard construction hours:

a) 7:00am to 6:00pm Monday to Friday, inclusive;

b) 7:00am to 6:00pm Saturday and

c) At no time on Sundays or public holidays.

2.2.1 Highly Noise Intensive Work

As outlined in the CoA E70, any highly noise intensive works that result in an exceedance of the applicable NML at the same receiver must only be undertaken:

a) Between 08:00am – 06:00pm Monday to Friday;

b) Between 08:00am – 01:00pm Saturday; and

c) If continuously, then not exceeding (3) hours, with a maximum cessation of work of not less than one hour.

The CoA defines 'highly noise intensive works' as those identified as annoying under the Interim Construction Noise Guideline (ICNG) and include:

- Use of power saws, such as used for cutting timber, rail lines, masonry, road pavement or steel work;
- Grinding metal, concrete or masonry;
- Rock drilling;
- Line drilling;
- Vibratory rolling;
- Bitumen milling or profiling;
- Jackhammering, rock hammering or rock breaking;
- Impact piling; and
- Tamping (for rail projects).

2.3 Variation to hours of work

Notwithstanding CoA E69 and E70, work may be undertaken outside the hours specified in the following CoA E71 circumstances (a, b, or c):

a) Safety and Emergencies

b) Work, that meets specific criteria

c) By Approval

Note: refer to **Compliance Table** for further detail.

2.4 Justification of Out of Hours Work (OOHW)

Work activities that may be required or proposed to be undertaken outside of standard working hours will be managed in accordance with the OOHW Protocol as defined in CoA E72 and E73, unless the work is regulated by an EPL.

All work on or adjacent to roads would be carried out in accordance with a relevant Traffic Control Plan (TCP), Road Occupancy Licence (ROL) and/or rail possession to facilitate safe work near live road/rail traffic. Where an ROL/rail possession cannot be obtained for the approved project hours and/or proposed works cannot be undertaken safely during these hours, some works will be required to be undertaken outside of standard hours (ie Out of Hours Work, OOHW).

As outlined in the ICNG, work undertaken on public infrastructure may need to be undertaken outside the recommended standard hours. For this project the need is based on a requirement to sustain the operational integrity of public infrastructure, as works to restore operation of the infrastructure provide benefit to the greater community (ie more than just local residents).

Further detail around the specific work tasks, duration and justification of OOHW must be identified in the OOHW permit, required by the OOHW Protocol or EPL.

3.0 Existing Environment

The existing ambient noise environment was described in Environmental Impact Statement (EIS), Technical Paper 6 – Noise and Vibration (Non-Rail) for the Albury to Illabo project. This section provides details of the existing ambient noise environment relevant to the Junee Yard precinct.

The noise catchment area (NCA) used are consistent with the NCAs described in the EIS and are shown in **Figure 1** with the receiver classifications and approximate noise monitoring location.

A detailed land use survey was undertaken in August 2024 to confirm sensitive land uses within the project area, results of the land use survey have been incorporated into the receiver classifications shown in **Figure 1.**

3.1 Background Noise Levels

Background noise levels have been referenced from the baseline noise survey undertaken as part of the EIS and reproduced in the CNVMP. The background noise levels relevant to the Junee Yard precinct works are summarised in **Table 1**.

Table 1 Background Noise Levels

Noise Monitoring Location	NCA	Rating background Level (RBL) dBA NPfI defined time periods[1]		
		Daytime period	Evening period	Night-time period
14	NCA14	42	42[2] (45)	35

Note 1: The assessment periods are the daytime which is 7 am to 6 pm Monday to Saturday and 8 am to 6 pm on Sundays and public holidays, the evening which is 6 pm to 10 pm, and the night-time which is 10 pm to 7 am on Monday to Saturday and 10 pm to 8 am on Sunday and public holidays. See the NSW EPA Noise Policy for Industry (NPfI).

Note 2: The evening RBL data has been reduced to the daytime period RBL in this case (bracketed figures indicates the measured value).

4.0 Assessment Criteria

4.1 Construction Noise and Vibration Guidelines

The standards and guidelines relevant to the Project are listed in **Table 2**. These guidelines aim to protect the community and environment from excessive noise and vibration impacts during construction of projects.

Table 2 Construction Noise and Vibration Standards and Guidelines

Guideline/Policy Name	Where Guideline Used
Inland Rail NSW Construction Noise and Vibration Framework (CNVF)	Assessment and management protocols for airborne noise, ground-borne noise and vibration impacts for construction of NSW Inland Rail projects
Interim Construction Noise Guideline (ICNG) (DECC, 2009)	Assessment of airborne noise impacts on sensitive receivers
Environmental Criteria for Road Traffic Noise (ECRTN) (EPA, 1999)	Contains guidance for assessing potential sleep disturbance impacts
Road Noise Policy (RNP) (DECCW, 2011)	Assessment of construction traffic impacts
BS 7385 Part 2-1993 Evaluation and measurement for vibration in buildings Part 2, BSI, 1993	Assessment of vibration impacts (structural damage) to non-heritage sensitive structures
DIN 4150:Part 3-2016 Structural vibration – Effects of vibration on structures, Deutsches Institut für Normung, 2016	Screening assessment of vibration impacts (structural damage) to heritage sensitive structures, where the structure is found to be unsound
Assessing Vibration: a technical guideline (DEC, 2006)	Assessment of vibration impacts on sensitive receivers
AS2187.2:2006 Explosives – Storage and use Part 2: Use of explosives	Assessment of impacts from blasting activities
*Construction Noise and Vibration Guideline (Public Transport Infrastructure) (*CNVG-PTI) (Transport for NSW, 2023)	Utilised for minimum working distances for vibration intensive work.

4.2 Noise Management Levels

The noise management levels (NMLs) for residential and other sensitive receivers have been adopted from the CNVMP, as determined in the EIS. Receiver types and locations are shown **Figure 1**.

4.2.1 Residential Receivers

Project-specific NMLs for residential receivers were determined for NCA14 which encompasses all assessable receivers in close proximity to the Junee Yard precinct. NMLs for other sensitive receivers are fixed values adopted from the Interim Construction Noise Guideline (ICNG) (DECC, 2009) and outlined in the CNVMP. Residential NMLs for NCA014 surrounding the Junee Yard work sites are shown in **Table 3**.

Table 3 Residential Noise Management Levels

NCA	Noise Management Level ($L_{Aeq(15minute)}$ - dBA)				Sleep disturbance Screening Level (RBL +15dB or 52 dB)	Sleep Awakening Reaction Level
	Approved Hours (RBL +10dB)	Out of Hours[1]				
		Daytime (RBL +5dB)	Evening (RBL +5dB)	Night-time (RBL +5dB)		
NCA14	52	47	47	40	52	65

Note 1: Approved Construction Hours are Monday to Saturday 7 am to 6 pm, as defined in CoA E69.

Note 2: Work outside of the Approved Hours is defined as OOHW = Out of Hours Work. Daytime out of hours is Sunday and public holidays between 8 am to 6 pm. Evening is 6pm to 10pm Monday – Sunday (including public holidays). Night-time is 10pm to 7am Monday – Saturday and 10pm to 8am Sunday (including public holidays).

Highly Noise Affected

In addition to the NMLs presented above, the ICNG highly noise affected level (>75 dBA) represents the point above which there may be strong community reaction to noise and is applicable to all residential receivers during approved project hours as outlined in the CNVMP and the ICNG.

Sleep Disturbance

Where the sleep disturbance screening level (RBL + 15 dB or 52 dB, whichever is greater, see **Table 3**) is exceeded, further assessment is required to determine whether the 'awakening reaction' level of L_{Amax} 65 dBA (external) would be exceeded and the likely number of these events. The awakening reaction level is the level above which residents are likely to be awoken from sleep.

4.2.2 Other Sensitive Land Uses and Commercial Receivers

The ICNG NMLs for 'other sensitive' non-residential land uses are shown in **Table 4**.

The ICNG references *AS2107:2016 Acoustics – Recommended design sound levels and reverberation times for building interiors* for criteria for 'other sensitive' receivers which are not listed in the guideline. Neither the ICNG nor AS2107 provide criteria for child care centres so the Association of Australian Acoustical Consultants *Guideline for Child Care Centre Acoustic Assessment* (GCCCAA) has been referenced.

Table 4 NMLs for 'Other Sensitive' Receivers

Land Use	Noise Management Level $L_{Aeq(15minute)}$ (dB) (Applied when the property is in use)	
	Internal	External
ICNG 'Other Sensitive' Receivers		
Classrooms at schools and other educational institutions	45	55[1]
Hospital wards and operating theatres	45	65[2]
Places of worship	45	55[1]
Active recreation areas (characterised by sporting activities which generate noise)	-	65
Passive recreation areas (characterised by contemplative activities that generate little noise)	-	60
Commercial	-	70

Land Use	Noise Management Level $L_{Aeq(15minute)}$ (dB) (Applied when the property is in use)	
	Internal	External
Industrial	-	75
Non-ICNG 'Other Sensitive' Receivers		
Hotel – daytime & evening[3]	50	60[1,5]
Hotel – night-time[3]	35	45[1,5]
Child care centres – activity areas[4]	40	50[1,5]
Child care centres – sleeping areas[4]	35	45[1,5]
Library[3]	45	55[1]
Public Building[3]	50	60[1]
Aged Care	Considered as Residential	

Note 1: It is assumed that these receivers have windows partially open for ventilation which results in internal noise levels being around 10 dB lower than the external noise level.

Note 2: It is assumed that these receivers have fixed windows which conservatively results in internal noise levels being around 20 dB lower than the external noise level.

Note 3: Criteria taken from AS2107.

Note 4: Criteria taken from Association of Australian Acoustical Consultants Guideline for Child Care Centre Acoustic Assessment.

Note 5: Some receivers near highways or rail lines may have building façade mitigation and air-conditioning. Where evidence is provided a 20dB reduction from external to internal may be adopted.

4.2.3 Ground-borne Noise

Construction work can cause ground-borne (structure-borne or regenerated) noise impacts in nearby buildings when vibration intensive equipment is in use, such as during tunnelling or excavation work using tunnel boring machines, roadheaders or rockbreakers. Vibration can be transmitted through the ground and into nearby buildings, which can then create audible noise impacts inside the building.

Ground-borne noise NMLs are applicable where ground-borne noise levels are likely to be higher than airborne noise levels, which can occur where work is underground or where surface work is shielded by noise barriers, other structures or façade mitigation at the receiver. Ground-borne noise is generally found to generate impacts during the evening and night-time periods when ambient noise levels are often much lower, and ground-borne noise is more prominent.

The internal ground-borne noise NMLs for residential receivers are shown in **Table 5**.

Table 5 Internal ground-borne NMLs

Receiver Type	Noise Management Level ($L_{Aeq(15minute)}$ – dBA)		
	Daytime[1]	Evening[2]	Night-time[2]
Residential	n/a	40	35

Note 1: Daytime ground-borne noise NMLs are not specified in the ICNG of CoA.

Note 2: Specified in the ICNG and CoA E75.

For other sensitive receivers, the ICNG does not provide guidance in relation to acceptable ground-borne noise levels. For the purpose of this CNVIS, the internal airborne NMLs presented in **Table 4** will also be adopted for ground-borne noise.

4.3 Vibration Criteria

The effects of vibration from construction work can be divided into three categories:

- Those in which the occupants of buildings are disturbed (**human comfort**). People can sometimes perceive vibration impacts when vibration generating construction work is located close to occupied buildings. Vibration from construction work tends to be intermittent in nature and the EPA's Assessing Vibration: a technical guideline (2006) (AV:ATG) provides criteria for intermittent vibration based on the Vibration Dose Value (VDV), as shown in **Table 6**. While the construction activities for the proposal are generally not expected to result in continuous or impulsive vibration impacts, corresponding criteria are provided in **Table 7**.
- Those where building contents may be affected (**building contents**). People perceive vibration at levels well below those likely to cause damage to building contents. For most receivers, the human comfort vibration criteria are the most stringent and it is generally not necessary to set separate criteria for vibration effects on typical building contents. Exceptions to this can occur when vibration sensitive equipment, such as electron microscopes or medical imaging equipment, are in buildings near to construction work. No such equipment has been identified in the study area.
- Those where the integrity of the building may be compromised (**structural/cosmetic damage**). If vibration from construction work is sufficiently high it can cause cosmetic damage to elements of affected buildings. Industry standard cosmetic damage vibration limits are specified in British Standard BS 7385 and German Standard DIN 4150. The limits are shown in **Table 8** and **Table 9**.

Table 6 Human Comfort Vibration – Vibration Dose Values for Intermittent Vibration

Building Type	Assessment Period	Vibration Dose Value[1] ($m/s^{1.75}$)	
		Preferred	Maximum
Critical Working Areas (eg operating theatres or laboratories)	Day or night-time	0.10	0.20
Residential	Daytime	0.20	0.40
	Night-time	0.13	0.26
Offices, schools, educational institutions and places of worship	Day or night-time	0.40	0.80
Workshops	Day or night-time	0.80	1.60

Note 1: The VDV accumulates vibration energy over the daytime and night-time assessment periods, and is dependent on the level of vibration as well as the duration.

Table 7 Human Comfort Vibration – Preferred and Maximum Weighted Root Mean Square Values for Continuous and Impulsive Vibration Acceleration (m/s^2) 1–80 Hz

Location	Assessment period	Preferred values		Maximum values	
		z-axis	x- and y-axis	z-axis	x- and y-axis
Continuous vibration					
Residential	Daytime	0.010	0.0071	0.020	0.014
	Night-time	0.007	0.005	0.014	0.010
Offices, schools, educational institutions and places of worship	Day or night-time	0.020	0.014	0.040	0.028
Workshops	Day or night-time	0.04	0.029	0.080	0.058
Impulsive vibration					
Residential	Daytime	0.30	0.21	0.60	0.42
	Night-time	0.10	0.071	0.20	0.14
Offices, schools, educational institutions and places of worship	Day or night-time	0.64	0.46	1.28	0.92
Workshops	Day or night-time	0.64	0.46	1.28	0.92

Table 8 Cosmetic Damage – BS 7385 Transient Vibration Values for Minimal Risk of Damage

Group	Type of Building	Peak Component Particle Velocity in Frequency Range of Predominant Pulse	
		4 Hz to 15 Hz	15 Hz and Above
1	Reinforced or framed structures. Industrial and heavy commercial buildings	50 mm/s at 4 Hz and above	
2	Unreinforced or light framed structures. Residential or light commercial type buildings	15 mm/s at 4 Hz increasing to 20 mm/s at 15 Hz	20 mm/s at 15 Hz increasing to 50 mm/s at 40 Hz and above

Note 1: Where the dynamic loading caused by continuous vibration may give rise to dynamic magnification due to resonance, especially at the lower frequencies where lower guide values apply, then the guide values may need to be reduced by up to 50%.

Table 9 Cosmetic Damage – DIN 4150 Guideline Values for Short-term Vibration on Structures

Group	Type of Structure	Guideline Values Vibration Velocity (mm/s)				
		Foundation, All Directions at a Frequency of			Topmost Floor, Horizontal	Floor Slabs, Vertical
		1 to 10 Hz	10 to 50 Hz	50 to 100 Hz	All frequencies	All frequencies
1	Buildings used for commercial purposes, industrial buildings and buildings of similar design	20	20 to 40	40 to 50	40	20
2	Residential buildings and buildings of similar design and/or occupancy	5	5 to 15	15 to 20	15	20

Group	Type of Structure	Guideline Values Vibration Velocity (mm/s)				
		Foundation, All Directions at a Frequency of			Topmost Floor, Horizontal	Floor Slabs, Vertical
		1 to 10 Hz	10 to 50 Hz	50 to 100 Hz	All frequencies	All frequencies
3	Structures that, because of their particular sensitivity to vibration, cannot be classified as Group 1 or 2 **and** are of great intrinsic value (eg heritage listed buildings)	3	3 to 8	8 to 10	8	20[1]

Note 1: It may be necessary to lower the relevant guideline value markedly to prevent minor damage.

4.3.1 Heritage Buildings or Structures

Heritage listed buildings and structures should be considered on a case-by-case basis but BS 7385 notes that buildings of historical value should not be assumed to be more sensitive to vibration, unless structurally unsound. Where a heritage building is deemed to be sensitive, the more stringent DIN 4150 Group 3 guideline values in **Table 9** can be applied.

Heritage Structures

Table 10 includes heritage structures from the State Heritage Register and Local Heritage Items from the Local Environment Plan that are within close proximity to the construction work areas for Junee Yard Precinct.

Table 10 Heritage Items Nearby Construction Work Areas

Heritage Item	Listing	Construction/Condition
Junee Station, Yard, and Locomotive Depot[1]	State Heritage Register 01173	The Junee Railway Station comprises a highly symmetrical, single storey building. The Junee Locomotive Depot/Roundhouse comprises a circular brick building split into two 'halves', with the internal structure laid out in a radial pattern from a central turntable.
Junee Railway refreshment rooms	Local Environmental Plan I10, State Heritage Register 01173	
Junee Court House[2]	Local Environmental Plan I3	Brick Court House and adjoining office wing in red brick laid in English bond with tuck pointed lower levels. The building has a gabled roof clad with corrugated iron, moulded chimneys and timber verandah at either side with decorative brackets to posts. Very high architectural quality.
Junee Post Office[2]	Stage Heritage Register 01425, Local Environmental Plan I6	The Junee Post Office a two storey building built of brick; the walls (with the exception of those at the rear) have been painted. The main roof is hipped and clad with corrugated iron. Three chimneys of face brick have render to their bases and moulded tops. Paired, decorative brackets support the eaves. There are brick flat arches over the windows, and there is slight emphasis to the window sills. Façade verandah to the ground floor has a low pitch roof clad with iron and paired cast iron posts. Generally in good condition, Paint work is good / well maintained.
Commercial Hotel[2]	Local Environmental Plan I5	Two storey hotel and verandah with four retail units at corner street location. Brick and render parapet with mouldings and tiles to base of external walls. Very high architectural quality
Former Westpac Bank, Bank of NSW[2]	Local Environmental Plan I4	Building has an elaborate shaped brick and plastered parapet over main entrance. Very high architectural quality.

Heritage Item	Listing	Construction/Condition
The Loftus[2]	Local Environmental Plan I7	Two storey brick and stucco building, with first floor balcony / awning over footpath. Listed to be in "excellent" physical condition.

Note 1 The Junee Locomotive Depot/Roundhouse (adjacent to Roedigers Lane) is beyond 400 m south of the closest Junee Yard Precinct work area, near Kemp Street.

Note 2 Description of construction/condition is provided in the NSW Government State Heritage Inventory

A large area around Junee Station, which includes industrial, residential and other-sensitive receivers, are part of the Junee Conservation Area. The Commercial Hotel, Junee Railway refreshment rooms, Former Westpac Bank, Junee Court House and The Loftus are within the Junee Conservation Area.

Further information on some of the heritage items in **Table 10** are provided in the Construction Cultural Heritage Management Plan (CCHMP). No structures nearby the work areas identified in this CNVIS are flagged as structurally unsound in the CCHMP.

Pre and post-condition surveys of heritage structures are to be conducted when relevant (ie if the heritage buildings are within the minimum working distances for heritage items for nominated vibration-intensive equipment) refer to **Section 4.3.3** and **Section 6.1**.

4.3.2 Buried Pipework and Utilities

The German Standard DIN 4150-3:1999 "Structural Vibration Part 3: Effects of vibration in structures" provides guideline values for evaluating the effect of vibration on buried pipework. The values are based on the assumption that pipes have been manufactured and laid using current technology. Additional considerations may be required at junctions. The recommended limits for short term vibration to ensure minimal risk of damage are presented numerically in **Table 11**.

Table 11 Guideline Values for Short Term Vibration on Buried Pipework

Line	Pipe Material	Guideline value at the Pipe[1,2] (PPV mm/s)
1	Steel (including welded pipes)	100
2	Clay, concrete, reinforced concrete, pre stressed concrete, metal (with or without flange)	80
3	Masonry, plastic[3]	50

Note 1: Mounting equipment directly onto pipes may not be possible. If the vibration source is not immediately next to the pipework, measurements can be made on the ground surface to obtain an estimate. Generally, this vibration level will be greater than the level measured directly on the pipework.

Note 2: The guideline values may be reduced by 50% without further analysis when evaluating the effects of long-term vibration on buried pipework.

Note 3: Drainpipes shall be evaluated using the values given for Line 3.

Buried Pipework and Utilities

No buried pipework or utilities have been identified in this CNVIS at risk of impact from vibration. Therefore, no additional consideration or assessment has been undertaken in relation to buried pipework and utilities. Where buried pipework or utilities are uncovered during works, they should be identified and managed in accordance with the measures outlined in the CNVMP.

4.3.3 Minimum Working Distances for Vibration Intensive Work

Minimum working distances for typical vibration intensive construction equipment have been sourced from the Transport for NSW (TfNSW) Construction Noise and Vibration Guideline

(Public Transport Infrastructure) (CNVG-PTI) and are shown in **Table 12**. The minimum working distances are for both cosmetic damage (from BS 7385 and DIN 4150) and human comfort (from the NSW EPA Assessing Vibration: a technical guideline). They are calculated from empirical data which suggests that where work is further from receivers than the quoted minimum distances then impacts are not considered likely.

The minimum working distances listed in the CNVG were used to derive the minimum working distances required for cosmetic damage to industrial and heavy commercial buildings (also reinforced or framed structures). The following pseudo-power law relationship has been used in the derivations:

$$V_2 = V_1 \times \left(\frac{D_1}{D_2}\right)^B$$

where a site exponent value of B = 1.6 is adopted for the calculations, as per AS2187.2:2006

Table 12 Recommended Minimum Working Distances from Vibration Intensive Equipment

Plant Item	Rating/Description	Minimum Distance			
		Cosmetic Damage			Human Response (NSW EPA Guideline)[2]
		Residential and Light Commercial (BS 7385)	Heritage Items[1] (DIN 4150, Group 3)	Industrial and Heavy Commercial (BS 7385)	
Vibratory Roller	<50 kN (1–2 tonne)	5 m	11 m	3 m	15 m to 20 m
	<100 kN (2–4 tonne)	6 m	13 m	3 m	20 m
	<200 kN (4–6 tonne)	12 m	25 m	6 m	40 m
	<300 kN (7–13 tonne)	15 m	31 m	8 m	100 m
	>300 kN (13–18 tonne)	20 m	40 m	10 m	100 m
	>300 kN (>18 tonne)	25 m	50 m	12 m	100 m
Small Hydraulic Hammer	300 kg (5 to 12 t excavator)	2 m	5 m	1 m	7 m
Medium Hydraulic Hammer	900 kg (12 to 18 t excavator)	7 m	15 m	4 m	23 m
Large Hydraulic Hammer	1,600 kg (18 to 34 t excavator)	22 m	44 m	11 m	73 m
Vibratory Pile Driver	Sheet piles	2 m to 20 m	5 m to 40 m	1 to 10 m	20 m
Piling Rig – Bored	≤ 800 mm	2 m (nominal)	5 m	1 m	4 m
Jackhammer	Hand held	1 m (nominal)	3 m	1 m	2 m
Ballast Tamping[2]	N/A	5 m	10 m	3 m	30 m

Note 1: Minimum working distances for heritage items that have been identified as structurally unsound or otherwise particularly sensitive to vibration. These distances have been calculated based on the 2.5 mm/s PPV criteria from DIN 4150 and the cosmetic damage minimum working distances presented in the CNVG-PTI with reference to BS 7385.

Note 2: Based on SLR measurement data. The human response minimum working distance for Ballast Tamping is determined based on a residential night-time preferred VDV criterion.

The minimum working distances are indicative and will vary depending on the particular item of equipment and local geotechnical conditions. The distances apply to cosmetic damage of typical buildings under typical geotechnical conditions.

4.4 Traffic on Surrounding Roads

The potential impacts from project related traffic on the surrounding public roads are assessed using the NSW EPA *Road Noise Policy* (RNP). An initial screening test is first applied to evaluate if existing road traffic noise levels are expected to increase by more than 2.0 dB. Where this is considered likely, further assessment is required using the RNP criteria shown in **Table 13**.

Table 13 RNP/NCG Criteria for Assessing Traffic on Public Roads

Road Category	Type of Project/Land Use	Assessment Criteria (dBA)	
		Daytime (7 am – 10 pm)	Night-time (10 pm – 7 am)
Freeway/ arterial/ sub-arterial roads	Existing residences affected by additional traffic on existing freeways/arterial/sub-arterial roads generated by land use developments	$L_{Aeq(15hour)}$ 60 (external)	$L_{Aeq(9hour)}$ 55 (external)
Local roads	Existing residences affected by additional traffic on existing local roads generated by land use developments	$L_{Aeq(1hour)}$ 55 (external)	$L_{Aeq(1hour)}$ 50 (external)

5.0 Noise Assessment

The potential construction noise levels from the Project have been predicted using ISO 9613:2 algorithm in SoundPLAN noise modelling software. The model includes ground topography, buildings and representative noise sources from the Project.

5.1 Work Scenarios

Noise modelling scenarios have been determined based on key Project noise generating stages, supplied by the Project team. A detailed description of each work scenario and the total sound power levels (L_W) are provided in **Table 14**.

A summary of construction work periods, schedule required for each scenario and the total sound power levels (Lw) are provided in **Table 15**. The locations of the various work scenarios are shown in **Figure 2**.

Table 14 Work Scenario Descriptions

ID	Scenario	Description	Total Lw
W.001	Site Establishment / Demobilisation	Site Compound delivery and set up Laydown and haul road construction	115
W.002	Compound Operation	Operation of the site compound Delivery of materials/equipment	113
W.003	Geotechnical Investigation	Geotechnical Investigation	114
W.004	Driver Platform Surveys	Design and geotechnical investigations	113
W.005	Driver Platform Construction	Construction of driver platforms	116
W.006	Track Work - Peak	Track Work including highly noise intensive work	122
W.007	Track Work - Typical	Track Work excluding highly noise intensive work	117
W.008	Track Tamping	Tamping following track work	119
W.009	Gantry Removal	Gantry Removal	118
W.010	Signalling Work	Installation of Signalling Infrastructure	113
W.011	Pedestrian Bridge Removal	Removal of existing pedestrian bridge	119
W.012	Signalling Cable Works	Installation of new signalling cable route & signalling cable	112

Table 15 Scenarios and Periods of Work

ID	Scenario	Hours of Work				Indicative Start Date	Likely Duration[5]
		Approved Hours	Out-of-Hours Work[4]				
			Day OOH[1]	Evening[2]	Night[3]		
W.001	Site Establishment / Demobilisation	✓	✓	-	-	Feb-26	1 month
W.002	Compound Operation	✓	✓	✓	✓	Feb-26	6 months[6]
W.003	Geotechnical Investigation	✓	✓	-	-	Aug-26	1 month
W.004	Driver Platform Surveys	✓	-	-	-	Jul-25	1 week
W.005	Driver Platform Construction	✓	✓	✓	✓	Aug-25	2 months
W.006	Track Work - Peak	✓	✓	✓	✓	Aug-25	6 months[6]
W.007	Track Work - Typical	✓	✓	✓	✓	Aug-25	6 months[6]
W.008	Track Tamping	✓	✓	✓	✓	Sep-25	6 months[6]
W.009	Gantry Removal	✓	✓	✓	✓	Sep-26	1 month
W.010	Signalling Work	✓	✓	✓	✓	Sep-26	2 months
W.011	Pedestrian Bridge Removal	✓	✓	-	-	Feb-26	2 months
W.012	Signalling Cable Works	✓	✓	✓	✓	Sep-25	4 months

Note 1: Daytime out of hours is 8 am to 6 pm on Sunday and public holidays.

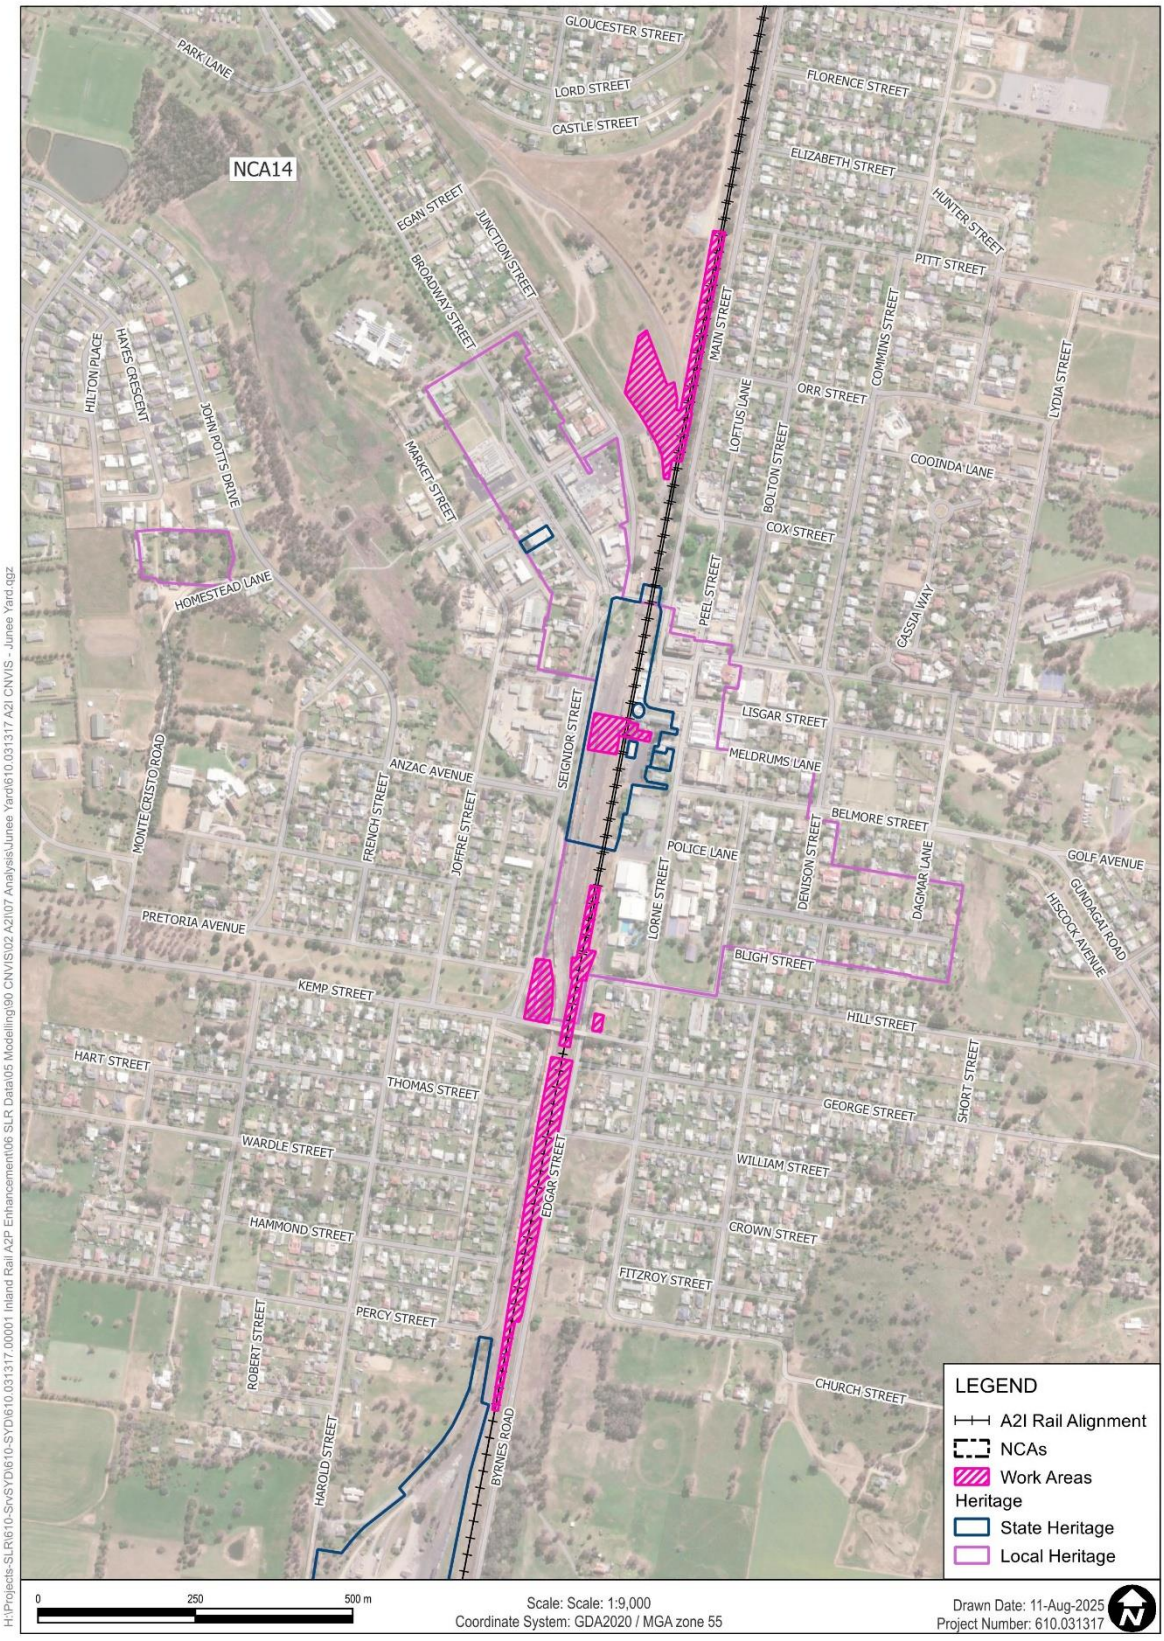

Note 2: Evening is 6 pm to 10 pm Monday – Sunday (including public holidays).

Note 3: Night is 10 pm to 7 am Monday – Saturday and 10pm to 8am Sunday (including public holidays).

Note 4: Where works are expected to occur outside of the standard working hours, further detail around the specific work tasks, duration and justification of OOHW must be identified in the OOHW permit, required by the OOHW Protocol or EPL.

Note 5: Works scenarios may occur simultaneously during enhancement works with works expected to be conducted over a six month period. Track work, track tamping and associated compound operation will be conducted during rail possessions over the six month period, however will not be conducted continuously during this period.

Figure 2 Construction Work Locations

5.1.1 Modelling Scenarios and Equipment

The assessment uses 'realistic worst-case' scenarios to determine the impacts from the noisiest 15-minute period that is likely to occur for each work scenario, as required by the ICNG. Sound power levels (LW) for the construction equipment used in the modelling are listed in **Appendix B**.

5.2 Predicted Noise Levels

The following overview is based on the predicted impacts at the most affected receivers and is representative of the worst-case noise levels that are likely to occur during construction.

The assessment shows the predicted 'mitigated' impacts based on the exceedance of the noise management levels, as per the categories in **Table 16**. The mitigation and management measures adopted for this CNVIS are provided in **Section 8.0**.

Table 16 Exceedance Bands and Impact Colouring

Subjective Classification	Exceedance of Noise Management Level		Impact Colouring
	Daytime	Out of Hours	
Negligible	No exceedance	No exceedance	
Noticeable	-	1 to 5 dB	
Clearly Audible	1 to 10 dB	6 to 15 dB	
Moderately Intrusive	11 to 20 dB	16 to 25 dB	
Highly Intrusive	> 20 dB	> 25 dB	

A summary of the number of buildings where NML exceedances were predicted for the various work scenarios is shown in **Table 17**. The number of receivers above the 'highly noise affected' (HNA) level are also included in the table. Maps of the predicted worst-case noise impacts are presented in **Appendix C**.

The assessment presents the combined predicted noise impacts for each scenario. Meaning, the worst-case result at each receiver is considered from all potential work areas where each scenario is to be undertaken.

The assessment is generally considered conservative as the calculations assume several items of construction equipment are in use at the same time within individual scenarios. As outlined in **Section 5.1.1,** the assessment uses 'realistic worst-case' scenarios to determine the impacts from the noisiest 15-minute period that is likely to occur for each work scenario.

The exceedances shown in **Table 17** are therefore representative of a 'realistic worst-case' 15-minute period, and are unlikely to occur for extended periods of time throughout the entire construction period at any given receiver.

The indicative work durations presented in **Table 15** represent a window of time where the scenarios could occur, and does not represent the entire duration of the exceedances shown in **Table 17**. In reality, there would frequently be periods when construction noise levels are much lower than the worst-case levels predicted as well as times when no equipment is in use and no noise impacts occur.

Table 17 Overview of NML Exceedances

ID	Scenario	Number of Receivers																		
		HNA[1]	With NML exceedance (dB)[2]																	
			Approved Daytime			Out of Hours													Sleep Disturbance	Sleep Awakening
						Daytime OOH				Evening				Night-time						
			1-10 dB	11-20 dB	>20 dB	1-5 dB	6-15 dB	16-25 dB	>25 dB	1-5 dB	6-15 dB	16-25 dB	>25 dB	1-5 dB	6-15 dB	16-25 dB	>25 dB	>Screening Level (52 dB)	>65 dB

Note 1: Highly noise affected, based on ICNG definition (i.e. predicted LAeq(15minute) noise at residential receiver is greater than 75 dBA).
Note 2: Based on worst-case predicted noise levels

A summary of the predicted worst-case noise levels is shown below for each work area:

Residential Receivers

- 'Highly Intrusive' noise impacts are predicted at the closest residential receivers for all work scenarios during both the approved daytime and daytime OOHW periods with the exception of *W.009* and *W.011* where worst-case 'moderately intrusive' noise impacts are predicted at the closest residential receivers.
- 'Highly Intrusive' noise impacts are predicted for all work scenarios with the potential to occur during the evening and night-time period, with the exception of *W.009* during the evening period where worst-case 'moderately intrusive' noise impacts are predicted. The addresses of the residential receivers impacted by OOHW are provided in **Appendix D**.
    - Compound operations outlined in *W.002* are generally expected to be limited to approved daytime hours. OOHWs presented in **Table 17** are only expected when construction works are being undertaken under a rail possession.
- A single receiver closest to the Junction Street site compound (2 Crawley St) is predicted to be 'highly noise affected' (HNA) during work for scenarios *W.001* and *W.002*.
    - This receiver is also predicted to be HNA during signalling works during *W.010*.
- During peak track works including noise intensive plant (*W.006),* it is predicted that 20 residential receivers will be HNA. During typical track works without noise intensive plant (*W.007*), two receivers are predicted to be HNA.
- Seven receivers are also predicted to be HNA during track tamping works during *W.008.*
    - The HNA impacts predicted during *W.006* to *W.008* are expected be experienced when work occurs at the closest work location to each receiver. When work occurs further from these receivers, impacts are expected to be lower
- Noise levels are predicted to exceed the sleep disturbance screening level and sleep awakening criteria for all work scenarios occurring during the night-time period. Sleep disturbance impacts would generally be caused by heavy vehicle movements and more noise intensive equipment. Where reasonable and feasible, these activities should be limited to the less sensitive periods to avoid noise impacts during more sensitive out-of-hours periods (refer to **Section 8.0**). The number of awakening events would depend on several factors, including the equipment being used, the duration of noisy work and the distance of the work to each residential receiver. Further detail around the specific OOHW, (eg duration and justification) must be identified in the OOHW permit, refer **Section 2.4**.

Other Sensitive Receivers

- 'Moderately Intrusive' noise impacts are predicted from all work scenarios during approved daytime hours, except *W.004* and *W.012*, where worst-case 'clearly audible' noise impacts are predicted.
    - 'Highly intrusive' impacts are predicted at the nearest sensitive receivers during approved daytime hours for scenarios *W.006* to *W.008*.
- During the daytime OOH period, 'highly intrusive' impacts are predicted at the closest other sensitive receiver during *W.006* only.
    - 'Clearly audible' to 'Moderately intrusive' impacts are predicted at the nearest other sensitive receivers for all other scenarios during daytime OOHW period.

- ‘Moderately Intrusive’ noise impacts are predicted to occur for *W.006* to *W.008* during the evening period, with no ‘highly Intrusive’ noise impacts predicted for all works scenarios occuring duirng this period.
    - ‘Clearly audible’ impacts are predicted during the evening period for *W.002, W.009* and *W.010*. No impacts are predicted at other sensitive receivers in the evening period during *W.005* and *W.012.*
- A single ‘other sensitive’ receiver is predicted to experience ‘highly intrusive’ noise levels during night-time hours for work scenarios *W.002* and *W.006* to *W.009*. Worst-case ‘clearly audible’ noise impacts are predicted during the night-time period for *W.005*, *W.010* and *W.012.*
    - The ‘highly intrusive’ noise impacts identified above during the night-time are predicted at the Locomotive Hotel, 1-5 Hill St, Junee.
- Other sensitive receivers should only be considered impacted ‘when in use’.

Review of the predictions shows that both the sleep disturbance screening level and sleep awakening reaction level are likely to be exceeded when night work occurs near residential receivers. The receivers which would potentially be affected by sleep awakening impacts are generally the same receivers where ‘moderately intrusive’ and ‘highly intrusive’ night-time impacts have been predicted (refer to **Appendix C**). These receivers may be eligible for respite offers (RO), agreements with owners (AO) or alternative accommodation (AltA), refer **Section 8.3**.

Furthermore, for scenarios where 'highly intrusive' impacts are predicted, noisy activities will be scheduled during standard daytime hours, where feasible, to minimise disruption during OOHW periods. It is noted however, that OOH work will occur during a rail possession and will be undertaken within the limitations of the possession.

All appropriate feasible and reasonable construction noise mitigation measures will be applied to work as outlined in **Section 8.0**.

5.3 Ground-borne Noise

Ground-borne construction noise impacts from the Project are not anticipated as vibration intensive work with the potential to generate perceptible ground-borne noise, is not included in the scope of work. Vibration intensive work for the Project will be completed outdoors meaning airborne noise levels at the nearest receivers are expected to be higher than the corresponding internal ground-borne noise levels.

Where airborne noise levels are higher than ground-borne noise levels it is not necessary to evaluate potential ground-borne noise impacts and as such, they have not been considered further for this assessment.

6.0 Vibration Assessment

Vibration intensive items of equipment that would be required during work assessed in this CNVIS include a vibratory roller, ballast tamper and hydraulic hammer. These items of equipment are required during the work as shown in **Table 18**.

The potential impacts during vibration intensive work have been assessed using the Transport CNVG-PTI minimum working distances for cosmetic damage and human response shown in **Table 18**.

Table 18 Vibration Intensive Equipment

ID	Scenario	Rating/Description	Minimum Distance			
			Cosmetic Damage			Human Response (NSW EPA Guideline)
			Residential and Light Commercial (BS 7385)	Heritage Items (DIN 4150, Group 3)	Industrial and Heavy Commercial (BS 7385)	
W.003	Geotechnical Investigation	Vibratory Roller (5rench): <50 kN (1–2 tonne)	5 m	11 m	3 m	15 m to 20 m
W.006	Track Work - Peak	Vibratory Roller: <300 kN (7–13 tonne)	15 m	31 m	8 m	100 m
W.008	Track Tamping	Ballast Tamping	5 m	10 m	3 m	30 m
W.011	Pedestrian Bridge Removal	Small Hydraulic Hammer: 300 kg (5 to 12 t excavator)	2 m	5 m	1 m	7 m

Vibration offset distances have been determined from the TfNSW CNVG-PTI minimum working distances for cosmetic damage and human comfort (see **Table 12** and the assessment is summarised in **Figure 3** to **Figure 6**). The offset distances are representative of the highest vibration levels that would likely be experienced by the nearest receivers when work occurs nearby.

For most construction activities, vibration emissions are intermittent in nature and for this reason, higher vibration levels occurring over shorter time periods are allowed.

In the event that additional work is undertaken which requires the use of other items of plant identified than those identified in **Table 18**, a vibration impact assessment must be conducted prior to the commencement of work.

Figure 3 Construction Vibration Minimum Working Distances – Vibratory Roller (Trench) <50 kN (1-2 tonne) (W.003)

Figure 4 Construction Vibration Minimum Working Distances – Vibratory Roller <300 kN (7-13 tonne) (W.006)

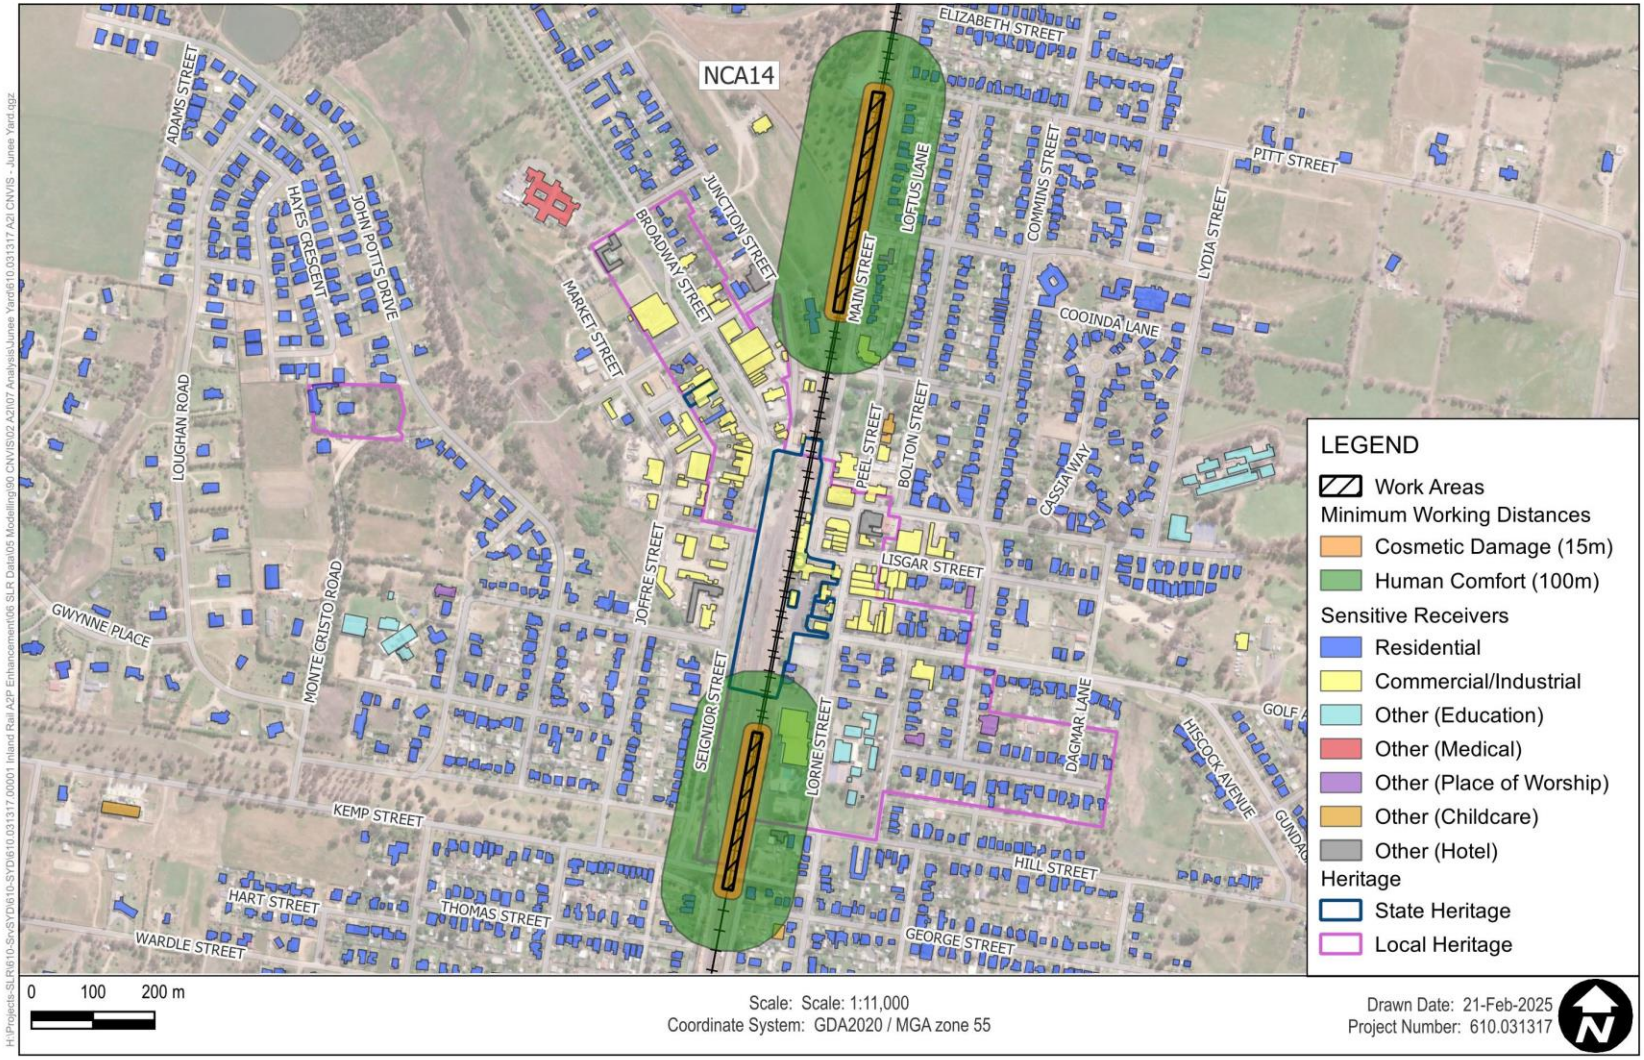

Figure 5 Construction Vibration Minimum Working Distances – Ballast Tamping (W.008)

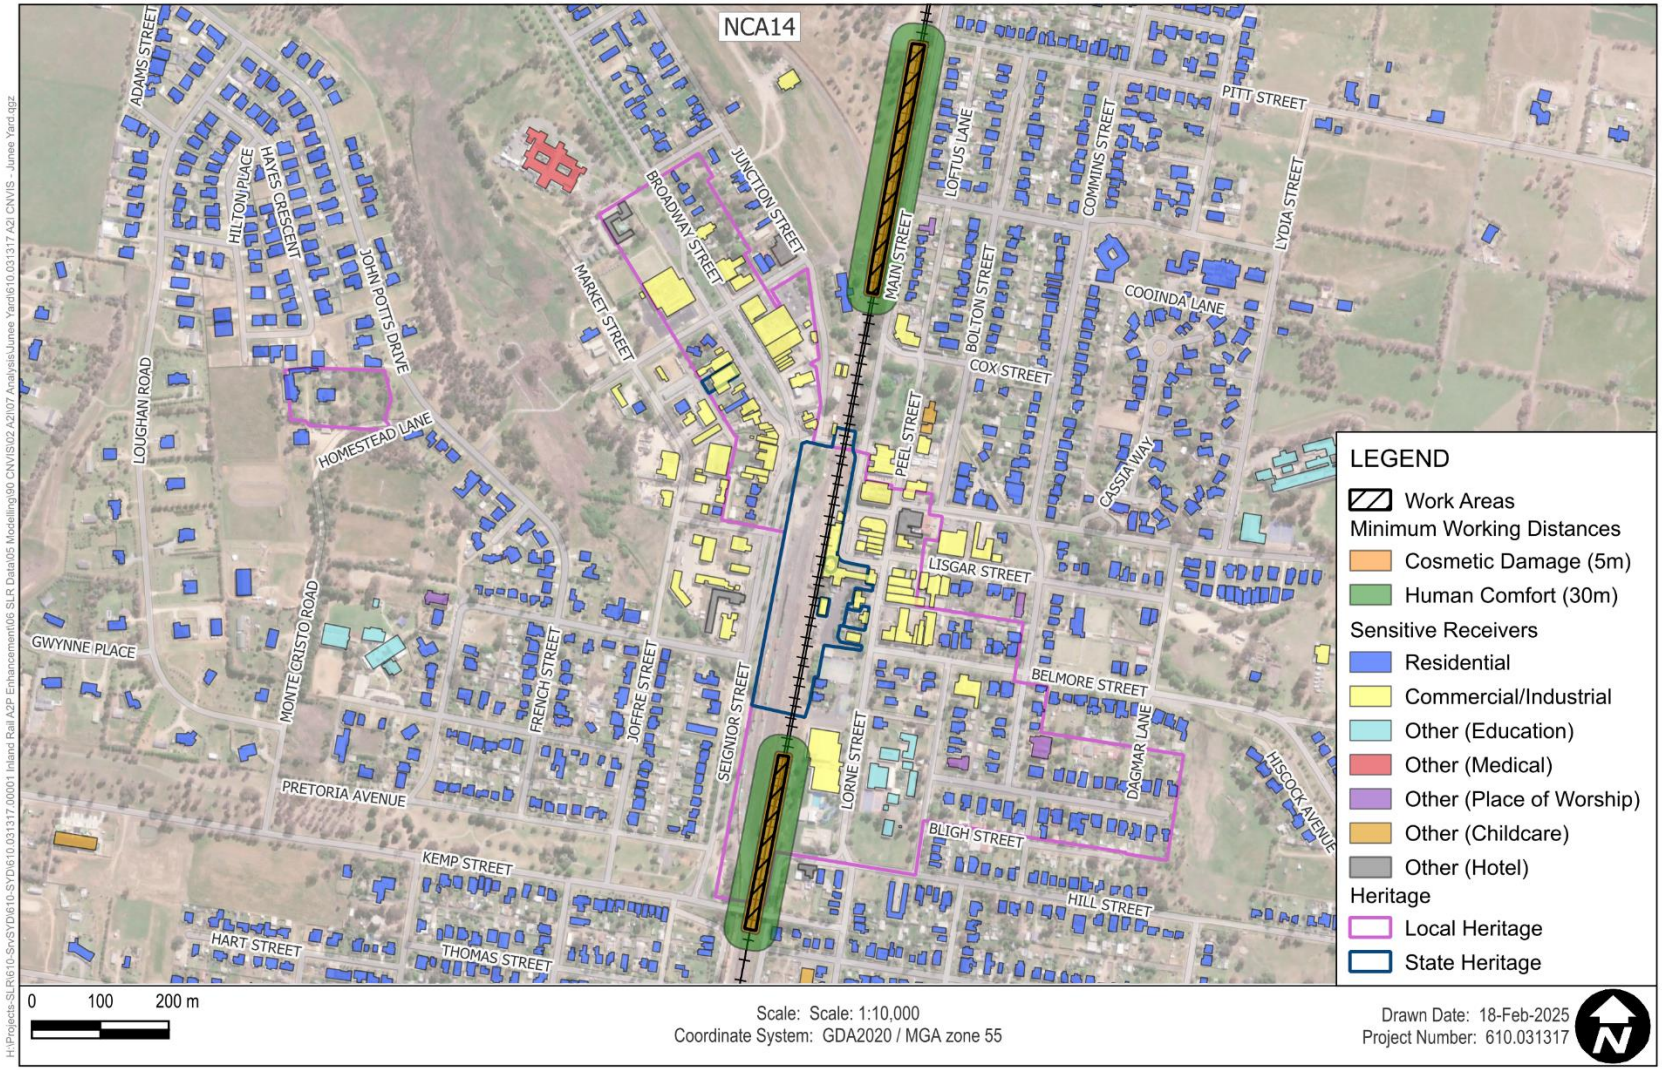

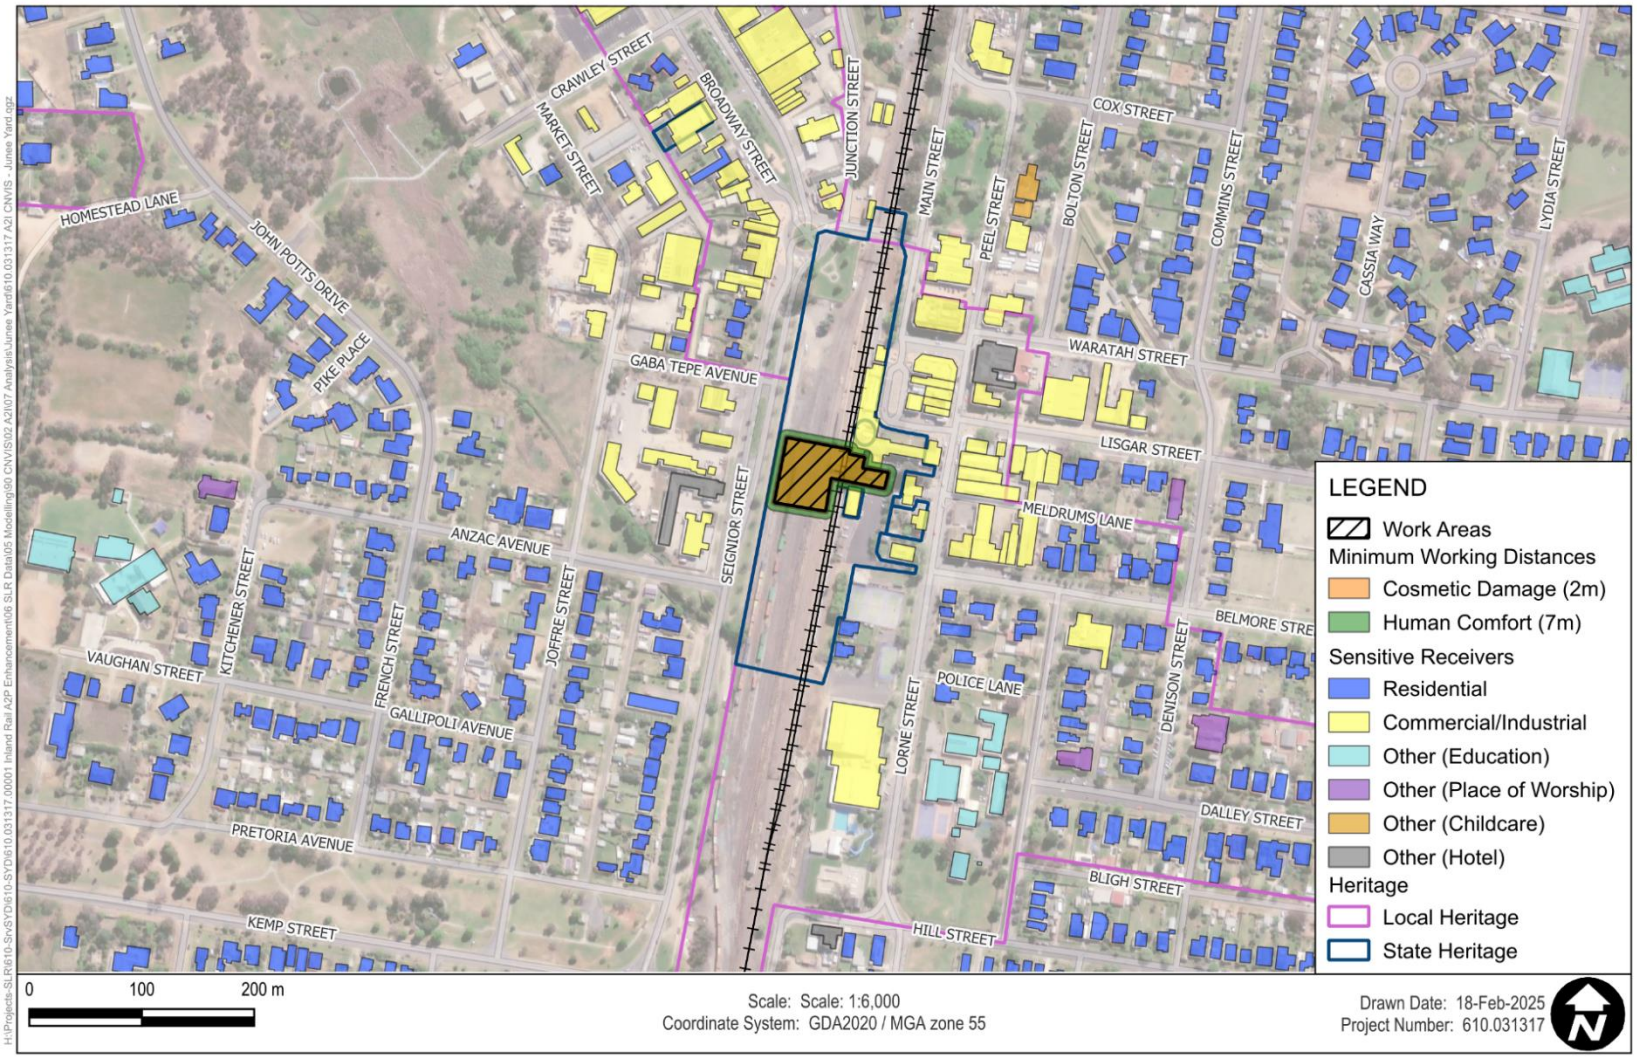

Figure 6 Construction Vibration Minimum Working Distances – Small Hydraulic Hammer (300 kg) (W.011)

6.1 Cosmetic Damage Assessment

Figure 4 shows that all nearby buildings are expected to fall outside the minimum working distance for cosmetic damage for trench rolling (vibratory) works required during *W.003* (**Figure 3**), vibratory rolling associated with peak track works *(W.006)* and ballast tamping required for *W.008* (**Figure 5**).

Figure 6 shows that Junee Railway Station is within the cosmetic damage minimum working distance for light commercial structures during the use of the hydraulic hammer in *W.011*. It is noted that the pedestrian bridge being removed in *W.011* is located on the Junee Station platform in close proximity to the Junee Station building.

Offset distances from specific vibration intensive plant to the nearest receivers and building construction should be confirmed before commencing vibration intensive work during construction.

Before commencement of any work, a structural engineer must undertake condition surveys of all building, structures, utilities and the like identified as being at risk of damage. For this CNVIS, conditions surveys are recommended for:

- Junee Railway Station.

After completion of construction, condition surveys must be undertaken by a structural engineer of all items for which pre-condition surveys were undertaken.

The results of the surveys must be documented in a Condition Survey Report for each item surveyed. Copies of Condition Survey Reports must be provided to the landowners of the items surveyed, and no later than one month before the commencement of construction and three months following the completion of construction.

Feasible and reasonable construction vibration mitigation measures should be applied where vibration intensive work is required within the minimum working distances. Construction vibration mitigation and management measures are discussed in **Section 8.0**.

In accordance with CoA E122, property damage caused directly or indirectly by the construction or operation must be rectified at no cost to the owner. Alternatively, compensation may be provided for the property damage as agreed with the property owner.

Heritage Structures

The pedestrian bridge being removed connects the operational Down Platform with the disused Up Platform. As the Up platform is no longer in use, the footbridge is no longer required for its access and is required to be removed. The footbridge itself is not heritage listed but is viewed as part of the wider State heritage listed item for the Station, yard and locomotive depot. As discussed above, the Junee Railway Station building, listed on the State Heritage Register, falls within the minimum working distances for residential and light commercial buildings when using a hydraulic hammer during *W.011*.

As per CoA E80, vibration testing must be undertaken before and during vibration generating activities that have the potential to impact on heritage items to identify minimum working distances to prevent cosmetic damage. Advice must be sought on methods and locations for installing equipment as per CoA E81.

If other vibration intensive activities are required within minimum working distances to heritage structures, a building condition assessment should be undertaken of the heritage item/s to assess if they are considered to be sensitive to vibration prior to vibration work commencing.

6.2 Human Comfort Assessment

Figure 4 shows that receivers within close proximity of the works areas have the potential to fall within the human comfort minimum working distances when vibratory rollers are in use nearby in *W.006*. When a trench roller (vibratory) is in use during *W.003*, all receivers fall outside the human comfort minimum working distances as shown in **Figure 3**.

Figure 5 shows that the closest residential receivers fall within the human comfort minimum working distance for track tamping (*W.008*). The commercial structures and residences identified within the minimum working distances have been previously exposed to track tamping activities during standard periodic maintenance of the track.

Figure 6, shows that small areas of the Junee Railway Station buildings either side of the pedestrian bridge fall within the human comfort minimum working distance when a small hydraulic hammer is used during *W.011*.

The occupants of buildings discussed above may be able to perceive vibration impacts at times when vibration-sensitive equipment is in use nearby. Where impacts are perceptible, they would likely only be apparent for relatively short durations when vibration intensive equipment is in use nearby.

Feasible and reasonable construction vibration mitigation measures should be applied where vibration intensive work is required within the minimum working distances. Construction vibration mitigation and management measures are discussed in **Section 8.0**.

7.0 Construction Traffic Assessment

The EIS identified that during the construction phase of the project, heavy vehicles would be required for materials and equipment delivery while light vehicles will transport workers to and from the site. This additional road traffic may impact receivers along the proposed transport routes.

No additional information has been provided regarding construction road traffic, therefore a summary of the predicted daytime traffic noise levels from the EIS is shown in **Table 19**.

Table 19 Construction Traffic Assessment

Traffic Route	Road Type	Predicted Construction Traffic Noise (Both Directions) LAeq (Period)		Exceed base criterion? Day[1] (7am – 10pm)	Potential Increase > 2dB	Potential Noise Impact
		Existing	Existing + Proposed			
Junee Precinct						
Junee Station, Junee Yard and Kemp Street Bridge						
Olympic Highway (west of Seignior Street)	Arterial	57.6	59	No	No	No
Seignior Street	Sub-arterial	52.7	54	No	No	No
Broadway Street	Arterial	53	54.1	No	No	No
Olympic Highway Level Crossing	Sub-arterial	50.9	52.5	No	No	No
Humphrys Street	Sub-arterial	43.1	45.8	No	Yes	No
Main Street (Olympic Highway)	Sub-arterial	42.8	45.5	No	Yes	No
Lorne Street	Local	56.4	57.5	Yes	No	No
Hill Street	Local	51.1	53.3	No	Yes	No
Joffre Street	Local	41.7	45.4	No	Yes	No
Harold Street	Local	53	54.8	No	No	No
Thomas Street	Local	40.5	45	No	Yes	No
Railway Lane	Local	40.2	43.9	No	Yes	No
Railway Parade	Local	40.2	43.9	No	Yes	No
William Street	Sub-arterial	39.6	44.2	No	Yes	No
Edgar Street	Arterial	47.3	49.5	No	Yes	No
Byrnes Road	Local	56.6	57.5	Yes	No	No
Pretoria Avenue	Local	40.6	45	No	Yes	No

Note 1: Freeway/arterial/sub-arterial roads: $L_{Aeq(15hour)}$ 60dBA(external)
Local roads: $L_{Aeq(1hour)}$ 55dBA (external)

The EIS found that construction traffic associated with the Junee Yard Precinct on public roads complies with the road traffic noise goals during the daytime period.

The EIS did not assess construction traffic during the night-time period, and no additional information has been provided regarding construction road traffic. Therefore, it is conservatively assumed that where night-time construction traffic is required, impacts would be experienced by residences along construction routes on sub-arterial and local roads within close proximity to the work sites. Night-time noise impacts are not anticipated on arterial roads.

Traffic diversions are not proposed for the work assessed in this CNVIS. Extended traffic diversions are not expected for these works, and any necessary diversions will be confined to daytime hours. Should night-time diversions be required for construction activities, a more detailed assessment will be undertaken and provided.

Mitigation and management measures to assist in minimising noise impacts from construction traffic are shown in **Section 8.0**.

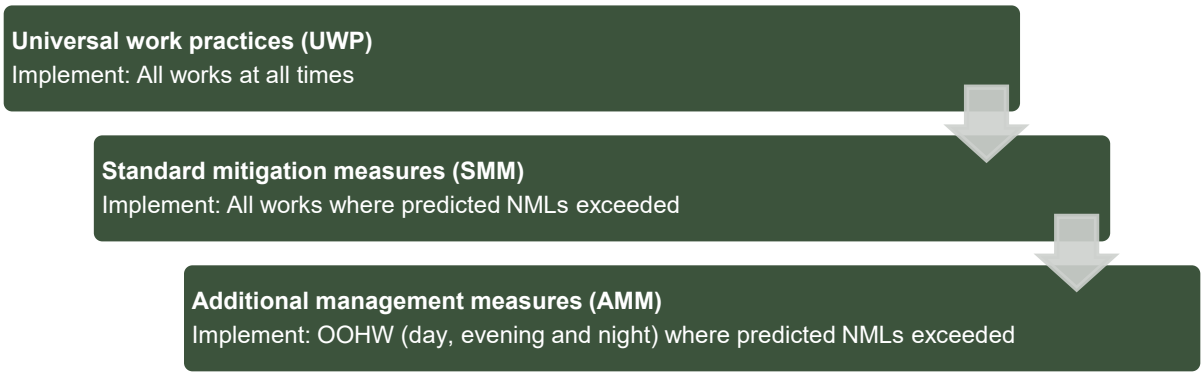

8.0 Mitigation and Management Measures

Noise from the Project may be apparent at the nearest receivers at certain times during the construction of the Project. The Project should apply all feasible and reasonable mitigation measures to minimise the impacts.

In accordance with CoA E74, works that exceed the noise management levels and/or vibration criteria must be managed in accordance with the CNVMP.

The Inland Rail NSW Construction Noise and Vibration Framework (CNVF) has been adopted as a guideline for this project and outlines a hierarchy of work practices and mitigation measures to minimise the impact of construction noise and vibration on the community. This hierarchy is shown in **Figure 7**.

Figure 7 Hierarchy of Work Practices and Mitigation Measures

The universal work practices (UWP) and standard mitigation measures (SMM) for the overall A2I project are outlined in the CNVMP. All mitigation and management measures outlined in the CNVMP will be adopted in accordance with CoA E74. Site specific mitigation measures are outlines below in **Section 8.1**. These measures have been incorporated into the noise modelling assessment to provide mitigated results. Additional Management Measures (AMM) are outlined in **Section 8.3**.

8.1 Site Specific Mitigation Measures

Table 20 outlines the mitigation and management measures that will be adopted to minimise potential noise and vibration impacts associated with this CNVIS at surrounding sensitive receivers. These measures have been considered in noise modelling based on the total scenario sound power levels, refer **Appendix B**.

Table 20 Site Specific Mitigation Measures

Measure	Reference / Notes
Project Planning	
Use quieter and less vibration emitting construction methods where feasible and reasonable.	Best practice
Works will be completed during the approved daytime construction hours where possible, as outlined in **Section 2.2.** Some unavoidable OOHW will be required due to road and rail traffic management restrictions, as outlined in **Section 2.3**.	Best practice CoA E69 CoA E71
Where OOHW is required, an OOHW Permit will be prepared, as required by the OOHW Protocol or EPL. Further detail around the specific work tasks, duration and justification of OOHW must be identified in the OOHW permit.	Best practice CoA E71 CoA E72 CoA E73
Scheduling	
Highly noise intensive works that result in an exceedance of the applicable NML at the same receiver must only be undertaken: a) Between 08:00am – 06:00pm Monday to Friday; b) Between 08:00am – 01:00pm Saturday; and c) if continuously, then not exceeding three (3) hours, with a minimum cessation of work of not less than one hour. Refer **Section 2.2.1**.	Best practice CoA E70
Noise generating work in the vicinity of community, religious, educational institutions, noise and vibration-sensitive businesses and critical working areas (such as exam halls, theatres, laboratories and operating theatres) resulting in noise levels above the NMLs will not be timetabled during sensitive periods, unless other reasonable arrangements with the affected institutions can be made at no cost to the affected institution. Refer to Community Consultation in **Section 8.5**.	Best practice CoA E76
All work undertaken for the delivery of the project including those undertaken by third parties (such as utility relocations), must be coordinated to ensure respite periods are provided.	Best practice, CoA E83
Where feasible: • Limit noise generating work outside of standard construction hours as much as possible • Limit noise generating work on the weekends as much as possible • Construction works should be completed as soon as possible. Refer to Community Consultation in **Section 8.5**.	Best practice, CoA E78
Site Layout	
Compounds and worksites have been designed to promote one-way traffic and minimise the need for vehicle reversing.	Best practice
Construction activities must be planned to minimise vehicle movements around the Site.	
Work compounds, parking areas, and equipment and material stockpiles would be positioned away from noise-sensitive locations and take advantage of existing screening from local topography.	

Measure	Reference / Notes
Equipment that is noisy would be started away from sensitive receivers	
Training	
Training will be provided to all personnel on noise and vibration requirements for the project. Inductions and toolbox talks to be used to inform personnel of the location and sensitivity of surrounding receivers.	Best practice
The induction protocols must include awareness of noise generating activities and mitigation measures and techniques that should be implemented.	
Training must be conducted for appropriate community behaviours when access/egress the Site.	
Plant and Equipment Source Mitigation	
All plant and equipment must be maintained in a proper and efficient condition, operated in a proper and efficient manner, and feature standard noise reduction measures where applicable.	Best practice CNVF
Plant and equipment must be selected that can be fitted with options to minimise noise such as covers, mufflers, shrouds and other noise suppression equipment. Low noise emission plant and equipment must be selected where available. These considerations have been included in noise modelling based on the equipment sound power levels, refer **Appendix B**.	
Tonal movement alarms (beepers) will be replaced with non-tonal alarms (squawkers) on all equipment in use (subject to occupational health and safety requirements).	
Stationary noise sources will be sited behind structures (or temporary screens) that act as barriers, or at the greatest distance from the noise-sensitive area (where practicable). Equipment will be oriented so that noise emissions are directed away from any sensitive areas.	
Noise generating equipment will be regularly checked and effectively maintained, including checking of hatches/enclosures regularly to ensure that seals are in good condition and doors close properly against seals.	
Noise monitoring spot checks of equipment will be completed to ensure individual items are operating as expected	
Dropping materials from a height will be avoided.	
Loading and unloading will be carried out away from noise sensitive areas, where practicable.	
Alternative construction methods have been considered and adopted for certain activities such as smaller hydraulic hammers pedestrian bridge removal and static rolling during site establishment works (refer **Section 6.0**).	Best practice
Construction Traffic	
Construction traffic routes to site will be limited to major roads where possible.	Best practice
Trucks will not queue outside residential properties.	
Truck drivers will be instructed to avoid compression braking as far as practicable.	
Delivery vehicles should be fitted with straps rather than chains for unloading, wherever possible.	
Truck movements will be kept to a minimum (ie trucks are fully loaded on each trip).	
Screening	
Install purpose-built screening or enclosures around long-term fixed plant that has the potential to impact nearby receivers	Best practice

Measure	Reference / Notes
The layout of the site will take advantage of existing screening from local topography, where possible. Site huts, maintenance sheds and/or containers will be positioned between noisy equipment and the affected receivers.	CNVF
Implementation of temporary noise barriers for highly intensive noise activities, such as saw cutting or rock breaking.	
Community Consultation	
Regular communications on the activities and progress of the proposal shall be provided to the community (eg via newsletter, email and/or website).	Best practice CNVF
A telephone, email and web-based community information service shall be established to allow the community to obtain additional information on construction activities, provide feedback or make a complaint.	Best practice CNVF
Owners and occupiers of properties at risk of exceeding the screening criteria for cosmetic damage (and/or human comfort) must be notified before work that generates vibration commences in the vicinity of those properties. If the potential exceedance is to occur more than once or extend over a period of 24 hours, owners and occupiers are to be provided a schedule of potential exceedances on a monthly basis for the duration of the potential exceedances, unless otherwise agreed by the owner and occupier.	Best practice CoA E79
Personalised communication and respite offers will be provided to all receivers that are predicted to be highly noise affected (HNA).	Best practice
Notification will be provided to all impacted residences along construction traffic routes (including temporary diversions).	Best practice
Where complaints are received, work practices will be reviewed and feasible and reasonable practices applied to minimise any further impacts.	Best practice
Monitoring	
Noise and/or vibration monitoring will be conducted (as appropriate) when noise/vibration intensive works are being undertaken in close proximity to sensitive receivers.	Best practice CNVF CoA E80 CoA E81
Noise and vibration monitoring will be undertaken in accordance with the CNVMP and Monitoring Program.	
Advice from a heritage specialist must be sought on methods and locations for installing equipment used for vibration, movement and noise monitoring at heritage-listed structures.	
See **Section 8.7** or details of monitoring requirements.	
Vibration	
If vibration generating works are required within the minimum working distances and considered likely to exceed the criteria: • Different construction methods with lower source vibration levels will be investigated and implemented, where feasible (refer **Table 12**). • Attended vibration measurements will be undertaken at the start of the works to determine actual vibration levels of the item. Vibration intensive works will cease if the monitoring indicates vibration levels are likely to, or do, exceed the relevant cosmetic damage criteria. Work methods will be modified prior to recommencing the activity. Note: Where feasible, small hydraulic hammers and small vibratory rollers or static rolling will be prioritised to reduce vibration impacts to surrounding receivers.	Best practice CoA E80
Vibration intensive works required within the minimum working distance at the same receiver must only be undertaken: a) Between 08:00am – 06:00pm Monday to Friday; b) Between 08:00am – 01:00pm Saturday; and	Best practice CoA E70

Measure	Reference / Notes
c) if continuously, then not exceeding three (3) hours, with a minimum cessation of work of not less than one hour. Refer to **Section 2.2.1**.	
Where works are required within the cosmetic damage minimum working distances, building condition surveys will be completed before and after the works to ensure no cosmetic damage has occurred. Heritage status of all structures that fall within the unsound heritage minimum working distance for the nominated vibration-intensive equipment should be confirmed prior to the commencement of works.	Best practice CoA C9
Property damage caused directly or indirectly (for example from vibration or from groundwater change) by the construction or operation must be rectified at no cost to the owner. Alternatively, compensation may be provided for the property damage as agreed with the property owner.	Best practice CoA E122

8.2 Respite

In accordance with CoA E70, except as permitted by an EPL, highly noise intensive works that result in an exceedance of the applicable NML at the same receiver must only be undertaken:

a) Between 08:00am – 06:00pm Monday to Friday;

b) Between 08:00am – 01:00pm Saturday; and

c) if continuously, then not exceeding three (3) hours, with a minimum cessation of work of not less than one hour.

For the purposes of this condition, 'continuously' includes any period during which there is less than one hour between ceasing and recommencing any of the work.

In accordance with CoA E72 and E83, the procedure outlined in the OOHW Protocol must be implemented to coordinate OOHW (including those approved by an EPL or undertaken by a third party), to ensure appropriate respite is provided. This coordination must include:

a) rescheduling work to provide respite to impacted noise sensitive land use(s) so that the respite is achieved; or

b) the provision of alternative respite or mitigation to impacted noise sensitive land use(s); and

c) the provision of documentary evidence to the AA in support of any decision made in relation to respite or mitigation.

The consideration of respite must also include all other CSSI, SSI and SSD projects which may cause cumulative and/or consecutive impacts at receivers affected by the delivery of the CSSI.

Highly noise intensive works (as defined in **Section 2.2.1**) are required in various work scenarios. As outlined above, highly noise intensive work that results in an exceedance of the applicable NML is restricted to the hours shown above and must have respite periods as defined above.

CoA E70 applies to the following work scenarios where highly noise intensive works are proposed and the NML is predicted to be exceeded: CoA E70 applies to the following work scenarios where highly noise intensive works are proposed and the NML is predicted to be exceeded:

- W.003 – Geotechnical Investigation
- W.005 – Driver Platform Construction
- W.006 – Track Work – Peak
- W.008 – Track Tamping
- W.009 – Gantry Removal
- W.011 – Pedestrian Bridge Removal

In accordance with CoA E71, these activities require approval through the OOHW Protocol and/or EPL to occur outside the hours listed above from CoA E70.

Respite offers are also required as part of the additional mitigation measured outlined in **Section 8.3**.

8.3 Additional Mitigation and Management Measures for Out of Hours Work

Where the 'mitigated' construction noise levels remain above the NMLs, the Additional Mitigation Measures Matrix (AMMM) adapted from in the CNVF and CNVMP is to be implemented. The approach, guided by the AMMM, is primarily aimed at pro-active engagement with affected sensitive receptors rather than additional noise reducing mitigation. OOHW has been divided into three periods (Day, Evening and Night) as adapted from the CNVF around the approved project hours (CoA E69).

Additional mitigation measures described in the CNVMP are listed in **Table 21**. The additional mitigation measures to be adopted for airborne noise are identified in **Table 22**. The additional mitigation measures for construction vibration are identified in **Table 23**.

Table 21 Additional Mitigation Measures

Mitigation/Management Measure	Abbreviation
Communication (Category 1)[1]	CO1
Communication (Category 2)[2]	CO2
Respite Offer[3]	RO
Alternative Accommodation	AltA
Agreement with Owners	AO

Note 1: As outlined in the CNVF, Communication to provide information on the OOHW via methods such as letter box drop, email, newsletter, media advertisements and/ or website prior to the works commencing.

Note 2: As outlined in the CNVF, Communication should be personalised (e.g. door knock, meeting, telephone call). Contact with these residents should commence early to enable feedback to be considered by the proposal.

Note 3: As outlined in the CNVF, RO are not applicable to non-residential receivers. RO may comprise of pre-purchased movie tickets, dinner vouchers or similar. RO can also be provided by limiting high noise generating works and allowing at least a one-hour respite period between blocks of work. Where possible, the timing of this respite should be discussed with the impacted community.

Table 22 Airborne Noise – Additional Mitigation Measures Matrix

Time Period		Exceedance of NML	Perception	Duration	Communication Category/ Management Measure
OOHW Daytime Period	Sunday 8am – 6pm (including public holidays)	<5	Noticeable	Any	CO1
		5-15	Clearly audible	Any	CO1
		16-25	Moderately intrusive	Any	CO1, CO2
		>25	Highly intrusive	Any	CO1, CO2
OOHW Evening Period	Monday – Sunday 6pm – 10pm (including public holidays)	<5	Noticeable	Any	CO1
		5-15	Clearly audible	Any	CO1
		16-25	Moderately intrusive	Any	CO1, CO2
		>25	Highly intrusive	Any	CO1, CO2
				>2 consecutive rest periods[1]	CO1, CO2, RO
OOHW Night Period	Monday – Saturday 10pm – 7am Sunday 10pm – 8am (including public holidays)	<5	Noticeable	Any	CO1
		5-15	Clearly audible	Any	CO1
		16-25	Moderately intrusive	Any	CO1, CO2
				>2 consecutive sleep periods[1]	CO1, CO2, RO,AO
		>25	Highly intrusive	Any	CO1, CO2, RO
				>2 consecutive sleep periods[1]	CO1, CO2, RO, AO, AltA

Note 1: Where the duration exceeds 2 consecutive rest/sleep periods, the corresponding additional mitigation measures will be provided for all periods where construction exceedances are expected to occur.

Table 23 Vibration – Additional Mitigation Measures Matrix

Time Period		Duration	Exceedance of 'preferred' value	Exceedance of 'maximum' value
OOHW Daytime Period	Sunday 8am – 6pm (including public holidays)	Any	CO1, CO2	CO1, CO2, RO
OOHW Evening Period	Monday – Sunday 6pm – 10pm (including public holidays)	Any	CO1, CO2	CO1, CO2, RO
OOHW Night Period	Monday – Saturday 10pm – 7am Sunday 10pm – 8am (including public holidays)	Any	CO1, CO2, RO	CO1, CO2, RO, AltA

8.3.1 Receivers Eligible for Additional Mitigation Measures - Noise

The receivers eligible for additional mitigation and management measures due to construction noise from the project work are presented in **Appendix C** and **Appendix D**. Where work occurs for greater than two consecutive evening or nights, receivers may be eligible for respite offers (RO), agreements with owners (AO) or alternative accommodation (AltA) depending on the exceedance level and works period as detailed in **Table 22**.

As outlined in **Section 5.2**, 'highly intrusive' impacts at nearest residential receivers and some other sensitive receivers are predicted for most work scenarios due to the proximity to the work. The addresses of the 'highly intrusive' impacted receivers are provided in **Appendix D**.

All scenarios that are scheduled for OOHW are predicted to create highly intrusive noise levels at residential receivers for the night-time period. Should these works occur for more than two consecutive sleep or rest periods in a row, additional mitigation measures must be offered as outlined in **Table 22**.

Where possible, work would be scheduled to avoid impacting the same receivers for more than two consecutive sleep periods. Receivers that would be impacted for more than two consecutive sleep periods must be identified in the OOHW permit.

8.3.2 Receivers Eligible for Additional Mitigation Measures - Vibration

As defined in **Section 2.2.1** and **Section 8.2** activities involving high noise generating equipment, such as rock hammering or vibratory rolling, are limited to specific daytime construction hours only. Respite periods of 1 hour after every 3 hours of high noise/vibration generating work are also required.

Construction vibration mitigation and management measures are discussed in **Section 8.0**. Any proposed works outside of the approved daytime hours will need to be assessed as part of the OOHW permit preparation discussed in **Section 2.4**. Any additional mitigation (from **Table 23**) for vibration activities must be identified in the OOHW permit.

8.4 Community Notification

As detailed in the standard management measures outlined in the CNVF:

- A telephone, email and web-based community information service will be established to allow the community to obtain additional information on construction activities, provide feedback or make a complaint.
- Regular communications on the activities and progress of the proposal shall be provided to the community (e.g. via newsletter, email and/or website).

8.5 Consultation with Affected Receivers

In accordance with CoA E78, the CNVIS must include specific mitigation measures identified through consultation with affected sensitive land user(s) and the mitigation measures must be implemented for the duration of the Work. Details of this consultation are provided below.

8.5.1 Consultation Approach

This section discusses the consultation approach that has been undertaken for the purposes of the work subject to this CNVIS. It is noted that consultation with affected sensitive land users on what specific mitigation measures they may require is considered to be an ongoing and live process and as such, measures that are personal to individual affected sensitive

land user(s) will not be regularly documented in this CNVIS. Consultation records will be made available to the AA upon request.

The purpose of this consultation is to identify receivers who have specific circumstances that need further consideration during construction – for example, households who have children undertaking exams (HSC or similar), households who have vulnerable persons with disabilities or medical conditions, shift workers, etc.

The consultation approach utilised by Martinus Rail is in accordance with the Community Communications Strategy (CCS). The approach involved directly contacting the affected sensitive land user identified by this CNVIS through one or more of the following methods:

- Surveys distributed by email and paper notifications
- Door-knocks with a 'Sorry we missed you' card for those who were not at home
- Notifications
- Phone calls
- Emails
- Community briefings / group meetings.

Affected sensitive land users contacted by Martinus Rail have been made aware of the anticipated duration and nature of construction works that may affect them, as well as mitigation measures that will be implemented in accordance with the CEMP and CNVMP. Contact information for Martinus Rail's Community Team have been provided to assist with ongoing consultation during construction.

Depending on individual needs and circumstances, specific mitigation measures offered by Martinus Rail could include but are not limited to:

- Offers of individually agreed respite to highly noise affected sensitive land users (standard construction hours)
- Consultation on timetabling of highly noise intensive works to avoid sensitive periods
- Offers of attended noise monitoring at the premises to confirm actual levels of impact
- Offers of temporary alternative accommodation or work space
- Individual briefings.

Specific mitigation measures identified in consultation with individual affected sensitive land users will be implemented during works subject to this CNVIS. Further mitigation measures may be identified by the affected community as construction progresses and these will be assessed where reasonable and feasible and on a case by-case basis.

8.5.2 Consultation for this CNVIS

The project website includes the following key information:

- Latest approvals
- All management plans, including the CNVMP and the Construction Environmental Management Plan (CEMP), which provide information on the relevant environmental management measures
- Notifications, including three-month lookaheads, monthly updates and specific OOHW notifications

- Contact mechanisms, including requests for feedback and/or complaints on individual circumstances.

As part of the project's program of regular notifications, the following notifications have included information on the OOHW requirements subject to this CNVIS:

- Project-wide monthly notifications distributed to over 25,000 properties
- Work specific notifications
- Three-month lookahead notifications distributed to over 25,000 properties
- Regular email with details of upcoming work or changes.

All notifications include the following:

- Link to project website
- 24/7 phone number and email address for enquiries, complaints or comments
- Requests for the community to provide feedback on their individual needs and circumstances.

Prior to commencement of works subject to this CNVIS, targeted consultation occurred with a total of approximately 7,127 residential properties across the entire project alignment, approximately 420 of which were in the Junee precinct. These properties received targeted letterbox drops, emails and newspaper adverts from the Community Team and feedback was sought across (3) three weeks, from 7 August to 28 August 2024.

The team requested feedback from the affected community on their individual needs during this targeted consultation.

8.5.3 Consultation Outcomes

Feedback received during this consultation was primarily related to the existing operational train line and the disturbance the trains cause.

In Junee, no additional management measures relating to construction noise were identified during this consultation; however, the following general sentiments were noted from respondents:

- Limit noise generating work outside of standard construction hours as much as possible
- Limit noise generating work on the weekends as much as possible
- Construction works should be completed as soon as possible.
- Minimise works between the period of 10pm – 7am. Currently, this period is outside of the standard work hours defined in the CoA. Any out of hours work will need to be assessed in accordance with **Section 2.4**.

The CNVIS documents the need to limit noise generating work as much as possible and this will be achieved through the implementation of existing mitigation measures listed in this CNVIS.

Nevertheless, regular consultation with the community will continue throughout construction in accordance with the Community Communications Strategy and the Community Action Plan prepared for the relevant activities. A list of key stakeholders relevant to this CNVIS are included in, **Table 24** below.

Table 24 Key Stakeholders for this CNVIS

Precinct Area	Receiver Type	Level of Engagement	Distance from Work Site (m)
Junee Precinct			
Junee Shire Council	Council	Consult	n/a
Junee District Hospital	Health	Consult	n/a
Junee Station, Junee Yard and Kemp Street Bridge			
Junee Public School	Educational	Consult	130
Good Start Early Learning Junee	Educational	Consult	50
The Crossing Motel, Edgar Street, Lorne Street, Olympic Highway and Anzac Avenue	Residential	Consult	Various
Edgar, George, Ducker, Kemp and Hill Streets	Residential	Consult	Various
Railway Lane, Railway Parade, Thomas, Kemp, Wardle, Hill, Ducker, Signior Streets and Pretoria Avenue	Residential	Consult	Various
Red Cow Hotel, The Junee Hotel	Other (Hotel)	Consult	Various
Chris Blanchard & Mrs Anne Louise	Owner, Locomotive Hotel	Consult	30

8.6 Occupational Noise Exposure

In accordance with CoA E77, worksites will be managed to ensure that noise generated by construction will not exceed the National Standard for exposure to noise in the occupational environment of an eight-hour equivalent continuous A-weighted sound pressure level of $L_{Aeq,8h}$ of 85 dBA for any employee working at a location near the project.

It is not anticipated that an exceedance will occur at any point during the project, however occupational exposure to noise will primarily be managed under the Work Health and Safety Management Plan.

8.7 Monitoring

Noise and vibration monitoring will be undertaken in accordance with the CNVMP (including monitoring program) and the CNVF.

CoA E81 requires that advice from an independent heritage specialist must be sought on methods and locations for installing equipment used for vibration, movement and noise monitoring at heritage-listed structures prior to the installation of the equipment.

Construction Noise Monitoring

Construction noise monitoring will be carried out at the commencement of activities to confirm that actual noise levels are consistent with the predictions presented in this CNVIS, and that the management measures that have been implemented are effective or as per the CNVMP.

Monitoring locations will be focused to the most impacted receivers identified in **Appendix C**. Indicative locations are identified in **Table 25**, however, these will be subject to provision of safe access and the specific location of work being undertaken at the time of monitoring. Noise monitoring will, where practicable, be in a position with unobstructed views of general site activities, whilst shielded as much as possible from non-construction site noise (e.g. road traffic, rail noise and other surrounding noise). The preferred measurement height is 1.2-1.5m above the ground. In accordance with *Australian Standard AS1055:2018*, outdoor noise monitoring is to be undertaken at least 3.5m from any reflecting structure other than the ground.

Noise monitoring will be carried out on or near the property boundary at the locations representative of the nominated receivers in **Table 25** (i.e. in publicly accessible areas near the nominated receivers, if it is safe to do so). Noise monitoring results will be assessed against the noise management levels (NMLs) and predicted exceedance category identified in **Appendix C**.

The results will be documented with discussion about the details of work underway at the time and mitigation in place. Noise monitoring results will be recorded on the MR Noise Monitoring Form in Procore. Noise monitoring data will be made available to the AA and ER for information, upon request.

Construction Vibration Monitoring

Attended or unattended vibration monitoring will be undertaken as required. Monitoring locations may vary as work progresses and will be determined on a case-by-case basis or in response to complaints. The focus of monitoring will be at risk buildings, structures and sensitive receivers as identified in **Section 6.0**. If other vibration intensive activities are required, an assessment of their potential impact is required as per the CNVMP.

Indicative locations are identified in **Table 25**, however, these will be subject to provision of safe access and the specific location of work being undertaken at the time of monitoring. Vibration monitoring data will be made available to the AA and ER for information, upon request.

Table 25 Indicative Monitoring Locations

Location	Type	Monitoring	Timing
Noise Monitoring			
Junee Yard • 2 Crawley St, Junee • 140 Main St, Junee **Junee Station** • 31 Seignior St, Junee • 137 Lorne St, Junee **Kemp Street Bridge** • 5 Hill St, Junee • 1 Seignior St, Junee	Activities based noise monitoring	• Confirming that actual noise levels are consistent with predicted noise impacts and that the effectiveness of actions and mitigation measures implemented are satisfactory, • In response to a noise related complaint(s) (determined on a case-by-case basis) • Following implementation of mitigation measures or noise attenuation because of exceedance of predicted noise levels	At the commencement of the activities being undertaken
	Out of Hours Work	Attended monitoring as required by the Out of Hours Work (OOHW) plan to validate noise levels are consistent with predicted noise impacts and that the effectiveness of actions and mitigation measures implemented are satisfactory	At the commencement of the range of OOHW activities being undertaken.
	Plant / Equipment Checks	Spot checks would be carried out as required on a case-by-case basis, such as • In response to a specific noise related complaint and • During noise verification monitoring when it is possible to isolate the noise from one piece of plant or equipment.	case-by-case basis
Vibration Monitoring			
• Junee Railway Station • 2 Crawley St, Junee	Activities based vibration monitoring	• Confirming that vibration levels are below criteria and that the effectiveness of actions and mitigation measures implemented are satisfactory • In response to a vibration related complaint(s) (determined on a case-by-case basis)	Throughout vibration generating activities being undertaken within minimum working distances to nearby receivers.

9.0 Cumulative Impacts

Cumulative construction noise impacts can occur where multiple work activities are being completed near to a particular receiver at the same time. There is potential for cumulative construction impacts from multiple construction activities being completed in different areas of the project (ie Junee Station, Junee Yard and Kemp Street Bridge enhancement sites).

Since the construction scenarios required for various stages of the project would generally require similar items of equipment, concurrent construction work being completed near to a particular area could theoretically increase the worst-case noise levels in this report by around 3 dB (ie a logarithmic adding of two sources of noise at the same level).

The likelihood of worst-case noise levels being generated by two different work activities at the same time is, however, considered low and rather than increase construction noise levels, the impact of concurrent work would generally be a limited to a potential increase in the duration, and annoyance, of noise impacts on the affected receivers.

In practice, construction noise levels in any one location would vary and would be frequently much lower than the worst-case scenario assessed due to construction staging moving work around within the study area and, in many cases, only a few items of equipment being used at any one time.

Martinus Rail will take feasible and reasonable steps to consult and coordinate with other construction projects when they become aware of them and if they have the potential to impact the same receivers concurrently, to minimise cumulative impacts of noise and vibration and maximise respite for affected sensitive receivers (in accordance with CoA E72 and E83).

Construction Noise and Vibration Impact Statement

Martinus Rail

SLR Project No.: 610.031317.00001

12 August 2025

1. Sound Level or Noise Level

The terms 'sound' and 'noise' are almost interchangeable, except that 'noise' often refers to unwanted sound.

Sound (or noise) consists of minute fluctuations in atmospheric pressure. The human ear responds to changes in sound pressure over a very wide range with the loudest sound pressure to which the human ear can respond being ten million times greater than the softest. The decibel (abbreviated as dB) scale reduces this ratio to a more manageable size by the use of logarithms.

The symbols SPL, L or LP are commonly used to represent Sound Pressure Level. The symbol LA represents A-weighted Sound Pressure Level. The standard reference unit for Sound Pressure Levels expressed in decibels is 2×10^{-5} Pa.

2. 'A' Weighted Sound Pressure Level

The overall level of a sound is usually expressed in terms of dBA, which is measured using a sound level meter with an 'A-weighting' filter. This is an electronic filter having a frequency response corresponding approximately to that of human hearing.

People's hearing is most sensitive to sounds at mid frequencies (500 Hz to 4,000 Hz), and less sensitive at lower and higher frequencies. Different sources having the same dBA level generally sound about equally loud.

A change of 1 dB or 2 dB in the level of a sound is difficult for most people to detect, whilst a 3 dB to 5 dB change corresponds to a small but noticeable change in loudness. A 10 dB change corresponds to an approximate doubling or halving in loudness. The table below lists examples of typical noise levels.

Sound Pressure Level (dBA)	Typical Source	Subjective Evaluation
130	Threshold of pain	Intolerable
120	Heavy rock concert	Extremely noisy
110	Grinding on steel	
100	Loud car horn at 3 m	Very noisy
90	Construction site with pneumatic hammering	
80	Kerbside of busy street	Loud
70	Loud radio or television	
60	Department store	Moderate to quiet
50	General Office	
40	Inside private office	Quiet to very quiet
30	Inside bedroom	
20	Recording studio	Almost silent

Other weightings (eg B, C and D) are less commonly used than A-weighting. Sound Levels measured without any weighting are referred to as 'linear', and the units are expressed as dB(lin) or dB.

3. Sound Power Level

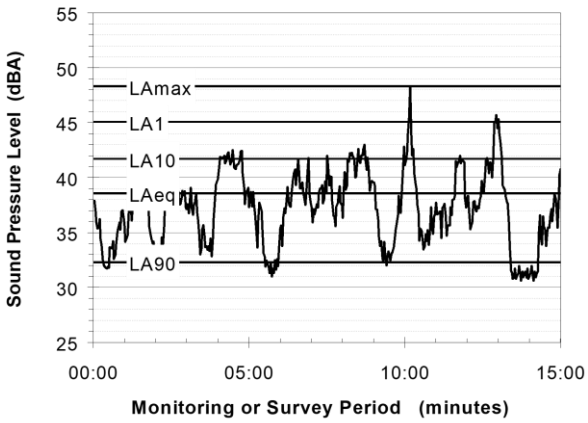

The Sound Power of a source is the rate at which it emits acoustic energy. As with Sound Pressure Levels, Sound Power Levels are expressed in decibel units (dB or dBA), but may be identified by the symbols SWL or LW, or by the reference unit 10^{-12} W.

The relationship between Sound Power and Sound Pressure is similar to the effect of an electric radiator, which is characterised by a power rating but has an effect on the surrounding environment that can be measured in terms of a different parameter, temperature.

4. Statistical Noise Levels

Sounds that vary in level over time, such as road traffic noise and most community noise, are commonly described in terms of the statistical exceedance levels LAN, where LAN is the A-weighted sound pressure level exceeded for N% of a given measurement period. For example, the LA1 is the noise level exceeded for 1% of the time, LA10 the noise exceeded for 10% of the time, and so on.

The following figure presents a hypothetical 15 minute noise survey, illustrating various common statistical indices of interest.

Of particular relevance, are:

LA1 The noise level exceeded for 1% of the 15 minute interval.

LA10 The noise level exceeded for 10% of the 15 minute interval. This is commonly referred to as the average maximum noise level.

LA90 The noise level exceeded for 90% of the sample period. This noise level is described as the average minimum background sound level (in the absence of the source under consideration), or simply the background level.

LAeq The A-weighted equivalent noise level (basically, the average noise level). It is defined as the steady sound level that contains the same amount of acoustical energy as the corresponding time-varying sound.

LAmax The A-weighted maximum sound pressure level of an event measured with a sound level meter.

5. Frequency Analysis

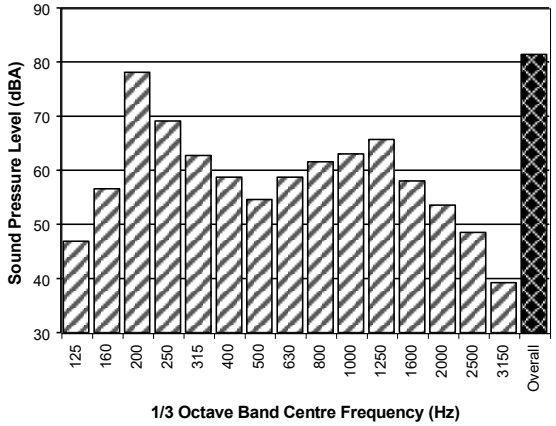

Frequency analysis is the process used to examine the tones (or frequency components) which make up the overall noise or vibration signal.

The units for frequency are Hertz (Hz), which represent the number of cycles per second.

Frequency analysis can be in:

- Octave bands (where the centre frequency and width of each band is double the previous band)
- 1/3 octave bands (three bands in each octave band)
- Narrow band (where the spectrum is divided into 400 or more bands of equal width)

The following figure shows a 1/3 octave band frequency analysis where the noise is dominated by the 200 Hz band. Note that the indicated level of each individual band is less than the overall level, which is the logarithmic sum of the bands.

6. Annoying Noise (Special Audible Characteristics)

A louder noise will generally be more annoying to nearby receivers than a quieter one. However, noise is often also found to be more annoying and result in larger impacts where the following characteristics are apparent:

- **Tonality** - tonal noise contains one or more prominent tones (ie differences in distinct frequency components between adjoining octave or 1/3 octave bands), and is normally regarded as more annoying than 'broad band' noise.
- **Impulsiveness** - an impulsive noise is characterised by one or more short sharp peaks in the time domain, such as occurs during hammering.
- **Intermittency** - intermittent noise varies in level with the change in level being clearly audible. An example would include mechanical plant cycling on and off.
- **Low Frequency Noise** - low frequency noise contains significant energy in the lower frequency bands, which are typically taken to be in the 10 to 160 Hz region.

7. Vibration

Vibration may be defined as cyclic or transient motion. This motion can be measured in terms of its displacement, velocity or acceleration. Most assessments of human response to vibration or the risk of damage to buildings use measurements of vibration velocity. These may be expressed in terms of 'peak' velocity or 'rms' velocity.

The former is the maximum instantaneous velocity, without any averaging, and is sometimes referred to as 'peak particle velocity', or PPV. The latter incorporates 'root mean squared' averaging over some defined time period.

Vibration measurements may be carried out in a single axis or alternatively as triaxial measurements (ie vertical, longitudinal and transverse).

The common units for velocity are millimetres per second (mm/s). As with noise, decibel units can also be used, in which case the reference level should always be stated. A vibration level V, expressed in mm/s can be converted to decibels by the formula 20 log (V/Vo), where Vo is the reference level (10^{-9} m/s). Care is required in this regard, as other reference levels may be used.

8. Human Perception of Vibration

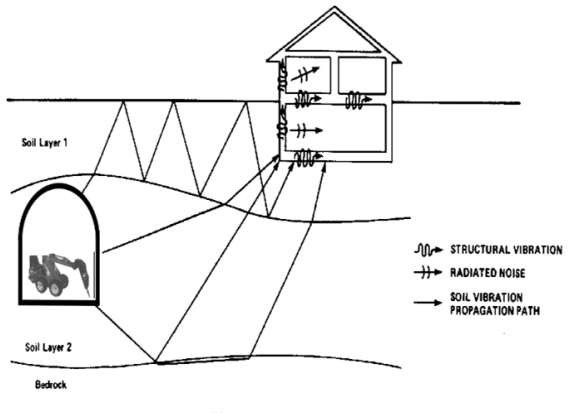

People are able to 'feel' vibration at levels lower than those required to cause even superficial damage to the most susceptible classes of building (even though they may not be disturbed by the motion). An individual's perception of motion or response to vibration depends very strongly on previous experience and expectations, and on other connotations associated with the perceived source of the vibration. For example, the vibration that a person responds to as 'normal' in a car, bus or train is considerably higher than what is perceived as 'normal' in a shop, office or dwelling.

9. Ground-borne Noise, Structure-borne Noise and Regenerated Noise

Noise that propagates through a structure as vibration and is radiated by vibrating wall and floor surfaces is termed 'structure-borne noise', 'ground-borne noise' or 'regenerated noise'. This noise originates as vibration and propagates between the source and receiver through the ground and/or building structural elements, rather than through the air.

Typical sources of ground-borne or structure-borne noise include tunnelling works, underground railways, excavation plant (eg rockbreakers), and building services plant (eg fans, compressors and generators).

The following figure presents an example of the various paths by which vibration and ground-borne noise may be transmitted between a source and receiver for construction activities occurring within a tunnel.

The term 'regenerated noise' is also used in other instances where energy is converted to noise away from the primary source. One example would be a fan blowing air through a discharge grill. The fan is the energy source and primary noise source. Additional noise may be created by the aerodynamic effect of the discharge grill in the airstream. This secondary noise is referred to as regenerated noise.

Basis of Report

This report has been prepared by SLR Consulting Australia (SLR) with all reasonable skill, care and diligence, and taking account of the timescale and resources allocated to it by agreement with Martinus Rail (the Client). Information reported herein is based on the interpretation of data collected, which has been accepted in good faith as being accurate and valid.

This report is for the exclusive use of the Client. No warranties or guarantees are expressed or should be inferred by any third parties. This report may not be relied upon by other parties without written consent from SLR.

SLR disclaims any responsibility to the Client and others in respect of any matters outside the agreed scope of the work.

Table of Contents

Basis of Report ..... **i**
Acronyms and Abbreviations ..... **v**
Compliance Table **1**
1.0 Introduction **6**
2.0 Project Description **6**
2.1 Scope of this CNVIS 6
2.2 Hours of work 7
2.2.1 Highly Noise Intensive Work 7
2.3 Variation to hours of work 7
2.4 Justification of Out of Hours Work (OOHW) 8
3.0 Existing Environment **8**
3.1 Background Noise Levels 8
4.0 Assessment Criteria **10**
4.1 Construction Noise and Vibration Guidelines 10
4.2 Noise Management Levels 10
4.2.1 Residential Receivers 10
4.2.2 Other Sensitive Land Uses and Commercial Receivers 11
4.2.3 Ground-borne Noise 12
4.3 Vibration Criteria 13
4.3.1 Heritage Buildings or Structures 15
4.3.2 Buried Pipework and Utilities 16
4.3.3 Minimum Working Distances for Vibration Intensive Work 17
4.4 Traffic on Surrounding Roads 18
5.0 Noise Assessment **19**
5.1 Work Scenarios 19
5.1.1 Modelling Scenarios and Equipment 22
5.2 Predicted Noise Levels 22
5.3 Ground-borne Noise 25
6.0 Vibration Assessment **26**
6.1 Cosmetic Damage Assessment 30
6.2 Human Comfort Assessment 30
7.0 Construction Traffic Assessment **31**
7.1 Traffic Diversions 31
8.0 Mitigation and Management Measures **34**
8.1 Site Specific Mitigation Measures 34

8.2 Respite 37
8.3 Additional Mitigation and Management Measures for Out of Hours Work 39
8.3.1 Receivers Eligible for Additional Mitigation Measures - Noise 41
8.3.2 Receivers Eligible for Additional Mitigation Measures - Vibration 41
8.4 Community Notification 41
8.5 Consultation with Affected Receivers 41
8.5.1 Consultation approach 41
8.5.2 Consultation for this CNVIS 42
8.5.3 Consultation outcomes 43
8.6 Occupational Noise Exposure 44
8.7 Monitoring 45
9.0 Cumulative Impacts 47

Appendix C Noise Impact Maps
Appendix D Receivers Triggering Additional Mitigation

Acronyms and Abbreviations

AA	The Acoustics Advisor for the CSSI approved by the Planning Secretary
A2I	Albury to Illabo section of the Inland Rail project
ARTC	Australian Rail Track Corporation
AS	Australian Standard
AV:ATG	Assessing Vibration: a technical guideline (DEC, 2006)
BS	British Standard
dBA	A-weighted decibel (referenced 20 µPa)
DPHI	Department of Planning, Housing and Infrastructure
CCHMP	Construction Cultural Heritage Management Plan
CEMP	Construction Environmental Management Plan
CH	Chainage
CNVF	Inland Rail NSW Construction Noise and Vibration Framework
CNVIS	Construction Noise and Vibration Impact Statement
CNVMP	Construction Noise and Vibration Management Plan
CSSI	Critical Stage Significant Infrastructure
DEC	Department of Environment and Conservation
DECC	Department of Environment and Climate Change (now NSW EPA)
DIN	Deutches Institut für Normung (German Institute for Standardisation)
EIS	Environmental Impact Statement
EP&A Act	Environmental Planning and Assessment Act 1979
EPA	Environment Protection Authority
EPL	Environmental Protection Licence
ER	The Environmental Representative(s) for CSSI approved by the Planning Secretary.
HNA	Highly Noise Affected
Hz	Hertz
ICNG	Interim Construction Noise Guideline (DECC, 2009
IR	Inland Rail
ISO	International Standards Organisation
km	Kilometres
km/h	Kilometres per hour
L_{Aeq}	Equivalent continuous noise level, providing a representation of the cumulative level of noise exposure over a defined period.
$L_{Aeq(15hour)}$	The equivalent continuous noise level for the 15-hour daytime period of 7.00 am to 10.00 pm
$L_{Aeq(9hour)}$	The equivalent continuous noise for the 9-hour night-time period of 10.00 pm to 7.00 am

$L_{Aeq(1hour)}$	The equivalent continuous noise for the 1-hour daytime or night-time period that has the potential to result in the greatest noise impact to sensitive receivers.
L_{Amax}	The maximum noise level during the measurement or assessment period. The L_{AFmax} or Fast is averaged over 0.125 of a second and the L_{ASmax} or Slow is averaged over 1-second.
m	Metres
mm	Millimetres
mm/s	Millimetres per second
m/s	Metres per second
MR	Martinus Rail
NCA	Noise Catchment Area
NML	Noise Management Level
NSW	New South Wales
NPfI	Noise Policy for Industry
OOHW	Out of hours work
PPV	Peak Particle Velocity
RBL	Rating background Level
TfNSW	Transport for New South Wales
VDV	Vibration Dose Value

Compliance Table

CoA	Requirement	Reference
A1	The Proponent must carry out the CSSI in accordance with the terms of this approval and generally in accordance with the: a) Inland Rail – Albury to Illabo Environmental Impact Statement (ARTC, August 2022) b) Albury to Illabo Response to Submissions (ARTC, November 2023) c) Albury to Illabo Preferred Infrastructure Report (ARTC, November 2023) d) Albury to Illabo Preferred Infrastructure Report Response to Submissions (ARTC, February 2024) e) Inland Rail – Albury to Illabo (SSI-10055) Response to request for additional information – Air Quality Assessment (letter dated 1 May 2024) f) Part 1 - Revised Technical Paper 8: Biodiversity Development Assessment Report (WSP, February 2024) g) Part 2 - Revised Technical Paper 8: Biodiversity Development Assessment Report (WSP, February 2024)	**The CNVMP**
A2	The CSSI must only be carried out in accordance with all procedures, commitments, preventative actions, performance criteria and mitigation measures set out in the documents listed in Condition A1 unless otherwise specified in, or required under, this approval.	**The CNVMP**
C9	The Construction Noise and Vibration Sub-plan must include, but not limited to: a) measures to reduce construction to standard ICNG hours where sensitive land uses are likely to be noise affected for more than 3 months; b) an approach to assess and manage construction fatigue from noise impacts on sensitive receivers on an ongoing basis; c) noise sensitive periods identified by the community, religious, educational institutions, noise and vibration-sensitive businesses and critical working areas and measures to ensure noise levels above the NMLs do not occur during sensitive periods in accordance with Condition E76; d) mitigation for construction traffic noise impacts from additional construction traffic and road diversions; e) the location of all heritage items, non-heritage structures and infrastructure likely to be impacted by vibration and measures to manage vibration impacts at those items and structures; and f) vibration levels at a range of distances from vibration intensive equipment such as excavators and vibratory rollers before undertaking works with the specific type and size of equipment.	**The CNVMP**
E68	A detailed land use survey must be undertaken to confirm sensitive land use(s) (including critical working areas such as operating theatres and precision laboratories) potentially exposed to construction noise and vibration, construction ground-borne noise and operational noise. The survey may be undertaken on a progressive basis but must be undertaken in any one area before the commencement of work which generates construction or operational noise, vibration or ground-borne noise in that area. The results of the survey must be included in the Noise and Vibration CEMP sub-plan required by Condition C8.	**The CNVMP, Section 3.0, Figure 1**
E69	Work must be undertaken during the following hours: a) 7:00am to 6:00pm Mondays to Fridays, inclusive; b) 7:00am to 6:00pm Saturdays; and c) at no time on Sundays or public holidays.	**Section 2.2**

CoA	Requirement	Reference
E70	Except as permitted by an EPL, highly noise intensive works that result in an exceedance of the applicable NML at the same receiver must only be undertaken: a) between the hours of 8:00 am to 6:00 pm Monday to Friday; b) between the hours of 8:00 am to 1:00 pm Saturday; and c) if continuously, then not exceeding three (3) hours, with a minimum cessation of work of not less than one hour. For the purposes of this condition, 'continuously' includes any period during which there is less than one hour between ceasing and recommencing any of the work.	**Section 2.2.1**, **Section 8.2**
E71	Notwithstanding Conditions E69 and E70, work may be undertaken outside the hours specified in the following circumstances (a, b, or c): a) Safety and Emergencies, including: i. for the delivery of materials required by the NSW Police Force or other authority for safety reasons; or ii. where it is required in an emergency to avoid injury or the loss of life, to avoid damage or loss of property or to prevent environmental harm. On becoming aware of the need for emergency work in accordance with Condition E71(a), the AA, the ER, the Planning Secretary and the EPA must be notified of the reasons for such work. Best endeavours must be used to notify all noise and/or vibration affected residents and owners/occupiers of properties identified sensitive land use(s) of the likely impact and duration of those work. b) Work, that meets the following criteria;: i. construction that causes $L_{Aeq(15\ minute)}$ noise levels: • no more than 5 dB(A) above the rating background level at any residence in accordance with the ICNG, and • no more than the 'Noise affected' NMLs specified in Table 3 of the ICNG at other sensitive land use(s); and ii. construction that causes L_{AFmax} noise levels no more than 15 dB above the rating background level at any residence during the night period as defined in the ICNG. and iii. construction that causes: • continuous or impulsive vibration values, measured at the most affected residence no more than the preferred values for human exposure to vibration, specified in Table 2.2 of *Assessing Vibration: a technical guideline* (DEC, 2006), or • intermittent vibration values measured at the most affected residence no more than the preferred values for human exposure to vibration, specified in Table 2.4 *of Assessing Vibration: a technical guideline* (DEC, 2006). c) By Approval, including: i. where different construction hours, such as those for a rail possession, are permitted under an EPL in force in respect of the CSSI; or ii. works which are not subject to an EPL that are approved under an Out-of-Hours Work Protocol as required by Condition E72; or iii. negotiated agreements with directly affected residents and sensitive land use(s).	**Section 2.3**
E72	An Out-of-Hours Work Protocol must be prepared to identify a process for the consideration, management and approval of work which is outside the hours defined in Conditions E69, and that are not subject to an EPL. The Protocol must be approved by the Planning Secretary before commencement of the Out-of-Hours Work. The Protocol must be prepared in consultation with the ER, AA and EPA.	**The CNVMP, Section 2.4**

CoA	Requirement	Reference
	The Protocol must include: a) identification of low and high-risk activities and an approval process that considers the risk of activities, proposed mitigation, management, and coordination, including where: i. the ER and AA review all proposed out-of-hours activities and confirm their risk levels, ii. low risk activities can be approved by the ER in consultation with the AA, and iii. high risk activities that are approved by the Planning Secretary; b) a process for the consideration of out-of-hours work against the relevant NML and vibration criteria; c) a process for selecting and implementing mitigation measures for residual impacts in consultation with the community at each affected location, including respite periods. The measures must take into account the predicted noise levels and the likely frequency and duration of the out-of-hours works that sensitive land use(s) would be exposed to, including the number of noise awakening events; d) procedures to facilitate the coordination of out-of-hours work including those approved by an EPL or undertaken by a third party, to ensure appropriate respite is provided; and e) notification arrangements for affected receivers for approved out-of-hours work and notification to the Planning Secretary of approved low risk out-of-hours works. This condition does not apply if the requirements of Condition E71 are met.	
E73	Except as permitted by an EPL, out-of-hours work that may be regulated through the Out-of-Hours Work Protocol as per Condition E72, but is not limited to: a) Carrying out work that if carried out during standard hours would result in a high risk to construction personnel or public safety based on a risk assessment carried out in accordance with AS/NZS ISO 31000:2009: "Risk management; or b) where the relevant roads authority has advised the Proponent in writing that carrying out the work during standard hours would result in a high risk to road network performance and a road occupancy licence will not be issued; or c) where the relevant utility service operator has advised the Proponent in writing that carrying out the work during standard hours would result in a high risk to the operation and integrity of the utility network; or d) work undertaken in a rail possession for operational or safety reasons. *Note: Other out-of-hours works can be undertaken with the approval of an EPL, or through the project's Out-of-Hours Work Protocol for works not subject to an EPL.*	**Section 2.3**
E74	Mitigation measures must be implemented with the aim of achieving the following construction noise management levels and vibration objectives: a) construction 'Noise affected' NMLs established using the Interim Construction Noise Guideline (DECC, 2009); b) vibration criteria established using *the Assessing vibration: a technical guideline* (DEC, 2006) (for human exposure); c) Australian Standard AS 2187.2 - 2006 "*Explosives - Storage and Use - Use of Explosives*"; d) BS 7385 Part 2-1993 "*Evaluation and measurement for vibration in buildings Part 2*" as they are "applicable to Australian conditions"; and e) the vibration limits set out in the *German Standard DIN 4150-3: Structural Vibration- effects of vibration on structures* (for structural damage).	**The CNVMP, Section 4.0, Section 8.0**

CoA	Requirement	Reference
	Work that exceeds the noise management levels and/or vibration criteria must be managed in accordance with the Noise and Vibration CEMP sub-plan. *Note: The ICNG identifies 'particularly annoying' activities that require the addition of 5 dB(A) to the predicted level before comparing to the construction NML.*	
E75	Mitigation measures must be applied when the following residential ground-borne noise levels are exceeded: a) evening (6:00 pm to 10:00 pm) — internal $L_{Aeq(15\ minute)}$: 40 dB(A); and b) night (10:00 pm to 7:00 am) — internal $L_{Aeq(15\ minute)}$: 35 dB(A). The mitigation measures must be outlined in the Noise and Vibration CEMP sub-plan, including in any Out-of-Hours Work Protocol, required by Condition E72.	**Section 4.2.3**
E76	Noise generating work in the vicinity of community, religious, educational institutions, noise and vibration-sensitive businesses and critical working areas (such as exam halls, theatres, laboratories and operating theatres) resulting in noise levels above the NMLs must not be timetabled during sensitive periods, unless other reasonable arrangements with the affected institutions are made at no cost to the affected institution.	**Section 8.0**
E77	At no time can noise generated by construction exceed the National Standard for exposure to noise in the occupational environment of an eight-hour (8hr) equivalent continuous A-weighted sound pressure level of $L_{Aeq,8h}$ of 85 dB(A) for any employee working at a location near the CSSI.	**Section 8.6**
E78	Construction Noise and Vibration Impact Statements (CNVIS) must be prepared for work that may exceed the noise management levels, vibration criteria and/or ground-borne noise levels specified in Condition E74 and Condition E75 at any residence outside construction hours identified in Condition E69, or where receivers will be highly noise affected. The CNVIS must include specific mitigation measures identified through consultation with affected sensitive land use(s) and the mitigation measures must be implemented for the duration of the works. A copy of the CNVIS must be provided to the AA and ER prior to the commencement of the associated works. The Planning Secretary may request a copy/ies of CNVIS.	**This report** **Section 8.5**
E79	Owners and occupiers of properties at risk of exceeding the screening criteria for cosmetic damage must be notified before work that generates vibration commences in the vicinity of those properties. If the potential exceedance is to occur more than once or extend over a period of 24 hours, owners and occupiers are to be provided a schedule of potential exceedances on a monthly basis for the duration of the potential exceedances, unless otherwise agreed by the owner and occupier. These properties must be identified and considered in the Noise and Vibration CEMP Sub-plan required by Condition C8 and the Community Communication Strategy required by Condition B1.	**Section 8.0**
E80	Vibration testing must be undertaken before and during vibration generating activities that have the potential to impact on heritage items to identify minimum working distances to prevent cosmetic damage. In the event that the vibration testing and attended monitoring shows that the preferred values for vibration are likely to be exceeded, the construction methodology must be reviewed and, if necessary, additional mitigation measures implemented.	**Section 6.1,** **Section 8.0**
E81	Advice from an independent heritage specialist must be sought on methods and locations for installing equipment used for vibration, movement and noise monitoring at heritage-listed structures. *Note: The heritage specialist is to provide advice prior to installing equipment that may impact the heritage significance or structural integrity of the heritage listed structures.*	**Section 8.0**
E83	All work undertaken for the delivery of the CSSI, including those undertaken by third parties (such as utility relocations), must be coordinated to ensure respite periods are provided. This must include:	**Section 8.0,** **Section 8.2**

CoA	Requirement	Reference
	a) rescheduling work to provide respite to impacted noise sensitive land use(s) so that the respite is achieved; or b) the provision of alternative respite or mitigation to impacted noise sensitive land use(s); and c) the provision of documentary evidence to the AA in support of any decision made in relation to respite or mitigation. The consideration of respite must also include all other CSSI, SSI and SSD projects which may cause cumulative and/or consecutive impacts at receivers affected by the delivery of the CSSI.	
E119	The Proponent must coordinate Work with adjoining Inland Rail Projects, including any work to relocate or connect utilities, to minimise cumulative and consecutive noise and vibration impacts and maximise respite for affected sensitive land uses. Coordination and mitigation measures must be detailed in the Construction Noise and Vibration management Sub-plan required by Condition C9.	**Section 8.0, Section 8.2, Section 9.0**
E122	Property damage caused directly or indirectly (for example from vibration or from groundwater change) by the construction or operation must be rectified at no cost to the owner. Alternatively, compensation may be provided for the property damage as agreed with the property owner.	**Section 6.1**

1.0 Introduction

SLR Consulting Australia Pty Ltd (SLR) has been engaged by Martinus Rail (MR) to prepare a construction noise and vibration impact statement (CNVIS) for work at the Olympic Highway Underbridge site in Junee, NSW. These sites form part of the Albury to Illabo (A2I) section of Inland Rail (the Project).

This assessment has been prepared in accordance with the Construction Noise and Vibration Management Plan (CNVMP) for the A2I section of the Project.

This report assesses the potential construction noise and vibration impacts for the Olympic Highway Underbridge site. An explanation of the specialist acoustic terminology used in this report is provided in **Appendix A**.

2.0 Project Description

Inland Rail is an approximate 1,600 kilometres (km) freight rail network that will connect Beveridge and Kagaru via regional Victoria, New South Wales and Queensland. The Inland Rail route would involve using approximately 1,000 km of existing track (with enhancements and upgrades where necessary) and 600 km of new track, passing through 30 local government areas. Inland Rail will accommodate double-stacked freight trains up to 1,800 metres (m) long and 6.5 m high.

The Albury to Illabo (A2I) section (the Project) forms a key component of the Inland Rail program. It is a 185 km section of existing rail corridor located in regional NSW between the towns of Albury and Illabo. Works would include track realignment, lowering and/or modification within the existing rail corridor, modification, removal or replacement of bridge structures (rail, road and/or pedestrian bridges), raising or replacing signal gantries, level-crossing modifications and other associated works. This CNVIS is associated with Olympic Highway Underbridge site in Junee, NSW.

Relevant noise and vibration conditions from the Conditions of Approval (CoA) are detailed within the compliance table at the beginning of this document and will be complied with during the work.

2.1 Scope of this CNVIS

The focus of this CNVIS is the work associated with the Olympic Highway Underbridge site. Work at this site includes:

- Establishment of temporary site facilities, including site office/shed and materials laydown areas
- Site Compound Operation
- Geotechnical Investigations
- Driver platform work
- Track Work including highly noise intensive work
- Track Work excluding highly noise intensive work
- Tamping following track work

Further details of work activities are outlined in **Section 5.1**. The work area is surrounded by a combination of residential, commercial, industrial, educational and medical receivers. Additionally, there are several childcare centres, places of worship, hotels, libraries and public buildings at various setbacks from the main areas of work. The Project location, work areas and surrounding receivers are shown in **Figure 1**.

2.2 Hours of work

In accordance with the Construction Noise and Vibration Management Plan (CNVMP) and CoA E69 construction work must be undertaken within the approved standard construction hours:

a) 7:00am to 6:00pm Monday to Friday, inclusive;

b) 7:00am to 6:00pm Saturday and

c) At no time on Sundays or public holidays.

2.2.1 Highly Noise Intensive Work

As outlined in the CoA E70, any highly noise intensive works that result in an exceedance of the applicable NML at the same receiver must only be undertaken:

a) Between 08:00am – 06:00pm Monday to Friday;

b) Between 08:00am – 01:00pm Saturday; and

c) If continuously, then not exceeding (3) hours, with a maximum cessation of work of not less than one hour.

The CoA defines ‘highly noise intensive works’ as those identified as annoying under the ICNG and include:

- Use of ‘beeper’ style reversing or movement alarms, particularly as night-time;
- Use of power saws, such as used for cutting timber, rail lines, masonry, road pavement or steel work;
- Grinding metal, concrete or masonry;
- Rock drilling;
- Line drilling;
- Vibratory rolling;
- Rail tamping and regulating;
- Bitumen milling or profiling;
- Jackhammering, rock hammering or rock breaking;
- Impact piling.

2.3 Variation to hours of work

Notwithstanding CoA E69 and E70, work may be undertaken outside the hours specified in the following CoA E71 circumstances (a, b, or c):

a) Safety and Emergencies

b) Work, that meets specific criteria

c) By Approval

Note: refer to **Compliance Table** for further detail.

2.4 Justification of Out of Hours Work (OOHW)

Work activities that may be required or proposed to be undertaken outside of standard working hours will be managed in accordance with the OOHW Protocol as defined in CoA E72 and E73, unless the work is regulated by an EPL.

All work on or adjacent to roads would be carried out in accordance with a relevant Traffic Control Plan (TCP), Road Occupancy Licence (ROL) and/or rail possession to facilitate safe work near live road/rail traffic. Where an ROL/rail possession cannot be obtained for the approved project hours and/or proposed works cannot be undertaken safely during these hours, some works will be required to be undertaken outside of standard hours (ie Out of Hours Work, OOHW).

As outlined in the ICNG, work undertaken on public infrastructure may need to be undertaken outside the recommended standard hours. For this project the need is based on a requirement to sustain the operational integrity of public infrastructure, as works to restore operation of the infrastructure provide benefit to the greater community (ie more than just local residents).

Further detail around the specific work tasks, duration and justification of OOHW must be identified in the OOHW permit, required by the OOHW Protocol or EPL.

3.0 Existing Environment

The existing ambient noise environment was described in Environmental Impact Statement (EIS), Technical Paper 6 – Noise and Vibration (Non-Rail) for the Albury to Illabo project. This section provides details of the existing ambient noise environment relevant to the Olympic Highway Underbridge work.

The noise catchment area (NCA) used is consistent with the NCA described in the EIS and is shown in **Figure 1** with the receiver classifications and approximate noise monitoring location.

A detailed land use survey was undertaken in August 2024 to confirm sensitive land uses within the project area, results of the land use survey have been incorporated into the receiver classifications shown in **Figure 1.**

3.1 Background Noise Levels

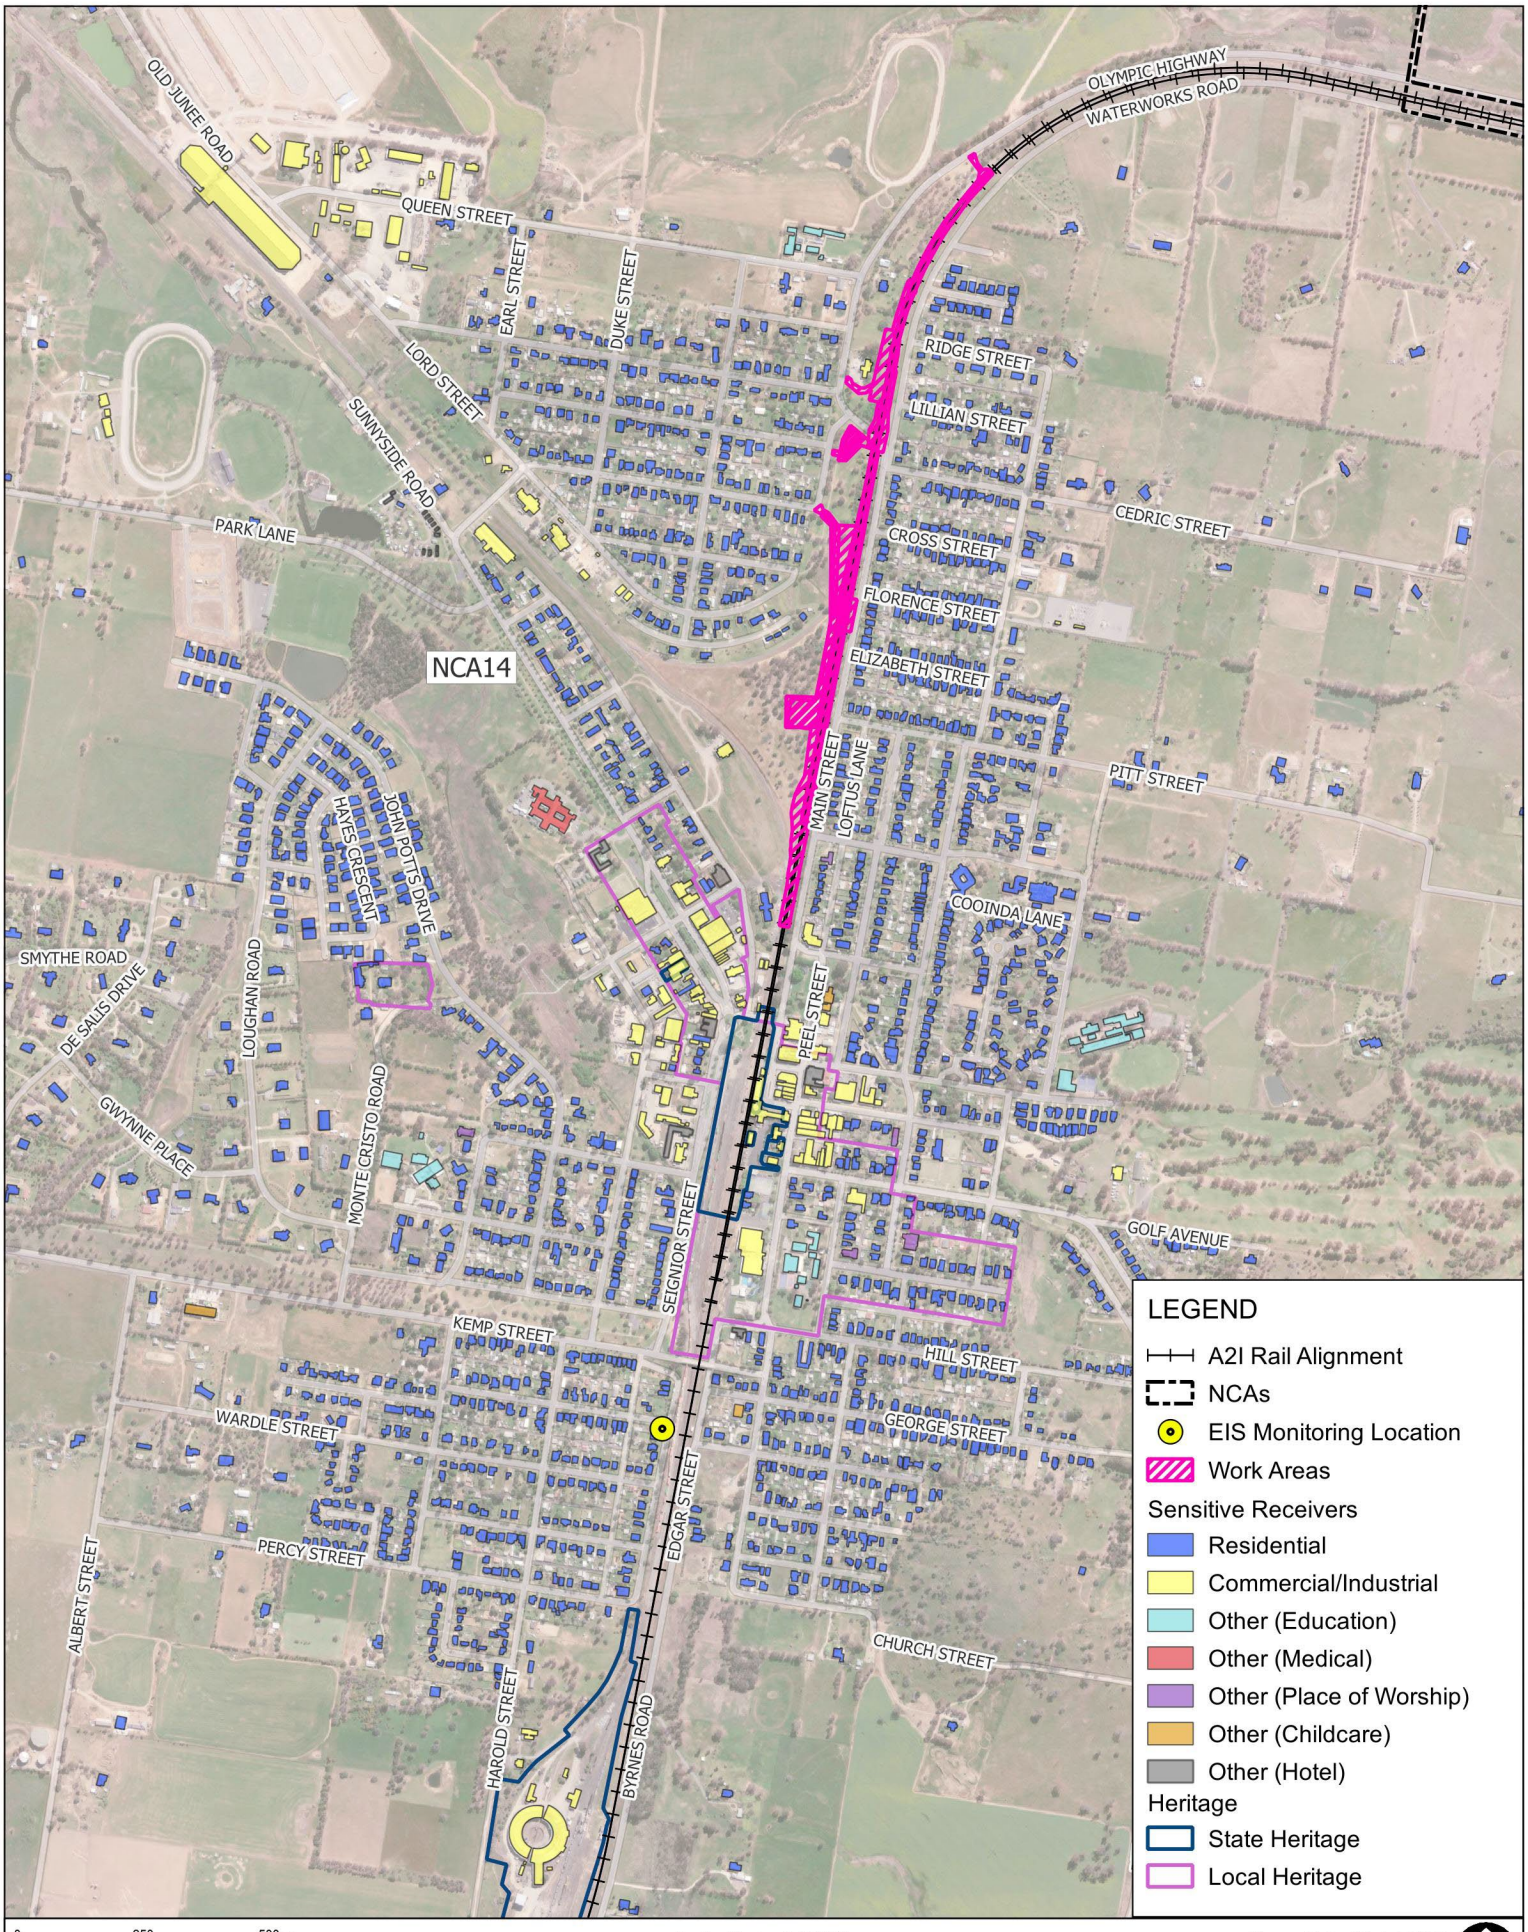

Background noise levels have been referenced from the baseline noise survey undertaken as part of the EIS and reproduced in the CNVMP. The background noise levels relevant to the Olympic Highway Underbridge work are summarised in **Table 1**.

Table 1 Background Noise Levels

Noise Monitoring Location	NCA	Rating background Level (RBL) dBA NPfI defined time periods[1]		
		Daytime	Evening	Night-time
14	14	42	42[2] (45)	35

Note 1: The assessment periods are the daytime which is 7 am to 6 pm Monday to Saturday and 8 am to 6 pm on Sundays and public holidays, the evening which is 6 pm to 10 pm, and the night-time which is 10 pm to 7 am on Monday to Saturday and 10 pm to 8 am on Sunday and public holidays. See the NSW EPA Noise Policy for Industry (NPfI).

Note 2: The evening RBL data has been reduced to the daytime period RBL in this case (bracketed figures indicates the measured value).

4.0 Assessment Criteria

4.1 Construction Noise and Vibration Guidelines

The standards and guidelines relevant to the Project are listed in **Table 2**. These guidelines aim to protect the community and environment from excessive noise and vibration impacts during construction of projects.

Table 2 Construction Noise and Vibration Standards and Guidelines

Guideline/Policy Name	Where Guideline Used
Inland Rail NSW Construction Noise and Vibration Framework (CNVF)	Assessment and management protocols for airborne noise, ground-borne noise and vibration impacts for construction of NSW Inland Rail projects
Interim Construction Noise Guideline (ICNG) (DECC, 2009)	Assessment of airborne noise impacts on sensitive receivers
Environmental Criteria for Road Traffic Noise (ECRTN) (EPA, 1999)	Contains guidance for assessing potential sleep disturbance impacts
Road Noise Policy (RNP) (DECCW, 2011)	Assessment of construction traffic impacts
BS 7385 Part 2-1993 Evaluation and measurement for vibration in buildings Part 2, BSI, 1993	Assessment of vibration impacts (structural damage) to non-heritage sensitive structures
DIN 4150:Part 3-2016 Structural vibration – Effects of vibration on structures, Deutsches Institut für Normung, 2016	Screening assessment of vibration impacts (structural damage) to heritage sensitive structures, where the structure is found to be unsound
Assessing Vibration: a technical guideline (DEC, 2006)	Assessment of vibration impacts on sensitive receivers
AS2187.2:2006 Explosives – Storage and use Part 2: Use of explosives	Assessment of impacts from blasting activities
*Construction Noise and Vibration Guideline (Public Transport Infrastructure) (*CNVG-PTI) (Transport for NSW, 2023)	Utilised for minimum working distances for vibration intensive work.

4.2 Noise Management Levels

The noise management levels (NMLs) for residential and other sensitive receivers have been adopted from the CNVMP, as determined in the EIS. Receiver types and locations are shown **Figure 1**.

4.2.1 Residential Receivers

Project-specific NMLs for residential receivers were determined for NCA14 which encompasses all assessable receivers in close proximity to the Olympic Highway bridge upgrades. NMLs for other sensitive receivers are fixed values adopted from the Interim Construction Noise Guideline (ICNG) (DECC, 2009) and outlined in the CNVMP. Residential NMLs for the NCA surrounding the echancement site are shown in **Table 3**.

Table 3 Residential Noise Management Levels

NCA	Noise Management Level (LAeq(15minute) - dBA)				Sleep disturbance Screening Level (RBL +15dB or 52 dB)	Sleep Awakening Reaction Level
	Approved Hours (RBL +10dB)	Out of Hours[1]				
		Daytime (RBL +5dB)	Evening (RBL +5dB)	Night-time (RBL +5dB)		
NCA14	52	47	47	40	52	65

Note 1: Approved Construction Hours are Monday to Saturday 7 am to 6 pm, as defined in CoA E69.

Note 2: Work outside of the Approved Hours is defined as OOHW = Out of Hours Work. Daytime out of hours is Sunday and public holidays between 8 am to 6 pm. Evening is 6pm to 10pm Monday – Sunday (including public holidays). Night-time is 10pm to 7am Monday –Saturday and 10pm to 8am Sunday (including public holidays).

Highly Noise Affected

In addition to the NMLs presented above, the ICNG highly noise affected level (>75 dBA) represents the point above which there may be strong community reaction to noise and is applicable to all residential receivers during approved project hours as outlined in the CNVMP and the ICNG.

Sleep Disturbance

Where the sleep disturbance screening level (RBL + 15 dB or 52 dB, whichever is greater, see **Table 3**) is exceeded, further assessment is required to determine whether the 'awakening reaction' level of L_{Amax} 65 dBA (external) would be exceeded and the likely number of these events. The awakening reaction level is the level above which residents are likely to be awoken from sleep.

4.2.2 Other Sensitive Land Uses and Commercial Receivers

The ICNG NMLs for 'other sensitive' non-residential land uses are shown in **Table 4**.

The ICNG references *AS2107:2016 Acoustics – Recommended design sound levels and reverberation times for building interiors* for criteria for 'other sensitive' receivers which are not listed in the guideline. Neither the ICNG nor AS2107 provide criteria for child care centres so the Association of Australian Acoustical Consultants *Guideline for Child Care Centre Acoustic Assessment* (GCCCAA) has been referenced.

Table 4 NMLs for 'Other Sensitive' Receivers

Land Use	Noise Management Level $L_{Aeq(15minute)}$ (dBA) (Applied when the property is in use)	
	Internal	External
ICNG 'Other Sensitive' Receivers		
Classrooms at schools and other educational institutions	45	55[1]
Hospital wards and operating theatres	45	65[2]
Places of worship	45	55[1]
Active recreation areas (characterised by sporting activities which generate noise)	-	65
Passive recreation areas (characterised by contemplative activities that generate little noise)	-	60

Land Use	Noise Management Level $L_{Aeq(15minute)}$ (dBA) (Applied when the property is in use)	
	Internal	External
Commercial	-	70
Industrial	-	75
Non-ICNG 'Other Sensitive' Receivers		
Hotel – daytime & evening[3]	50	60[1,5]
Hotel – night-time[3]	35	45[1,5]
Child care centres – activity areas[4]	40	50[1,5]
Child care centres – sleeping areas[4]	35	45[1,5]
Library[3]	45	55[1]
Public Building[3]	50	60[1]
Aged Care	Considered as Residential	

Note 1: It is assumed that these receivers have windows partially open for ventilation which results in internal noise levels being around 10 dB lower than the external noise level.

Note 2: It is assumed that these receivers have fixed windows which conservatively results in internal noise levels being around 20 dB lower than the external noise level.

Note 3: Criteria taken from AS2107.

Note 4: Criteria taken from Association of Australian Acoustical Consultants Guideline for Child Care Centre Acoustic Assessment.

Note 5: Some receivers near highways or rail lines may have building façade mitigation and air-conditioning. Where evidence is provided a 20dB reduction from external to internal may be adopted.

4.2.3 Ground-borne Noise

Construction work can cause ground-borne (structure-borne or regenerated) noise impacts in nearby buildings when vibration intensive equipment is in use, such as during tunnelling or excavation work using tunnel boring machines, roadheaders or rockbreakers. Vibration can be transmitted through the ground and into nearby buildings, which can then create audible noise impacts inside the building.

Ground-borne noise NMLs are applicable where ground-borne noise levels are likely to be higher than airborne noise levels, which can occur where work is underground or where surface work is shielded by noise barriers or other structures. Ground-borne noise is generally found to generate impacts during the evening and night-time periods when ambient noise levels are often much lower, and ground-borne noise is more prominent.

The internal ground-borne noise NMLs for residential receivers are shown in **Table 5**.

Table 5 Internal ground-borne NMLs

Receiver Type	Noise Management Level ($L_{Aeq(15minute)}$ – dBA)		
	Daytime[1]	Evening[2]	Night-time[2]
Residential	n/a	40	35

Note 1: Daytime ground-borne noise NMLs are not specified in the ICNG of CoA.

Note 2: Specified in the ICNG and CoA E75.

For other sensitive receivers, the ICNG does not provide guidance in relation to acceptable ground-borne noise levels. For the purpose of this CNVIS, the internal airborne NMLs presented in **Table 4** will also be adopted for ground-borne noise.

4.3 Vibration Criteria

The effects of vibration from construction work can be divided into three categories:

- Those in which the occupants of buildings are disturbed (**human comfort**). People can sometimes perceive vibration impacts when vibration generating construction work is located close to occupied buildings. Vibration from construction work tends to be intermittent in nature and the EPA's Assessing Vibration: a technical guideline (2006) provides criteria for intermittent vibration based on the Vibration Dose Value (VDV), as shown in **Table 6**. While the construction activities for the proposal are generally not expected to result in continuous or impulsive vibration impacts, corresponding criteria are provided in **Table 7**.
- Those where building contents may be affected (**building contents**). People perceive vibration at levels well below those likely to cause damage to building contents. For most receivers, the human comfort vibration criteria are the most stringent and it is generally not necessary to set separate criteria for vibration effects on typical building contents. Exceptions to this can occur when vibration sensitive equipment, such as electron microscopes or medical imaging equipment, are in buildings near to construction work. No such equipment has been identified in the study area.
- Those where the integrity of the building may be compromised (**structural/cosmetic damage**). If vibration from construction work is sufficiently high it can cause cosmetic damage to elements of affected buildings. Industry standard cosmetic damage vibration limits are specified in British Standard BS 7385 and German Standard DIN 4150. The limits are shown in **Table 8** and **Table 9**.

Table 6 Human Comfort Vibration – Vibration Dose Values for Intermittent Vibration

Building Type	Assessment Period	Vibration Dose Value[1] ($m/s^{1.75}$)	
		Preferred	Maximum
Critical Working Areas (eg operating theatres or laboratories)	Day or night-time	0.10	0.20
Residential	Daytime	0.20	0.40
	Night-time	0.13	0.26
Offices, schools, educational institutions and places of worship	Day or night-time	0.40	0.80
Workshops	Day or night-time	0.80	1.60

Note 1: The VDV accumulates vibration energy over the daytime and night-time assessment periods, and is dependent on the level of vibration as well as the duration.

Table 7 Human Comfort Vibration – Preferred and Maximum Weighted Root Mean Square Values for Continuous and Impulsive Vibration Acceleration (m/s^2) 1–80 Hz

Location	Assessment period	Preferred values		Maximum values	
		z-axis	x- and y-axis	z-axis	x- and y-axis
Continuous vibration					
Residential	Daytime	0.010	0.0071	0.020	0.014
	Night-time	0.007	0.005	0.014	0.010
Offices, schools, educational institutions and places of worship	Day or night-time	0.020	0.014	0.040	0.028
Workshops	Day or night-time	0.04	0.029	0.080	0.058
Impulsive vibration					
Residential	Daytime	0.30	0.21	0.60	0.42
	Night-time	0.10	0.071	0.20	0.14
Offices, schools, educational institutions and places of worship	Day or night-time	0.64	0.46	1.28	0.92
Workshops	Day or night-time	0.64	0.46	1.28	0.92

Table 8 Cosmetic Damage – BS 7385 Transient Vibration Values for Minimal Risk of Damage

Group	Type of Building	Peak Component Particle Velocity in Frequency Range of Predominant Pulse	
		4 Hz to 15 Hz	15 Hz and Above
1	Reinforced or framed structures. Industrial and heavy commercial buildings	50 mm/s at 4 Hz and above	
2	Unreinforced or light framed structures. Residential or light commercial type buildings	15 mm/s at 4 Hz increasing to 20 mm/s at 15 Hz	20 mm/s at 15 Hz increasing to 50 mm/s at 40 Hz and above

Note 1: Where the dynamic loading caused by continuous vibration may give rise to dynamic magnification due to resonance, especially at the lower frequencies where lower guide values apply, then the guide values may need to be reduced by up to 50%.

Table 9 Cosmetic Damage – DIN 4150 Guideline Values for Short-term Vibration on Structures

Group	Type of Structure	Guideline Values Vibration Velocity (mm/s)				
		Foundation, All Directions at a Frequency of			Topmost Floor, Horizontal	Floor Slabs, Vertical
		1 to 10 Hz	10 to 50 Hz	50 to 100 Hz	All frequencies	All frequencies
1	Buildings used for commercial purposes, industrial buildings and buildings of similar design	20	20 to 40	40 to 50	40	20
2	Residential buildings and buildings of similar design and/or occupancy	5	5 to 15	15 to 20	15	20
3	Structures that, because of their particular sensitivity to vibration, cannot	3	3 to 8	8 to 10	8	20[1]

Group	Type of Structure	Guideline Values Vibration Velocity (mm/s)				
		Foundation, All Directions at a Frequency of			Topmost Floor, Horizontal	Floor Slabs, Vertical
		1 to 10 Hz	10 to 50 Hz	50 to 100 Hz	All frequencies	All frequencies
	be classified as Group 1 or 2 **and** are of great intrinsic value (eg heritage listed buildings)					

Note 1: It may be necessary to lower the relevant guideline value markedly to prevent minor damage.

4.3.1 Heritage Buildings or Structures

Heritage listed buildings and structures should be considered on a case-by-case basis but BS 7385 notes that buildings of historical value should not be assumed to be more sensitive to vibration, unless structurally unsound. Where a heritage building is deemed to be sensitive, the more stringent DIN 4150 Group 3 guideline values in **Table 9** can be applied.

Heritage Structures

Junee Railway Station and yard, Junee Post Office and the Jadda Centre (former Athenium Theatre) yard are listed on the State Heritage Register and several buildings such as the Junee Court House and other hotels and commercial buildings are Local Heritage Items. The residential area bound by Meldrums Lane to the north and Bligh Street to the south is part of the Junee Heritage Conservation Area. The various state and local heritage items in proximity to the Olympic Highway Underbridge work area are shown in **Figure 1**.

Table 10 includes heritage structures from the State Heritage Register, Local Heritage Items and Local Environment Plan that are within close proximity to the construction work area within Junee with the closest sensitive heritage structures over 150 m south of the works area.

Table 10 Heritage Items Nearby Construction Work Areas

Heritage Item	Listing	Construction/Condition
Junee Railway Station	State heritage register 01173, Local (Junee LEP) I8	The Junee Railway Station is a substantial and ornate structure, built in the Victorian Free Classical style. It comprises a highly symmetrical, single storey building. The structure is in reasonably good condition.
Junee Railway refreshment rooms	State heritage register 01173, Local (Junee LEP) I10	
Junee Heritage conservation area	Local (Junee LEP) C1	The conservation area is partially located within and adjacent to the railway corridor. The conservation area includes a majority late nineteenth century buildings, but some 1920s-1930s structures are present.
Humphrys on Loftus (6 Humphrys St)	Local (Junee LEP) I7	It is a Federation Free Classical two storey brick and stucco building, with first floor balcony / awning over footpath. The structure is in good condition.
Broadway Stores Group (102-116 Broadway)	Local (Junee LEP) I16	The building consists of multiple smaller stores within the overall structure. The overall design is consistent with other heritage items in close proximity. The structure appears to be in good condition.

Heritage Item	Listing	Construction/Condition
ANZ Bank (97 Broadway St)	Local (Junee LEP) I14	The building is an actively operating as a bank. The building is a two-storey symmetrical Federation Free Style brick bank and residence. Red brick building has rendered bands and prominent arched entry and balcony over. Terracotta tiled roof has exposed rafters at eaves and prominent chimneys. The structure is generally in good condition.
Jadda Centre (The Broadway)	State heritage register 01687	The building is substantial, built in brick with a cement-rendered facade. There is a hung cantilevered awning with a deep fascia, below which are two shopfronts and doors to the theatre. The awning fascia and soffit appear to have been replaced in recent years. The building is generally in good condition but some restoration is advisable.

Further information on some of the heritage items in **Table 10** are provided in the Construction Cultural Heritage Management Plan (CCHMP). No structures nearby the work areas identified in this CNVIS are flagged as structurally unsound in the CCHMP.

Pre and post-condition surveys of heritage structures are to be conducted when relevant (ie if the heritage buildings are within the minimum working distances for heritage items for nominated vibration-intensive equipment) refer to **Section 4.3.3** and **Section 6.1**.

4.3.2 Buried Pipework and Utilities

The German Standard DIN 4150-3:1999 “Structural Vibration Part 3: Effects of vibration in structures” provides guideline values for evaluating the effect of vibration on buried pipework. The values are based on the assumption that pipes have been manufactured and laid using current technology. Additional considerations may be required at junctions. The recommended limits for short term vibration to ensure minimal risk of damage are presented numerically in **Table 11**.

Table 11 Guideline Values for Short Term Vibration on Buried Pipework

Line	Pipe Material	Guideline value at the Pipe[1,2] (PPV mm/s)
1	Steel (including welded pipes)	100
2	Clay, concrete, reinforced concrete, pre stressed concrete, metal (with or without flange)	80
3	Masonry, plastic[3]	50

Note 1: Mounting equipment directly onto pipes may not be possible. If the vibration source is not immediately next to the pipework, measurements can be made on the ground surface to obtain an estimate. Generally, this vibration level will be greater than the level measured directly on the pipework.

Note 2: The guideline values may be reduced by 50% without further analysis when evaluating the effects of long-term vibration on buried pipework.

Note 3: Drainpipes shall be evaluated using the values given for Line 3.

Buried Pipework and Utilities

No buried pipework or utilities have been identified in this CNVIS at risk of impact from vibration. Therefore, no additional consideration or assessment has been undertaken in relation to buried pipework and utilities. Where buried pipework or utilities are uncovered during works, they should be identified and managed in accordance with the measures outlined in the CNVMP.

4.3.3 Minimum Working Distances for Vibration Intensive Work

Minimum working distances for typical vibration intensive construction equipment have been sourced from the Transport for NSW (TfNSW) Construction Noise and Vibration Guideline (Public Transport Infrastructure) (CNVG-PTI) and are shown in **Table 12**. The minimum working distances are for both cosmetic damage (from BS 7385 and DIN 4150) and human comfort (from the NSW EPA Assessing Vibration: a technical guideline). They are calculated from empirical data which suggests that where work is further from receivers than the quoted minimum distances then impacts are not considered likely.

The minimum working distances listed in the CNVG were used to derive the minimum working distances required for cosmetic damage to industrial and heavy commercial buildings (also reinforced or framed structures). The following pseudo-power law relationship has been used in the derivations:

$$V_2 = V_1 \times \left(\frac{D_1}{D_2}\right)^B$$

where a site exponent value of B = 1.6 is adopted for the calculations, as per AS2187.2:2006

Table 12 Recommended Minimum Working Distances from Vibration Intensive Equipment

Plant Item	Rating/Description	Minimum Distance			
		Cosmetic Damage			Human Response (NSW EPA Guideline)[2]
		Residential and Light Commercial (BS 7385)	Heritage Items[1] (DIN 4150, Group 3)	Industrial and Heavy Commercial (BS 7385)	
Vibratory Roller	<50 kN (1–2 tonne)	5 m	11 m	3 m	15 m to 20 m
	<100 kN (2–4 tonne)	6 m	13 m	3 m	20 m
	<200 kN (4–6 tonne)	12 m	25 m	6 m	40 m
	<300 kN (7–13 tonne)	15 m	31 m	8 m	100 m
	>300 kN (13–18 tonne)	20 m	40 m	10 m	100 m
	>300 kN (>18 tonne)	25 m	50 m	12 m	100 m
Small Hydraulic Hammer	300 kg (5 to 12 t excavator)	2 m	5 m	1 m	7 m
Medium Hydraulic Hammer	900 kg (12 to 18 t excavator)	7 m	15 m	4 m	23 m
Large Hydraulic Hammer	1,600 kg (18 to 34 t excavator)	22 m	44 m	11 m	73 m
Vibratory Pile Driver	Sheet piles	2 m to 20 m	5 m to 40 m	1 to 10 m	20 m
Piling Rig – Bored	≤ 800 mm	2 m (nominal)	5 m	1 m	4 m
Jackhammer	Hand held	1 m (nominal)	3 m	1 m	2 m
Ballast Tamping[2]	N/A	5 m	10 m	3 m	30 m

Note 1: Minimum working distances for heritage items that have been identified as structurally unsound or otherwise particularly sensitive to vibration. These distances have been calculated based on the 2.5 mm/s PPV criteria from DIN 4150 and the cosmetic damage minimum working distances presented in the CNVG-PTI with reference to BS 7385.

Note 2: Based on SLR measurement data. The human response minimum working distance for Ballast Tamping is determined based on a residential night-time preferred VDV criterion.

The minimum working distances are indicative and will vary depending on the particular item of equipment and local geotechnical conditions. The distances apply to cosmetic damage of typical buildings under typical geotechnical conditions.

4.4 Traffic on Surrounding Roads

The potential impacts from project related traffic on the surrounding public roads are assessed using the NSW EPA *Road Noise Policy* (RNP). An initial screening test is first applied to evaluate if existing road traffic noise levels are expected to increase by more than 2.0 dB. Where this is considered likely, further assessment is required using the RNP criteria shown in **Table 13**.

Table 13 RNP/NCG Criteria for Assessing Traffic on Public Roads

Road Category	Type of Project/Land Use	Assessment Criteria (dBA)	
		Daytime (7 am – 10 pm)	Night-time (10 pm – 7 am)
Freeway/ arterial/ sub-arterial roads	Existing residences affected by additional traffic on existing freeways/arterial/sub-arterial roads generated by land use developments	$L_{Aeq(15hour)}$ 60 (external)	$L_{Aeq(9hour)}$ 55 (external)
Local roads	Existing residences affected by additional traffic on existing local roads generated by land use developments	$L_{Aeq(1hour)}$ 55 (external)	$L_{Aeq(1hour)}$ 50 (external)

5.0 Noise Assessment

The potential construction noise levels from the Project have been predicted using ISO 9613:2 algorithm in SoundPLAN noise modelling software. The model includes ground topography, buildings and representative noise sources from the Project.

5.1 Work Scenarios

Noise modelling scenarios have been determined based on key Project noise generating stages, supplied by the Project team. A detailed description of each work scenario is provided in **Table 14**.

A summary of construction work periods and schedule required for each scenario and the total sound power levels (Lw) are provided in **Table 15**. The location of the work scenario is shown in **Figure 2**.

Table 14 Work Scenario Descriptions

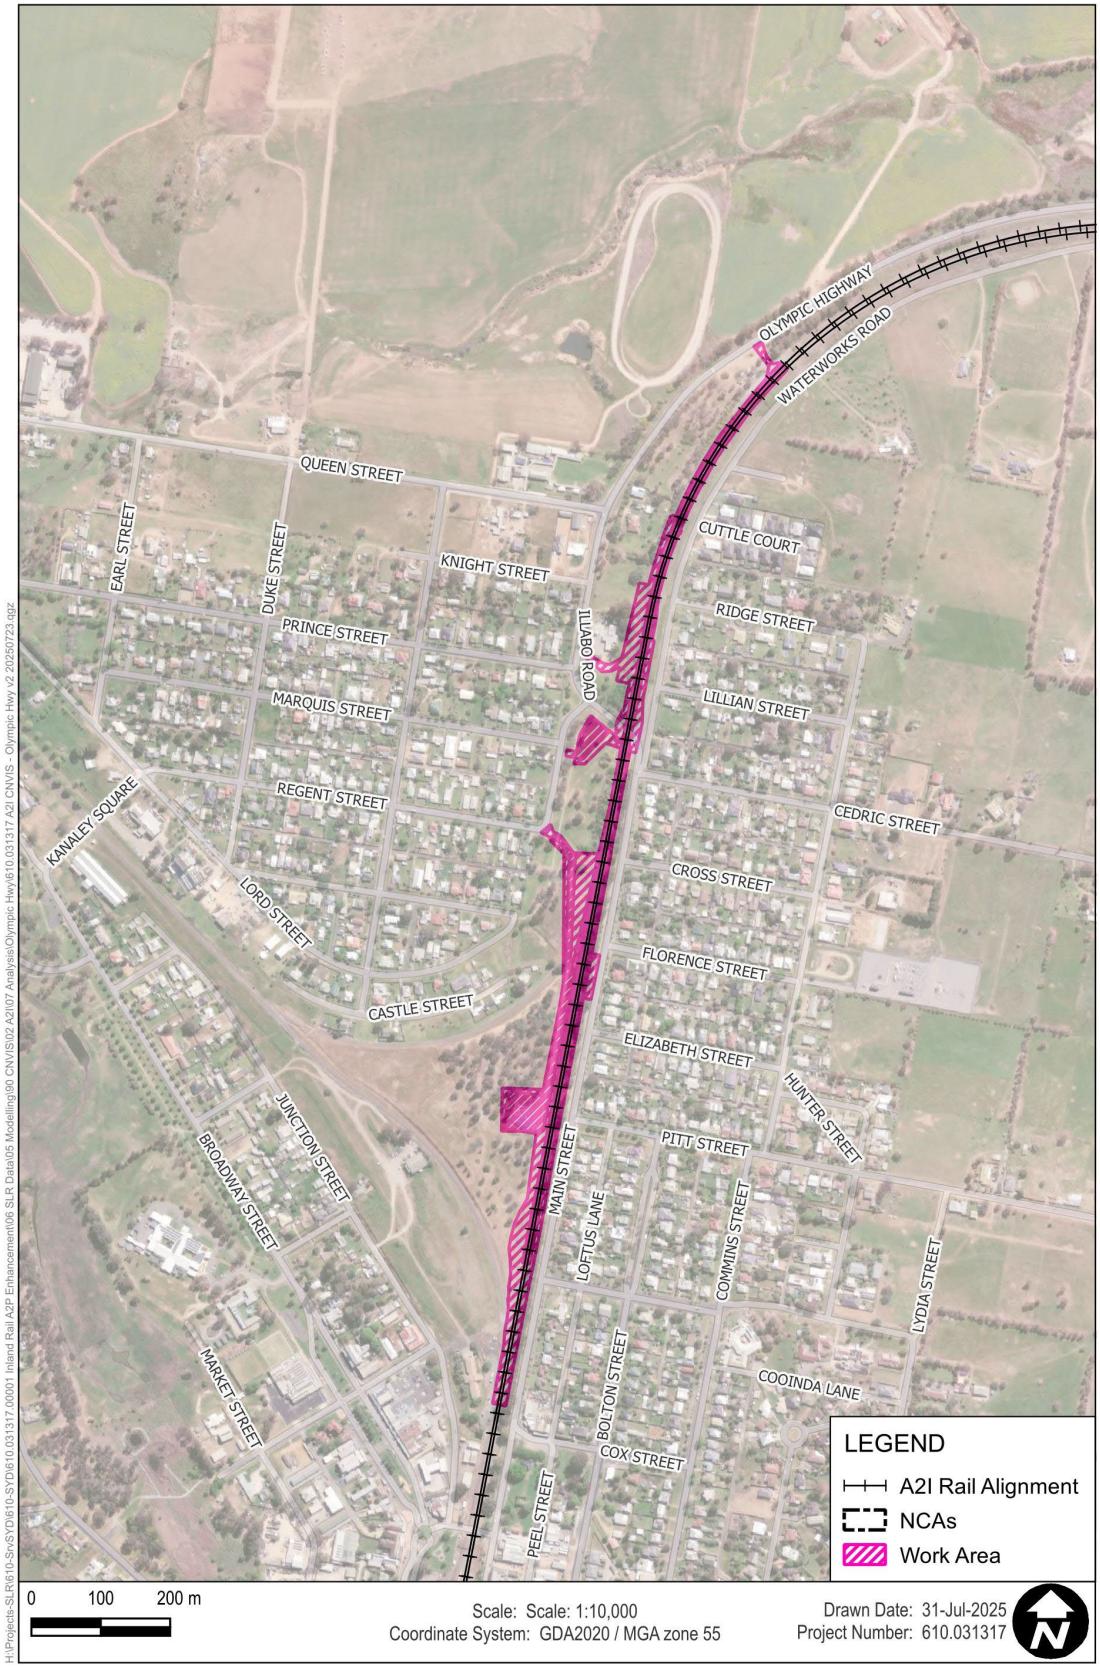

ID	Scenario	Description	Total Lw
W.001	Site Establishment / Demobilisation	• Site Compound delivery and set up • Laydown and haul road construction	115
W.002	Compound Operation	• Operation of the site compound • Delivery of materials/equipment	113
W.003	Geotechnical Investigation	• Geotechnical investigations across the site	114
W.004	Driver Platform Surveys	• Design and geotechnical investigations	113
W.005	Driver Platform Work	• Construction work for driver platforms	116
W.006	Track Work – Peak	• Track work including highly noise intensive work	120
W.007	Track Work – Typical	• Track work excluding highly noise intensive work	115
W.008	Track Tamping	• Track tamping work following track work	116

Table 15 Scenarios and Periods of Work

ID	Scenario	Hours of Work				Indicative Start Date	Likely Duration[5]
		Approved Hours	Out-of-Hours Work[4]				
			Day OOH[1]	Evening[2]	Night[3]		
W.001	Site Establishment / Demobilisation	✓	✓	-	-	Jul-26	2 months
W.002	Compound Operation	✓	✓	✓	✓	Jul-26	2 months
W.003	Geotechnical Investigation	✓	✓	-	-	Jul-26	1 month
W.004	Driver Platform Surveys	✓	-	-	-	Jul-25	1 week
W.005	Driver Platform Work	✓	✓	✓	✓	Aug-25	2 months
W.006	Track Work – Peak	✓	✓	✓	✓	Jul-26	2 months
W.007	Track Work – Typical	✓	✓	✓	✓	Jul-26	2 months
W.008	Track Tamping	✓	✓	✓	✓	Jul-26	2 months

Note 1: Daytime out of hours is 8 am to 6 pm on Sunday and public holidays.
Note 2: Evening is 6 pm to 10 pm Monday – Sunday (including public holidays).
Note 3: Night is 10 pm to 7 am Monday – Saturday and 10pm to 8am Sunday (including public holidays).
Note 4: Where works are expected to occur outside of the standard working hours, further detail around the specific work tasks, duration and justification of OOHW must be identified in the OOHW permit, required by the OOHW Protocol or EPL.
Note 5: Works scenarios may occur simultaneously during enhancement works and the total duration for the completion of all works is expected to be approximately 2 months.

Figure 2 Construction Work Locations

5.1.1 Modelling Scenarios and Equipment

The assessment uses 'realistic worst-case' scenarios to determine the impacts from the noisiest 15-minute period that is likely to occur for each work scenario, as required by the ICNG. Sound power levels (L_W) for the construction equipment used in the modelling are listed in **Appendix B**.

5.2 Predicted Noise Levels

The following overview is based on the predicted impacts at the most affected receivers and is representative of the worst-case noise levels that are likely to occur during construction.

The assessment shows the predicted 'mitigated' impacts based on the exceedance of the noise management levels, as per the categories in **Table 16**. Recommendations for mitigation and management are provided in **Section 8.0**.

Table 16 Exceedance Bands and Impact Colouring

Subjective Classification	Exceedance of Noise Management Level		Impact Colouring
	Daytime	Out of Hours	
Negligible	No exceedance	No exceedance	
Noticeable	-	1 to 5 dB	
Clearly Audible	1 to 10 dB	6 to 15 dB	
Moderately Intrusive	11 to 20 dB	16 to 25 dB	
Highly Intrusive	> 20 dB	> 25 dB	

A summary of the number of buildings where NML exceedances were predicted for the various work scenarios is shown in **Table 17**. The number of receivers above the 'highly noise affected' (HNA) level are also included in the table. Maps of the predicted worst-case noise impacts are presented in **Appendix C**.

The assessment presents the combined predicted noise impacts for each scenario. Meaning, the worst-case result at each receiver is considered from all potential work areas where each scenario is to be undertaken.

The assessment is generally considered conservative as the calculations assume several items of construction equipment are in use at the same time within individual scenarios. As outlined in **Section 5.1.1**, the assessment uses 'realistic worst-case' scenarios to determine the impacts from the noisiest 15-minute period that is likely to occur for each work scenario.

The exceedances shown in **Table 17** are therefore representative of a 'realistic worst-case' 15-minute period, and are unlikely to occur for extended periods of time throughout the entire construction period at any given receiver.

The indicative work durations presented in **Table 15** represent a window of time where the scenarios could occur, and does not represent the entire duration of the exceedances shown in **Table 17**. In reality, there would frequently be periods when construction noise levels are much lower than the worst-case levels predicted as well as times when no equipment is in use and no noise impacts occur.

Table 17 Overview of NML Exceedances

ID	Scenario	Number of Receivers																	
		HNA[1]	With NML exceedance[2]																
			Approved Daytime			Out of Hours												Sleep Disturbance	Sleep Awakening
						Daytime OOH				Evening				Night-time

Note 1: Highly noise affected, based on ICNG definition (i.e. predicted LAeq(15minute) noise at residential receiver is greater than 75 dBA.

Note 2: Based on worst-case predicted noise levels

A summary of the predicted worst-case noise levels is shown below for each work area:

Residential Receivers

- 'Moderately intrusive' noise impacts are predicted at the closest residential receivers for all scenarios during the approved daytime period and all scenarios occurring during out-of-hours periods.
- 'Highly intrusive' noise impacts are predicted at the closest residential receivers to the work for scenarios *W.001, W.003* to *W.006* and *W.008* during the approved daytime period and *W.001, W.003*, *W.005*, *W.006* and *W.008* during the OOH daytime period.
- 'Highly intrusive' noise impacts are predicted at the closest residential receivers to the work for scenarios *W.005, W.006* and *W.008* during the evening periods.
- 'Highly intrusive' noise impacts are predicted for all scenarios with the potential to occur during the night-time period (ie *W.002* and *W.005* through *W.008)*. The addresses of the residential receivers impacted by OOHW are provided in **Appendix D**.
- Highly noise affected receivers are predicted during *W.003*, *W.005* and *W.006*, which include highly noise intensive equipment. The highest number of HNA receivers is predicted during *W.006*, due to the extent of the work area.
    - The HNA impacts generated during *W.006* are predicted when track work occurs at the closest work location to each receiver. When track work occurs further from these receivers, impacts are expected to be lower.
- Noise levels are predicted to exceed the sleep disturbance screening level and the 'awakening' criteria at the nearest receivers for all work scenarios occurring during the night-time period. Sleep disturbance impacts would generally be caused by heavy vehicle movements and more noise intensive equipment. Where reasonable and feasible, these activities should be limited to the less sensitive periods to avoid noise impacts during more sensitive out-of-hours periods (refer to **Section 8.0**). The number of awakening events would depend on several factors, including the equipment being used, the duration of noisy work and the distance of the work to each residential receiver. Further detail around the specific OOHW, (eg duration and justification) must be identified in the OOHW permit, refer **Section 2.4**.

Other Sensitive Receivers

- 'Clearly Audible' noise impacts are predicted at the closest 'other sensitive' receivers for scenarios *W.001*, *W.003,* and *W.006* through *W.008* during the approved daytime periods and *W.*003 and *W.006* through *W.008* during out-of-hours daytime periods.
- 'Clearly Audible' noise impacts are also predicted for *W.006* to *W.008* during the night-time period and for scenario *W.007* and *W.008* during the evening period.
    - Worst-case 'clearly audible' impacts are predicted at other sensitive receivers for all other scenarios with the potential to occur during the night-time period.
- 'Moderately Intrusive' noise impacts are predicted at the closest 'other sensitive' receivers for scenarios *W.003* and *W.006* to *W.008* during the approved daytime period, *W.003* and *W.006* during the daytime out-of-hours period and for scenario *W.006* during the evening and night-time periods.
- Other sensitive receivers should only be considered impacted 'when in use'.

Review of the predictions shows that both the sleep disturbance screening level and sleep awakening reaction level are likely to be exceeded when night work occurs near residential receivers. The receivers which would potentially be affected by sleep awakening impacts are generally the same receivers where ‘moderately intrusive’ and ‘highly intrusive’ night-time impacts have been predicted (refer to **Appendix C**). These receivers may be eligible for respite offers (RO), agreements with owners (AO) or alternative accommodation (AltA), refer **Section 8.4**

Furthermore, for scenarios where 'highly intrusive' impacts are predicted, noisy activities will be scheduled during standard daytime hours, where feasible, to minimise disruption during OOHW periods. It is noted however, that this work will occur during a rail possession and will be undertaken within the limitations of the possession.

All appropriate feasible and reasonable construction noise mitigation measures will be applied to work as outlined in **Section 8.0**.

5.3 Ground-borne Noise

Ground-borne construction noise impacts from the Project are not anticipated as vibration intensive work with the potential to generate perceptible ground-borne noise, is not included in the scope of work. Vibration intensive work for the Project will be completed outdoors meaning airborne noise levels at the nearest receivers are expected to be higher than the corresponding internal ground-borne noise levels.

Where airborne noise levels are higher than ground-borne noise levels it is not necessary to evaluate potential ground-borne noise impacts and as such, they have not been considered further for this assessment.

6.0 Vibration Assessment

Vibration intensive items of equipment that would be required during work assessed in this CNVIS include a vibratory roller and a ballast tamper. These items of equipment are required during the work as shown in **Table 18**.

The potential impacts during vibration intensive work have been assessed using the Transport CNVG-PTI minimum working distances for cosmetic damage and human response shown in **Table 18**.

Table 18 Vibration Intensive Equipment

ID	Scenario	Plant Item/ Rating/Description	Minimum Distance			
			Cosmetic Damage			Human Response (NSW EPA Guideline)
			Residential and Light Commercial (BS 7385)	Heritage Items (DIN 4150, Group 3)	Industrial and Heavy Commercial (BS 7385)	
W.003	Geotechnical Investigation	Vibratory Roller <50 kN (1–2 tonne)	5 m	11 m	3 m	15 m to 20 m
W.006	Track Work - Peak	Vibratory Roller <300 kN (7–13 tonne)	15 m	31 m	8 m	100 m
W.008	Track Tamping	Ballast Tamper	5 m	10 m	3 m	30 m

Vibration offset distances have been determined from the TfNSW CNVG-PTI minimum working distances for cosmetic damage and human comfort (see **Table 12** and the assessment is summarised in **Figure 3** to **Figure 5**). The offset distances are representative of the highest vibration levels that would likely be experienced by the nearest receivers when work occurs nearby.

For most construction activities, vibration emissions are intermittent in nature and for this reason, higher vibration levels occurring over shorter time periods are allowed.

In the event that additional work is undertaken which requires the use of other items of plant identified than those identified in **Table 18**, a vibration impact assessment must be conducted prior to the commencement of work.

Figure 3 Construction Vibration Minimum Working Distances – Small Vibratory Roller <50 kN (1–2 tonne) (W.003)

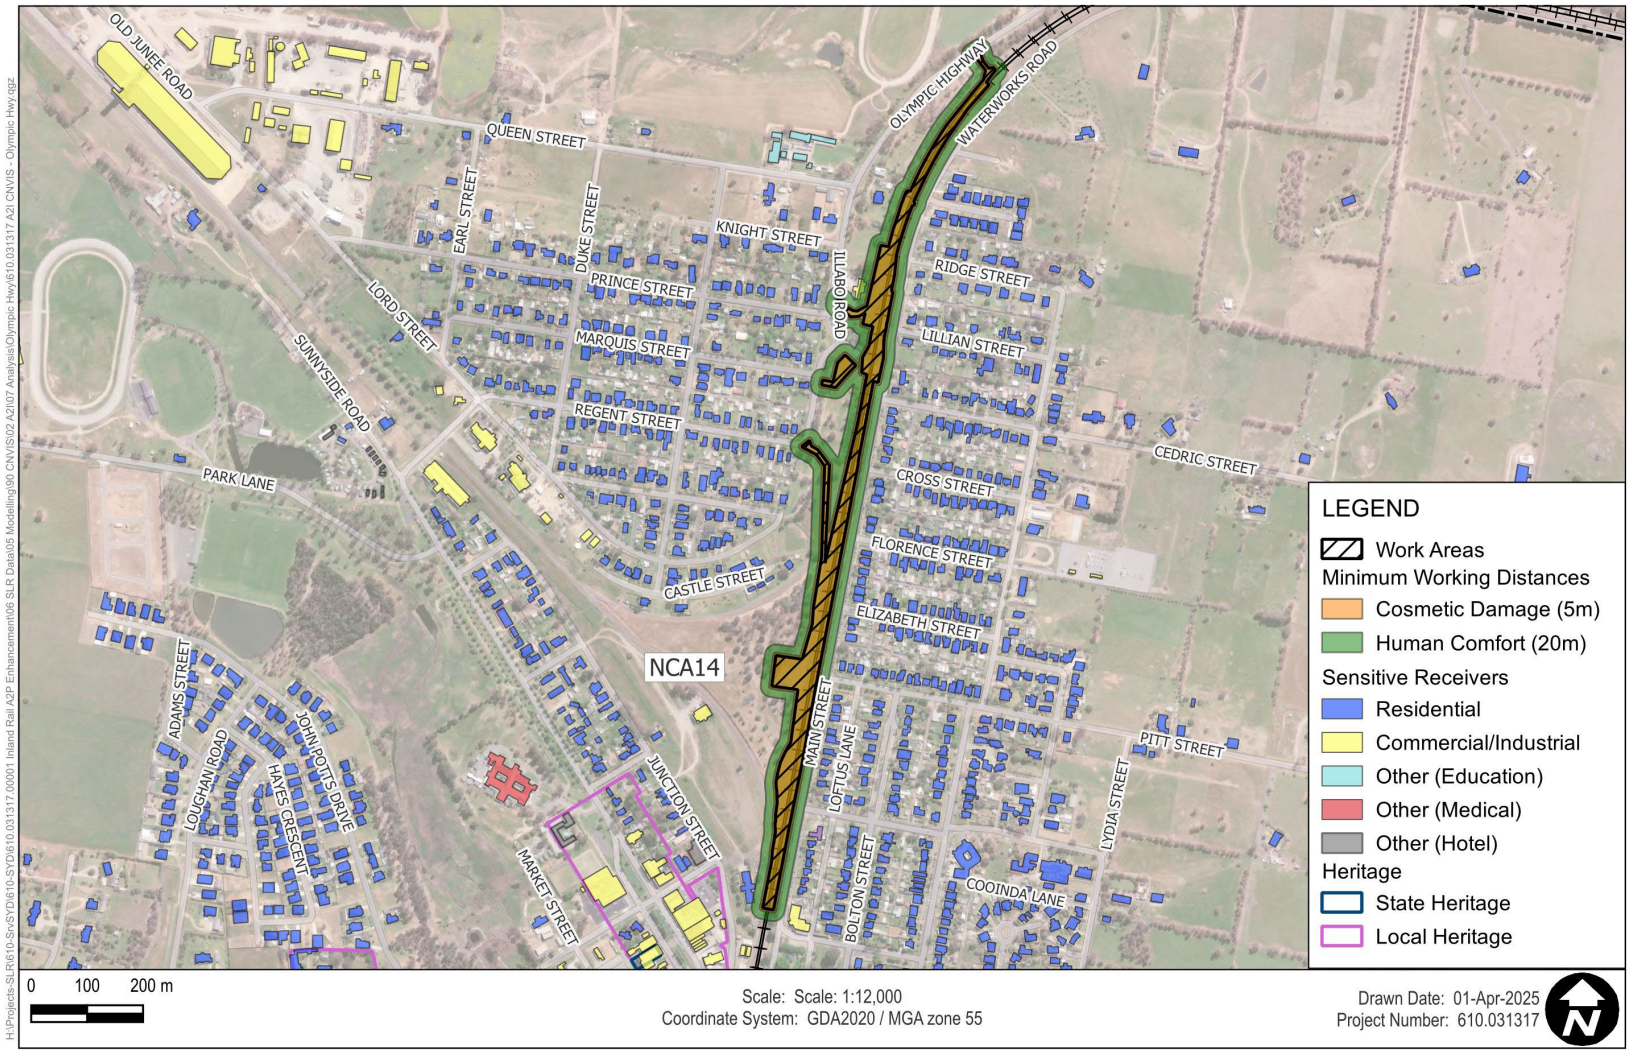

Figure 4 Construction Vibration Minimum Working Distances – Large Vibratory Roller <300 kN (7–13 tonne) (W.006)

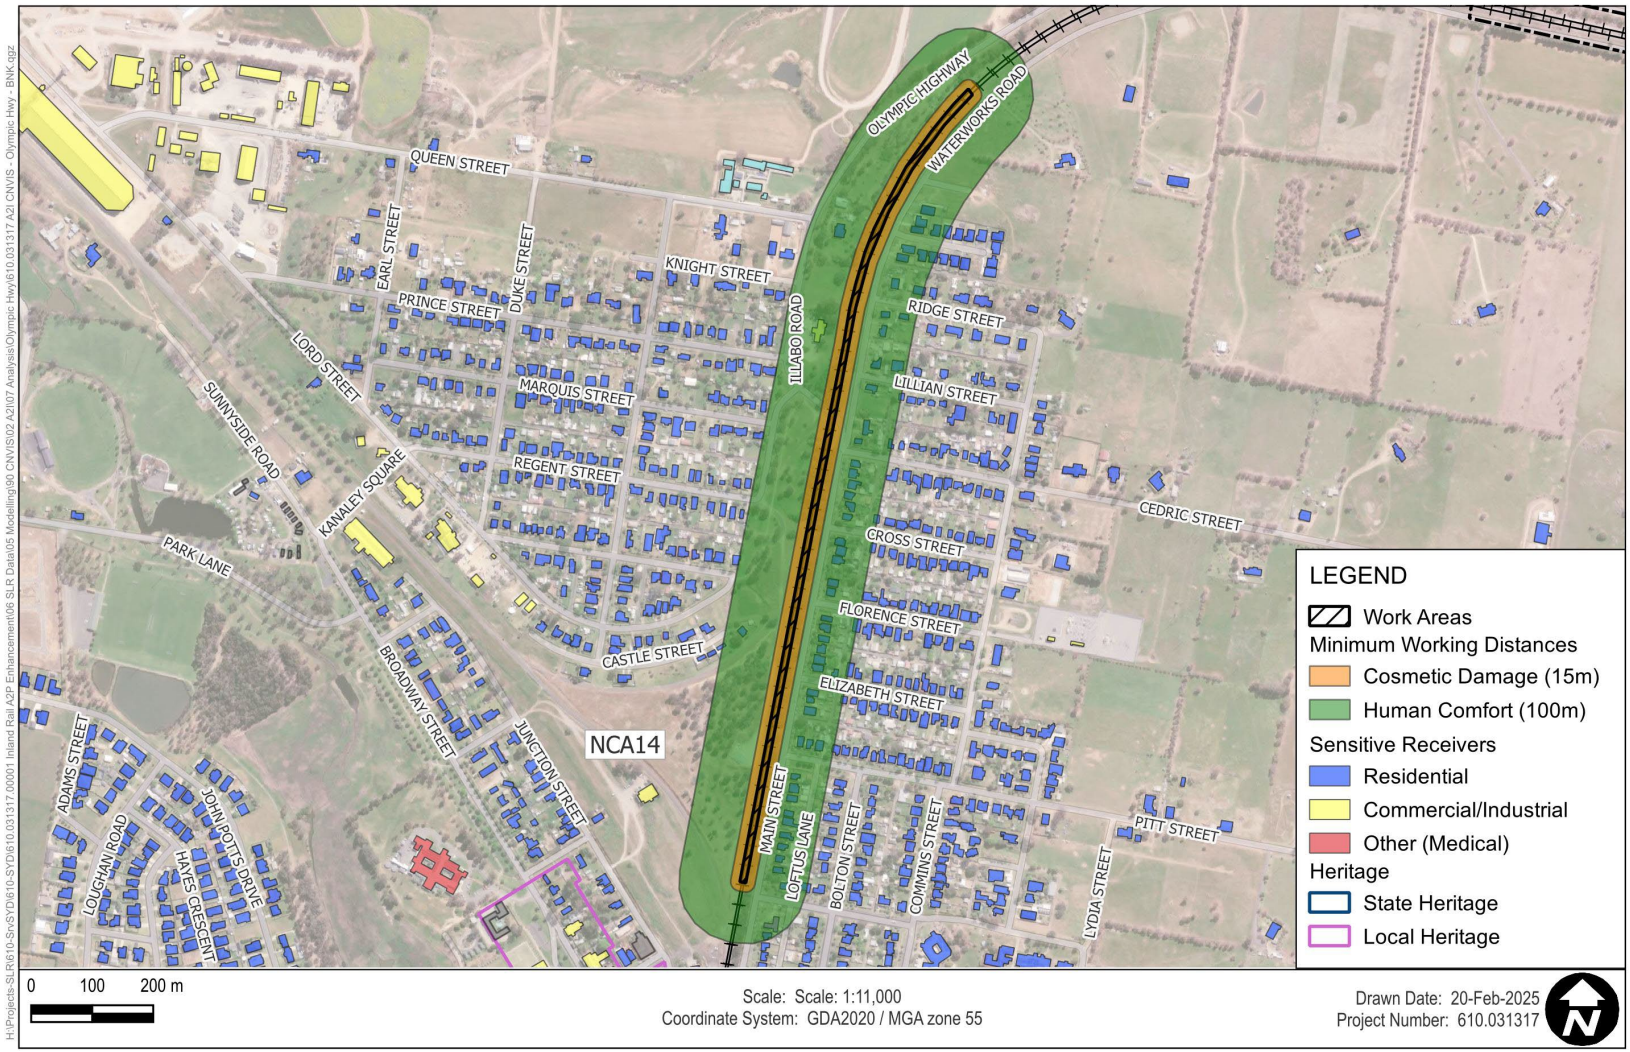

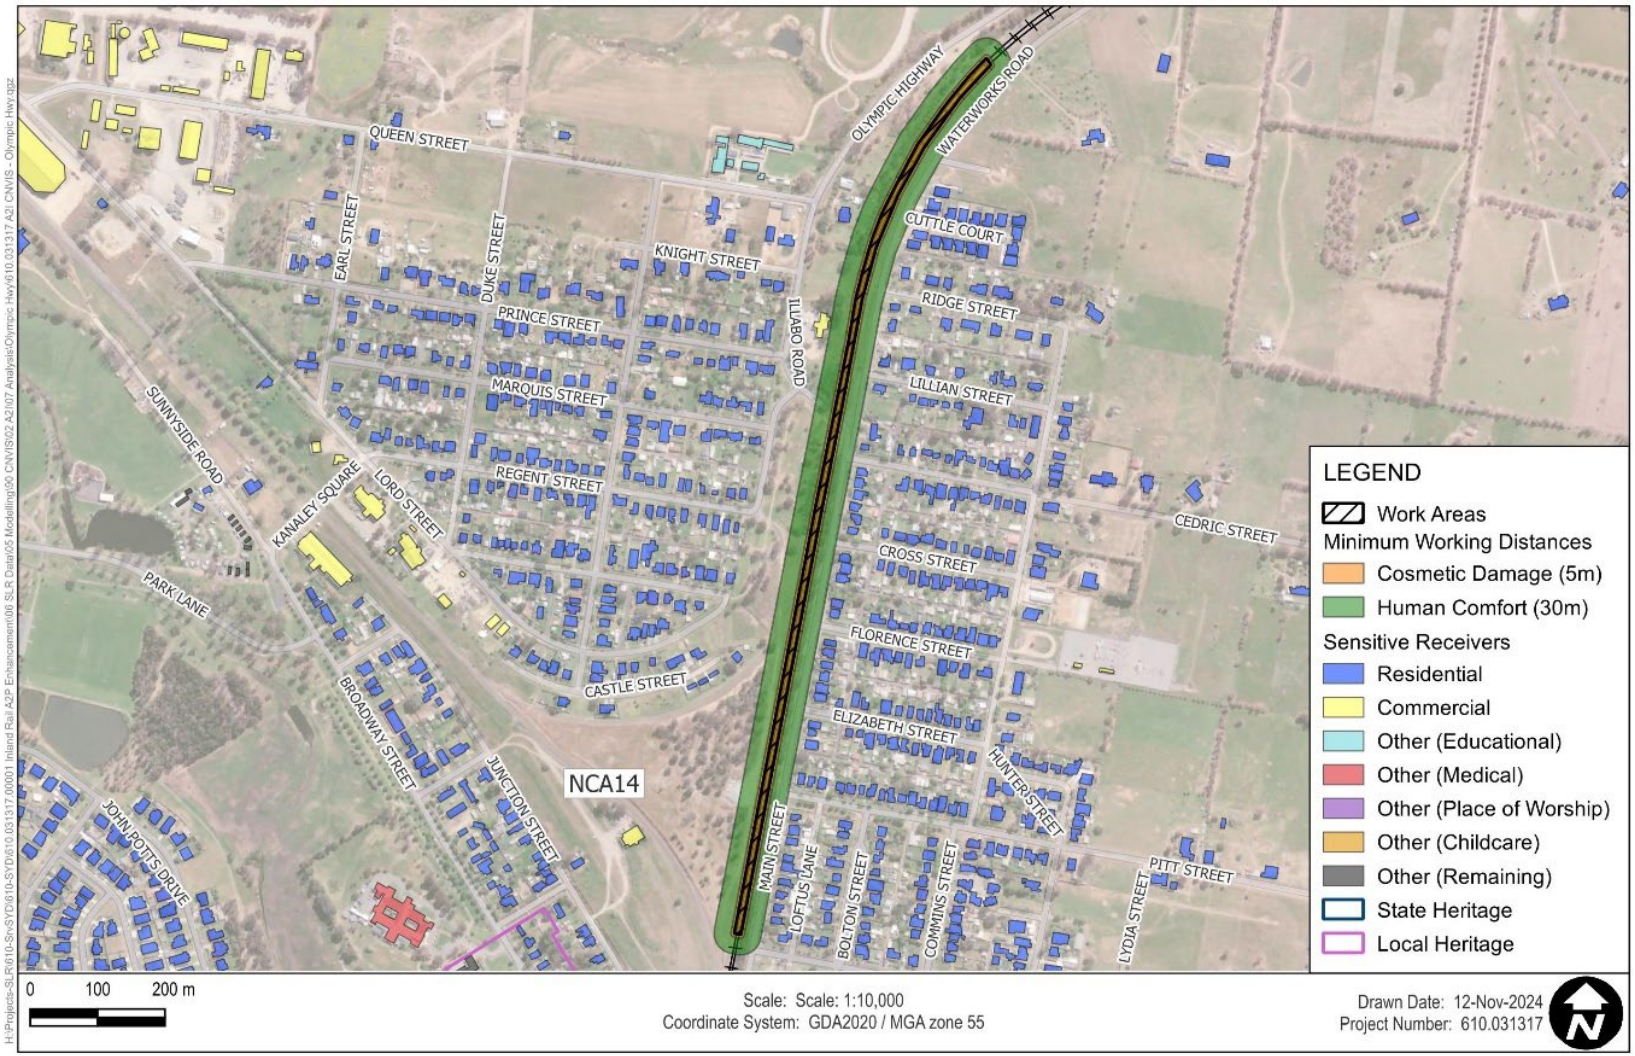

Figure 5 Construction Vibration Minimum Working Distances – Ballast Tamping (W.008)

6.1 Cosmetic Damage Assessment

Figure 3 to **Figure 5** show that all nearby buildings fall outside the minimum working distance for cosmetic damage during vibratory rolling (*W.003* and *W.006*) and ballast tamping (*W.008*).

Feasible and reasonable construction vibration mitigation measures should be applied where vibration intensive work is required within the minimum working distances. Construction vibration mitigation and management measures are discussed in **Section 8.0**.

As outlined in **Section 6.0**, where additional work is undertaken that requires the use of other items of vibration generating equipment, a vibration impact assessment must be conducted prior to the commencement of work.

In accordance with CoA E122, property damage caused directly or indirectly by the construction or operation must be rectified at no cost to the owner. Alternatively, compensation may be provided for the property damage as agreed with the property owner.

Heritage Structures

All heritage structures identified in **Table 10** are located outside the minimum working distances for cosmetic damage. Therefore, vibration impacts to heritage structures are not expected.

If other vibration intensive activities are required within minimum working distances to heritage structures, a building condition assessment should be undertaken of the heritage item/s to assess if they are considered to be sensitive to vibration prior to vibration work commencing.

6.2 Human Comfort Assessment

Figure 3 (*W.003*) and **Figure 4** (*W.006*) show that receivers within close proximity to the work areas have the potential to fall within the human comfort minimum working distances and occupants of these buildings may be able to perceive vibration impacts at times when vibratory rollers are in use nearby. Where impacts are perceptible, they would likely only be apparent for relatively short durations when vibration intensive equipment is in use nearby.

Figure 5 shows that all receivers are outside the human comfort minimum working distance during track tamping (*W.008*).

Feasible and reasonable construction vibration mitigation measures should be applied where vibration intensive work is required within the minimum working distances. Construction vibration mitigation and management measures are discussed in **Section 8.0**.

7.0 Construction Traffic Assessment

The EIS identified that during the construction phase of the project, heavy vehicles would be required for materials and equipment delivery while light vehicles will transport workers to and from the site. This additional road traffic may impact receivers along the proposed transport routes.

No additional information has been provided regarding construction road traffic, therefore a summary of the predicted daytime traffic noise levels from the EIS is shown in **Table 19**.

Table 19 Construction Traffic Assessment

Traffic Route	Road Type	Predicted Construction Traffic Noise (Both Directions) $L_{Aeq\ (Period)}$		Exceed base criterion? Day[1] (7am – 10pm)	Potential Increase > 2dB	Potential Noise Impact
		Existing	Existing + Proposed			
Olympic Highway underbridge						
Main Street (Olympic Highway)	Arterial	54.3	57.6	No	Yes	No
Illabo Road	Local	46	50	No	Yes	No

Note 1: Freeway/arterial/sub-arterial roads: $L_{Aeq(15hour)}$ 60dBA(external)
Local roads: $L_{Aeq(1hour)}$ 55dBA (external)

The EIS found that construction traffic associated with the Olympic Highway Underbridge work on public roads is compliant with the road traffic noise goals during the daytime period.

The EIS did not assess construction traffic during the night-time period, and no additional information has been provided regarding construction road traffic. Therefore, it is conservatively assumed that where night-time construction traffic is required, impacts would be experienced by residences along construction routes on sub-arterial and local roads within close proximity to the work sites. Night-time noise impacts are not anticipated on arterial roads.

7.1 Traffic Diversions

During construction works at the Olympic Highway Underbridge, traffic diversions are required while the underbridge is closed (ie during a rail possession). The proposed route will divert traffic along Queen Street and Lord Street to the railways crossing at Broadway before rejoining the Olympic Hwy. The proposed diversion route is shown in **Figure 6.**

It has been conservatively assumed that all diversion traffic will travel along the entire diversion route. The traffic volumes used in the assessment are shown in **Table 20**.

Figure 6 Traffic Diversion Route

Table 20 Construction Traffic Volumes

Traffic Route	Road Type	Period	Existing Traffic Volumes[1,3]		Construction Traffic Volumes[1]	
			Light Vehicles	Heavy Vehicles[4]	Light Vehicles	Heavy Vehicles
Queen Street	Local	Day	-[2]	-[2]	136	22
		Night	-[2]	-[2]	39	12
Lord Street / Broadway	Sub-arterial / Arterial	Day	4028	83	1360	211
		Night	218	5	122	54
Olympic Highway	Arterial	Day	2866	457	1360	211
		Night	135	22	122	54

Note 1: Volumes are two-way movements

Note 2: Existing traffic volumes not available. As it is a Local road, no assessment of existing traffic noise has been conducted.

Note 3: Existing Traffic volumes during the diversion have been sourced from publicly available historic traffic counts in the project area (ie TfNSW Traffic Volume Viewer).

Note 4: Heavy vehicle percentages have been adopted from the EIS on roads where data is not available.

A summary of the predicted construction traffic diversion noise impacts is shown in **Table 21**.

Table 21 Construction Traffic Diversion Assessment

Traffic Route	Road Type	Predicted Construction Traffic Noise LAeq (Period)				Exceed base criterion? Day[1] (7am – 10pm)	Exceed base criterion? Night[2] (10pm - 7am)	Potential Increase > 2dB[1]	Potential Noise Impact[1]
		Existing		Existing + Proposed					
		Day	Night	Day	Night				
Queen St	Local	-	-	63.0	61.5	Yes	Yes	Yes	Yes
Lord St	Sub-arterial	58.5	49.8	60.9	55.4	Yes	Yes	Yes	Yes
Broadway	Arterial	58.8	50.1	61.2	55.7	Yes	Yes	Yes	Yes
Olympic Hwy	Arterial	62.7	53.4	64.3	58.0	Yes	Yes	Yes	Yes

Note 1: Freeway/arterial/sub-arterial roads: $L_{Aeq(15hour)}$ 60dBA(external)
Local roads: $L_{Aeq(1hour)}$ 55dBA (external)
Note 2: Freeway/arterial/sub-arterial roads: $L_{Aeq(9hour)}$ 55dBA(external)
Local roads: $L_{Aeq(1hour)}$ 50dBA (external)

Table 21 demonstrates that construction traffic associated with diversions during construction works is likely to generate road traffic noise impacts at the nearest receivers on each road. It is noted that this diversion would be in place only when construction works are occurring under a rail possession.

This traffic diversion will be included in the Stage B Precinct Traffic Management Plan. Mitigation and management measures to assist in minimising noise impacts from construction traffic are shown in **Section 8.1**.

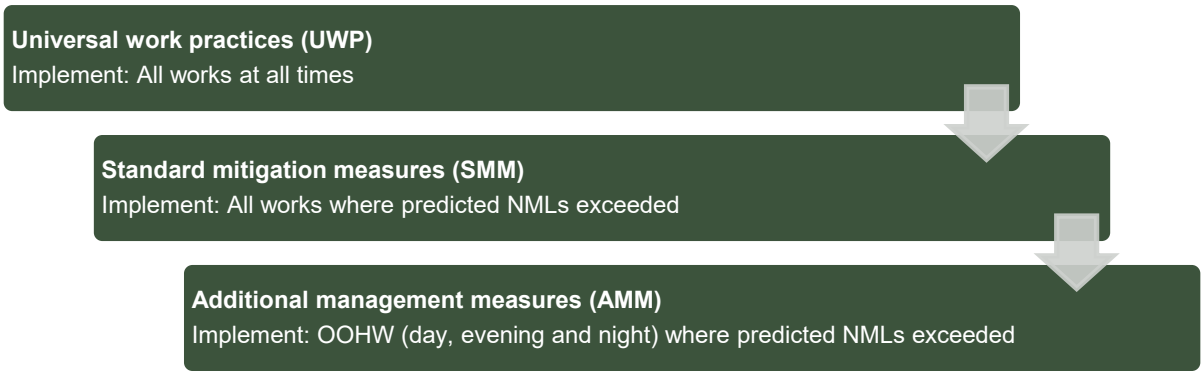

8.0 Mitigation and Management Measures

Noise from the Project may be apparent at the nearest receivers at certain times during the construction of the Project. The Project should apply all feasible and reasonable mitigation measures to minimise the impacts.

In accordance with CoA E74, works that exceed the noise management levels and/or vibration criteria must be managed in accordance with the CNVMP.

The Inland Rail NSW Construction Noise and Vibration Framework (CNVF) has been adopted as a guideline for this project and outlines a hierarchy of work practices and mitigation measures to minimise the impact of construction noise and vibration on the community. This hierarchy is shown in **Figure 7**.

Figure 7 Hierarchy of Work Practices and Mitigation Measures

The universal work practices (UWP) and standard mitigation measures (SMM) for the overall A2I project are outlined in the CNVMP. All mitigation and management measures outlined in the CNVMP will be adopted in accordance with CoA E74. Site specific mitigation measures are outlines below in **Section 8.1**. These measures have been incorporated into the noise modelling assessment to provide mitigated results. Additional Management Measures (AMM) are outlined in **Section 8.3**.

8.1 Site Specific Mitigation Measures

Table 22 outlines the mitigation and management measures that will be adopted to minimise potential noise and vibration impacts associated with this CNVIS at surrounding sensitive receivers. These measures have been considered in noise modelling based on the total scenario sound power levels, refer **Appendix B**.

Table 22 Site Specific Mitigation Measures

Measure	Reference / Notes
Project Planning	
Use quieter and less vibration emitting construction methods where feasible and reasonable.	Best practice
Works will be completed during the approved daytime construction hours where possible, as outlined in **Section 2.2.** Some unavoidable OOHW will be required due to road and rail traffic management restrictions, as outlined in **Section 2.3**.	Best practice CoA E69 CoA E71
Where OOHW is required, an OOHW Permit will be prepared, as required by the OOHW Protocol or EPL.	Best practice CoA E71

Measure	Reference / Notes
Further detail around the specific work tasks, duration and justification of OOHW must be identified in the OOHW permit.	CoA E72 CoA E73
Scheduling	
Highly noise intensive works that result in an exceedance of the applicable NML at the same receiver must only be undertaken: a) Between 08:00am – 06:00pm Monday to Friday; b) Between 08:00am – 01:00pm Saturday; and c) if continuously, then not exceeding three (3) hours, with a minimum cessation of work of not less than one hour. Refer **Section 2.2.1**.	Best practice CoA E70
Noise generating work in the vicinity of community, religious, educational institutions, noise and vibration-sensitive businesses and critical working areas (such as exam halls, theatres, laboratories and operating theatres) resulting in noise levels above the NMLs will not be timetabled during sensitive periods, unless other reasonable arrangements with the affected institutions can be made at no cost to the affected institution. Refer to Community Consultation in **Section 8.5**.	Best practice CoA E76
All work undertaken for the delivery of the project including those undertaken by third parties (such as utility relocations), must be coordinated to ensure respite periods are provided.	Best practice, CoA E83
Site Layout	
Compounds and worksites have been designed to promote one-way traffic and minimise the need for vehicle reversing.	Best practice
Construction activities must be planned to minimise vehicle movements around the Site.	
Work compounds, parking areas, and equipment and material stockpiles would be positioned away from noise-sensitive locations and take advantage of existing screening from local topography.	
Equipment that is noisy would be started away from sensitive receivers where possible / practicable.	
Training	
Training will be provided to all personnel on noise and vibration requirements for the project. Inductions and toolbox talks to be used to inform personnel of the location and sensitivity of surrounding receivers.	Best practice
The induction protocols must include awareness of noise generating activities and mitigation measures and techniques that should be implemented.	
Training must be conducted for appropriate community behaviours when access/egress the Site.	
Plant and Equipment Source Mitigation	
All plant and equipment must be maintained in a proper and efficient condition, operated in a proper and efficient manner, and feature standard noise reduction measures where applicable.	Best practice CNVF
Plant and equipment must be selected that can be fitted with options to minimise noise such as covers, mufflers, shrouds and other noise suppression equipment. Low noise emission plant and equipment must be selected where available. These considerations have been included in noise modelling based on the equipment sound power levels, refer **Appendix B**.	
Non-tonal reversing beepers (or an equivalent mechanism) must be fitted and used on all construction vehicles and mobile plant regularly used on site and for any out-of-hours work, including delivery vehicles.	

Measure	Reference / Notes
Stationary noise sources will be sited behind structures (or temporary screens) that act as barriers, or at the greatest distance from the noise-sensitive area (where practicable). Equipment will be oriented so that noise emissions are directed away from any sensitive areas.	
Noise generating equipment will be regularly checked and effectively maintained, including checking of hatches/enclosures regularly to ensure that seals are in good condition and doors close properly against seals.	
Noise monitoring spot checks of equipment will be completed to ensure individual items are operating as expected	
Dropping materials from a height will be avoided.	
Loading and unloading will be carried out away from noise sensitive areas, where practicable.	
Alternative construction methods have been considered for activities, where possible. Alternative methods will be considered for vibratory rollers (eg smaller sized equipment or static rolling, refer **Section 6.0**). Use of these methods will depend on the specific circumstances and therefore the worst-case scenario is included for the purpose of this CNVIS.	Best practice
Construction Traffic	
Construction traffic routes to site will be limited to major roads where possible.	Best practice
Trucks will not queue outside residential properties.	
Truck drivers will be instructed to avoid compression braking as far as practicable.	
Delivery vehicles should be fitted with straps rather than chains for unloading, wherever possible.	
Truck movements will be kept to a minimum where possible (eg trucks are fully loaded on each trip).	
Notification will be provided to all impacted residences along construction traffic routes (including temporary diversions).	
Screening	
Install purpose-built screening or enclosures around long-term fixed plant that has the potential to impact nearby receivers	Best practice CNVF
The layout of the site will take advantage of existing screening from local topography, where possible. Site huts, maintenance sheds and/or containers will be positioned between noisy equipment and the affected receivers.	
Implementation of temporary noise barriers for highly intensive noise activities, such as saw cutting or rock breaking.	
Community Consultation	
Regular communications on the activities and progress of the proposal shall be provided to the community (eg via newsletter, email and/or website).	Best practice CNVF
A telephone, email and web-based community information service shall be established to allow the community to obtain additional information on construction activities, provide feedback or make a complaint.	Best practice CNVF
Owners and occupiers of properties at risk of exceeding the screening criteria for cosmetic damage (and/or human comfort) must be notified before work that generates vibration commences in the vicinity of those properties. If the potential exceedance is to occur more than once or extend over a period of 24 hours, owners and occupiers are to be provided a schedule of potential exceedances on a monthly basis for the duration of the potential exceedances, unless otherwise agreed by the owner and occupier.	Best practice CoA E79

Measure	Reference / Notes
Personalised communication and respite offers will be provided to all receivers that are predicted to be highly noise affected (HNA), refer **Section 8.3**.	Best practice
Where complaints are received, work practices will be reviewed and feasible and reasonable practices applied to minimise any further impacts.	Best practice
Monitoring	
Noise and/or vibration monitoring will be conducted (as appropriate) when noise/vibration intensive works are being undertaken in close proximity to sensitive receivers.	Best practice CNVF CoA E80 CoA E81
Noise and vibration monitoring will be undertaken in accordance with the CNVMP and Monitoring Program.	
Advice from a heritage specialist must be sought on methods and locations for installing equipment used for vibration, movement and noise monitoring at heritage-listed structures.	
See **Section 8.7** or details of monitoring requirements.	
Vibration	
If vibration generating works are required within the minimum working distances and considered likely to exceed the criteria: • Different construction methods with lower source vibration levels will be investigated and implemented, where feasible (refer **Table 12**). • Attended vibration measurements will be undertaken at the start of the works to determine actual vibration levels of the item. Vibration intensive works will cease if the monitoring indicates vibration levels are likely to, or do, exceed the relevant cosmetic damage criteria. Work methods will be modified prior to recommencing the activity. Note: Where feasible, small vibratory rollers or static rolling will be prioritised to reduce vibration impacts to surrounding receivers.	Best practice CoA E80
Vibration intensive works required within the minimum working distance at the same receiver must only be undertaken: a) Between 08:00am – 06:00pm Monday to Friday; b) Between 08:00am – 01:00pm Saturday; and c) if continuously, then not exceeding three (3) hours, with a minimum cessation of work of not less than one hour. Refer to **Section 2.2.1**.	Best practice CoA E70
Where works are required within the cosmetic damage minimum working distances, building condition surveys will be completed before and after the works to ensure no cosmetic damage has occurred. Condition status of all heritage structures that fall within the unsound heritage minimum working distance for the nominated vibration-intensive equipment should be confirmed prior to the commencement of works.	Best practice CoA C9
Property damage caused directly or indirectly (for example from vibration or from groundwater change) by the construction or operation must be rectified at no cost to the owner. Alternatively, compensation may be provided for the property damage as agreed with the property owner.	Best practice CoA E122

8.2 Respite

In accordance with CoA E70, except as permitted by an EPL, highly noise intensive works that result in an exceedance of the applicable NML at the same receiver must only be undertaken:

a) Between 08:00am – 06:00pm Monday to Friday;

b) Between 08:00am – 01:00pm Saturday; and

c) if continuously, then not exceeding three (3) hours, with a minimum cessation of work of not less than one hour.

For the purposes of this condition, 'continuously' includes any period during which there is less than one hour between ceasing and recommencing any of the work.

In accordance with CoA E72 and E83, the procedure outlined in the OOHW Protocol must be implemented to coordinate OOHW (including those approved by an EPL or undertaken by a third party), to ensure appropriate respite is provided. This coordination must include:

a) rescheduling work to provide respite to impacted noise sensitive land use(s) so that the respite is achieved; or

b) the provision of alternative respite or mitigation to impacted noise sensitive land use(s); and

c) the provision of documentary evidence to the AA in support of any decision made in relation to respite or mitigation.

The consideration of respite must also include all other CSSI, SSI and SSD projects which may cause cumulative and/or consecutive impacts at receivers affected by the delivery of the CSSI.

Highly noise intensive works (as defined in **Section 2.2.1**) are required in various work scenarios. As outlined above, highly noise intensive work that results in an exceedance of the applicable NML is restricted to the hours shown above and must have respite periods as defined above.

CoA E70 applies to the following work scenarios where highly noise intensive works are proposed and the NML is predicted to be exceeded:

- W.005 - Track Work - Peak
- W.007 - Track Tamping

In accordance with CoA E71, all scenarios listed above require approval through the OOHW Protocol or and EPL to occur outside the hours listed above from CoA E70.

Respite offers are also required as part of the additional mitigation measured outlined in **Section 8.3**.

8.3 Additional Mitigation and Management Measures for Out of Hours Work

Where the 'mitigated' construction noise levels remain above the NMLs, the Additional Mitigation Measures Matrix (AMMM) adapted from in the CNVF and CNVMP is to be implemented. The approach, guided by the AMMM, is primarily aimed at pro-active engagement with affected sensitive receptors rather than additional noise reducing mitigation. OOHW has been divided into three periods (Day, Evening and Night) as adapted from the CNVF around the approved project hours (CoA E69).

Additional mitigation measures described in the CNVMP are listed in **Table 23**. The additional mitigation measures to be adopted for airborne noise are identified in **Table 24**.. The additional mitigation measures for construction vibration are identified in **Table 25**.

Table 23 Additional Mitigation Measures

Mitigation/Management Measure	Abbreviation
Communication (Category 1)[1]	CO1
Communication (Category 2)[2]	CO2
Respite Offer[3]	RO
Alternative Accommodation	AltA
Agreement with Owners	AO

Note 1: As outlined in the CNVF, Communication to provide information on the OOHW via methods such as letter box drop, email, newsletter, media advertisements and/ or website prior to the works commencing.

Note 2: As outlined in the CNVF, Communication should be personalised (e.g. door knock, meeting, telephone call). Contact with these residents should commence early to enable feedback to be considered by the proposal.

As outlined in the CNVF, Respite Offers are not applicable to non-residential receivers.

Note 3: As outlined in the CNVF, RO are not applicable to non-residential receivers. RO may comprise of pre-purchased movie tickets, dinner vouchers or similar. RO can also be provided by limiting high noise generating works and allowing at least a one-hour respite period between blocks of work. Where possible, the timing of this respite should be discussed with the impacted community.

Table 24 Airborne Noise – Additional Mitigation Measures Matrix

Time Period		Exceedance of NML	Perception	Duration	Communication Category/ Management Measure
OOHW Daytime Period	Sunday 8am – 6pm (including public holidays)	<5	Noticeable	Any	CO1
		5-15	Clearly audible	Any	CO1
		16-25	Moderately intrusive	Any	CO1, CO2
		>25	Highly intrusive	Any	CO1, CO2
OOHW Evening Period	Monday – Sunday 6pm – 10pm (including public holidays)	<5	Noticeable	Any	CO1
		5-15	Clearly audible	Any	CO1
		16-25	Moderately intrusive	Any	CO1, CO2
		>25	Highly intrusive	Any	CO1, CO2
				>2 consecutive rest periods[1]	CO1, CO2, RO
OOHW Night Period	Monday – Saturday 10pm – 7am Sunday 10pm – 8am (including public holidays)	<5	Noticeable	Any	CO1
		5-15	Clearly audible	Any	CO1
		16-25	Moderately intrusive	Any	CO1, CO2
				>2 consecutive sleep periods[1]	CO1, CO2, RO,AO
		>25	Highly intrusive	Any	CO1, CO2, RO
				>2 consecutive sleep periods[1]	CO1, CO2, RO, AO, AltA

Note 1: Where the duration exceeds 2 consecutive rest/sleep periods, the corresponding additional mitigation measures will be provided for all periods where construction exceedances are expected to occur.

Table 25 Vibration – Additional Mitigation Measures Matrix

Time Period		Duration	Exceedance of 'preferred' value	Exceedance of 'maximum' value
OOHW Daytime Period	Sunday 8am – 6pm (including public holidays)	Any	CO1, CO2	CO1, CO2, RO
OOHW Evening Period	Monday – Sunday 6pm – 10pm (including public holidays)	Any	CO1, CO2	CO1, CO2, RO
OOHW Night Period	Monday – Saturday 10pm – 7am Sunday 10pm – 8am (including public holidays)	Any	CO1, CO2, RO	CO1,CO2, RO, AltA

8.3.1 Receivers Eligible for Additional Mitigation Measures - Noise

The receivers eligible for additional mitigation and management measures due to construction noise from the project work are presented in **Appendix C** and **Appendix D**. Where work occurs for greater than two consecutive evening or nights, receivers may be eligible for respite offers (RO), agreements with owners (AO) or alternative accommodation (AltA) depending on the exceedance level and works period as detailed in **Table 24**.

As outlined in **Section 5.2**, 'highly intrusive' impacts at nearest residential receivers are predicted for all work scenarios due to the proximity to the work. The addresses of the 'highly intrusive' impacted receivers are provided in **Appendix D**.

The work scenarios that are scheduled for OOHW evening and night-time work i.e. scenarios *W.002* and *W.005* to *W.008*, are predicted to create highly intrusive noise levels at residential receivers. Should these works occur for more than two consecutive sleep periods in a row, additional mitigation measures must be provided to affected sensitive receivers as detailed in **Table 24**.

Where possible, work would be scheduled to avoid impacting the same receivers for more than two consecutive sleep periods. Receivers that would be impacted for more than two consecutive sleep periods must be identified in the OOHW permit.

8.3.2 Receivers Eligible for Additional Mitigation Measures - Vibration

As defined in **Section 2.2.1** and **Section 8.2** activities involving high noise generating equipment, such as rock hammering or vibratory rolling, are limited to specific daytime construction hours only. Respite periods of 1 hour after every 3 hours of high noise/vibration generating work are also required.

Construction vibration mitigation and management measures are discussed in **Section 8.0**. Any proposed works outside of the approved daytime hours will need to be assessed as part of the OOHW permit preparation discussed in **Section 2.4**. Any additional mitigation (from **Table 23**) for vibration activities must be identified in the OOHW permit.

8.4 Community Notification

As detailed in the standard management measures outlined in the CNVF:

- A telephone, email and web-based community information service will be established to allow the community to obtain additional information on construction activities, provide feedback or make a complaint.
- Regular communications on the activities and progress of the proposal shall be provided to the community (e.g. via newsletter, email and/or website).

8.5 Consultation with Affected Receivers

In accordance with CoA E78, the CNVIS must include specific mitigation measures identified through consultation with affected sensitive land user(s) and the mitigation measures must be implemented for the duration of the Work. Details of this consultation are provided below.

8.5.1 Consultation approach

This section discusses the consultation approach that has been undertaken for the purposes of the work subject to this CNVIS. It is noted that consultation with affected sensitive land users on what specific mitigation measures they may require is considered to be an ongoing and live process and as such, measures that are personal to individual affected sensitive

land user(s) will not be regularly documented in this CNVIS. Consultation records will be made available to the AA upon request.

The purpose of this consultation is to identify receivers who have specific circumstances that need further consideration during construction – for example, households who have children undertaking exams (HSC or similar), households who have vulnerable persons with disabilities or medical conditions, shift workers, etc.

The consultation approach utilised by Martinus Rail is in accordance with the Community Communications Strategy (CCS). The approach involved directly contacting the affected sensitive land user identified by this CNVIS through one or more of the following methods:

- Surveys distributed by email and paper notifications
- Door-knocks with a ‘Sorry we missed you’ card for those who were not at home
- Notifications
- Phone calls
- Emails
- Community briefings / group meetings.

Affected sensitive land users contacted by Martinus Rail have been made aware of the anticipated duration and nature of construction works that may affect them, as well as mitigation measures that will be implemented in accordance with the CEMP and CNVMP. Contact information for Martinus Rail’s Community Team have been provided to assist with ongoing consultation during construction.

Depending on individual needs and circumstances, specific mitigation measures offered by Martinus Rail could include but are not limited to:

- Offers of individually agreed respite to highly noise affected sensitive land users (standard construction hours)
- Consultation on timetabling of highly noise intensive works to avoid sensitive periods
- Offers of attended noise monitoring at the premises to confirm actual levels of impact
- Offers of temporary alternative accommodation or work space
- Individual briefings.

Specific mitigation measures identified in consultation with individual affected sensitive land users will be implemented during works subject to this CNVIS. Further mitigation measures may be identified by the affected community as construction progresses and these will be assessed where reasonable and feasible and on a case by-case basis.

8.5.2 Consultation for this CNVIS

The project website includes the following key information:

- Latest approvals
- All management plans, including the CNVMP and the Construction Environmental Management Plan (CEMP), which provide information on the relevant environmental management measures
- Notifications, including three-month lookaheads, monthly updates and specific OOHW notifications

- Contact mechanisms, including requests for feedback and/or complaints on individual circumstances.

As part of the project's program of regular notifications, the following notifications have included information on the OOHW requirements subject to this CNVIS:

- Project-wide monthly notifications distributed to over 25,000 properties
- Work specific notifications
- Three-month lookahead notifications distributed to over 25,000 properties
- Regular email with details of upcoming work or changes.

All notifications include the following:

- Link to project website
- 24/7 phone number and email address for enquiries, complaints or comments
- Requests for the community to provide feedback on their individual needs and circumstances.

Prior to commencement of works subject to this CNVIS, targeted consultation occurred with a total of approximately 7,127 residential properties across the entire project alignment, approximately 420 of which were in Junee. These properties received targeted letterbox drops, emails and newspaper adverts from the Community Team and feedback was sought across (3) three weeks, from 7 August to 28 August 2024.

The team requested feedback from the affected community on their individual needs during this targeted consultation.

8.5.3 Consultation outcomes

Feedback received during this consultation was primarily related to the existing operational train line and the disturbance the trains cause.

In Junee, no additional management measures relating to construction noise were identified during this consultation; however, the following general sentiments were noted from respondents:

- Limit noise generating work outside of standard construction hours as much as possible
- Limit noise generating work on the weekends as much as possible
- Construction works should be completed as soon as possible.
- Minimise works between the period of 10pm – 7am. Currently, this period is outside of the standard work hours defined in the CoA. Any out of hours work will need to be assessed in accordance with **Section 2.4**.

The CNVIS documents the need to limit noise generating work as much as possible and this will be achieved through the implementation of existing mitigation measures listed in this CNVIS.

Nevertheless, regular consultation with the community will continue throughout construction in accordance with the Community Communications Strategy and the Community Action Plan prepared for the relevant activities. A list of key stakeholders relevant to this CNVIS are included in **Table 26** below.

Table 26 Key Stakeholders for this CNVIS

Precinct Area	Receiver Type	Level of Engagement	Distance from Work Site (m)
Olympic Highway Underbridge			
Junee North Public School	Educational	Consult	135
Junee Baptist Church	Place of Worship	Consult	70
Olympic Highway, Illabo Road and Knight, Prince, Marquis, Regent, Gloucester, Lord and Castle Streets	Residential	Consult	Various
Ridge, Main, Lillian, Cedric, Cross, Florence, Elizabeth, Pirr and Orr Streets	Residential	Consult	Various
Olympic Highway, Broadway, Queen Street and Lord Street (traffic diversion route)	Residential	Consult	Various

8.6 Occupational Noise Exposure

In accordance with CoA E77, worksites will be managed to ensure that noise generated by construction will not exceed the National Standard for exposure to noise in the occupational environment of an eight-hour equivalent continuous A-weighted sound pressure level of $L_{Aeq,8h}$ of 85 dBA for any employee working at a location near the project.

It is not anticipated that an exceedance will occur at any point during the project, however occupational exposure to noise will primarily be managed under the Work Health and Safety Management Plan.

8.7 Monitoring

Noise and vibration monitoring will be undertaken in accordance with the CNVMP (including monitoring program) and the CNVF.

Construction Noise Monitoring

Construction noise monitoring will be carried out at the commencement of activities to confirm that actual noise levels are consistent with the predictions presented in this CNVIS, and that the management measures that have been implemented are effective or as per the CNVMP.

Monitoring locations will be focused to the most impacted receivers identified in **Appendix C**. Indicative locations are identified in **Table 27**, however, these will be subject to provision of safe access and the specific location of work being undertaken at the time of monitoring.

Noise monitoring will, where practicable, be in a position with unobstructed views of general site activities, whilst shielded as much as possible from non-construction site noise (e.g. road traffic, rail noise and other surrounding noise). The preferred measurement height is 1.2-1.5m above the ground. In accordance with *Australian Standard AS1055:2018*, outdoor noise monitoring is to be undertaken at least 3.5m from any reflecting structure other than the ground.

Noise monitoring will be carried out on or near the property boundary at the locations representative of the nominated receivers in **Table 27** (i.e. in publicly accessible areas near the nominated receivers, if it is safe to do so). Noise monitoring results will be assessed against the noise management levels (NMLs) and predicted exceedance category identified in **Appendix C**.

The results will be documented with discussion about the details of work underway at the time and mitigation in place. Noise monitoring results will be recorded on the MR Noise Monitoring Form in Procore. Noise monitoring data will be made available to the AA and ER for information, upon request.

Construction Vibration Monitoring

Attended or unattended vibration monitoring will be undertaken as required. Monitoring locations may vary as work progresses and will be determined on a case-by-case basis or in response to complaints. The focus of monitoring will be at risk buildings, structures and sensitive receivers as identified in **Section 6.0**. If other vibration intensive activities are required, an assessment of their potential impact is required as per the CNVMP.

Indicative locations are identified in **Table 27**, however, these will be subject to provision of safe access and the specific location of work being undertaken at the time of monitoring. Vibration monitoring data will be made available to the AA and ER for information, upon request.

Table 27 Indicative Monitoring Locations

Location	Type	Monitoring	Timing
Noise Monitoring			
Northern Work Areas • 10 Waterworks Road, Junee • 21 Illabo Road, Junee **Central Work Areas** • 76 Main Street, Junee • 20 Regent Street, Junee	Activities based noise monitoring	• Confirming that actual noise levels are consistent with predicted noise impacts and that the effectiveness of actions and mitigation measures implemented are satisfactory, • In response to a noise related complaint(s) (determined on a case-by-case basis) • Following implementation of mitigation measures or noise attenuation because of exceedance of predicted noise levels	At the commencement of the activities being undertaken
Southern Work Areas • 132 Main Street, Junee • 2 Castle Street, Junee • 2 Crawley Street, Junee	Out of Hours Work	Attended monitoring as required by the Out of Hours Work (OOHW) plan to validate noise levels are consistent with predicted noise impacts and that the effectiveness of actions and mitigation measures implemented are satisfactory	At the commencement of the range of OOHW activities being undertaken.
	Plant / Equipment Checks	Spot checks would be carried out as required on a case-by-case basis, such as • In response to a specific noise related complaint and • During noise verification monitoring when it is possible to isolate the noise from one piece of plant or equipment.	case-by-case basis
Vibration Monitoring			
• 2 Castle Street, Junee • 132 Main Street, Junee	Activities based vibration monitoring	• Confirming that vibration levels are below criteria and that the effectiveness of actions and mitigation measures implemented are satisfactory • In response to a vibration related complaint(s) (determined on a case-by-case basis).	Throughout vibration generating activities being undertaken within minimum working distances to nearby receivers.

9.0 Cumulative Impacts

Cumulative construction noise impacts can occur where multiple work activities are being completed near to a particular receiver at the same time. There is potential for cumulative construction impacts from multiple construction activities being completed in different areas of the project.

Since the construction scenarios required for various stages of the project would generally require similar items of equipment, concurrent construction work being completed near to a particular area could theoretically increase the worst-case noise levels in this report by around 3 dB (ie a logarithmic adding of two sources of noise at the same level).

The likelihood of worst-case noise levels being generated by two different work activities at the same time is, however, considered low and rather than increase construction noise levels, the impact of concurrent work would generally be a limited to a potential increase in the duration, and annoyance, of noise impacts on the affected receivers.

In practice, construction noise levels in any one location would vary and would be frequently much lower than the worst-case scenario assessed due to construction staging moving work around within the study area and, in many cases, only a few items of equipment being used at any one time.

Martinus Rail will take feasible and reasonable steps to consult and coordinate with other construction projects when they become aware of them and if they have the potential to impact the same receivers concurrently, to minimise cumulative impacts of noise and vibration and maximise respite for affected sensitive receivers (in accordance with CoA E72 and E83).

Construction Noise and Vibration Impact Statement

Martinus Rail

SLR Project No.: 610.031317.00001

31 July 2025

Doc No:
6-0052-210-EEC-J6-AS-0001_1

1. Sound Level or Noise Level

The terms 'sound' and 'noise' are almost interchangeable, except that 'noise' often refers to unwanted sound.

Sound (or noise) consists of minute fluctuations in atmospheric pressure. The human ear responds to changes in sound pressure over a very wide range with the loudest sound pressure to which the human ear can respond being ten million times greater than the softest. The decibel (abbreviated as dB) scale reduces this ratio to a more manageable size by the use of logarithms.

The symbols SPL, L or LP are commonly used to represent Sound Pressure Level. The symbol LA represents A-weighted Sound Pressure Level. The standard reference unit for Sound Pressure Levels expressed in decibels is 2×10^{-5} Pa.

2. 'A' Weighted Sound Pressure Level

The overall level of a sound is usually expressed in terms of dBA, which is measured using a sound level meter with an 'A-weighting' filter. This is an electronic filter having a frequency response corresponding approximately to that of human hearing.

People's hearing is most sensitive to sounds at mid frequencies (500 Hz to 4,000 Hz), and less sensitive at lower and higher frequencies. Different sources having the same dBA level generally sound about equally loud.

A change of 1 dB or 2 dB in the level of a sound is difficult for most people to detect, whilst a 3 dB to 5 dB change corresponds to a small but noticeable change in loudness. A 10 dB change corresponds to an approximate doubling or halving in loudness. The table below lists examples of typical noise levels.

Sound Pressure Level (dBA)	Typical Source	Subjective Evaluation
130	Threshold of pain	Intolerable
120	Heavy rock concert	Extremely noisy
110	Grinding on steel	
100	Loud car horn at 3 m	Very noisy
90	Construction site with pneumatic hammering	
80	Kerbside of busy street	Loud
70	Loud radio or television	
60	Department store	Moderate to quiet
50	General Office	
40	Inside private office	Quiet to very quiet
30	Inside bedroom	
20	Recording studio	Almost silent

Other weightings (eg B, C and D) are less commonly used than A-weighting. Sound Levels measured without any weighting are referred to as 'linear', and the units are expressed as dB(lin) or dB.

3. Sound Power Level

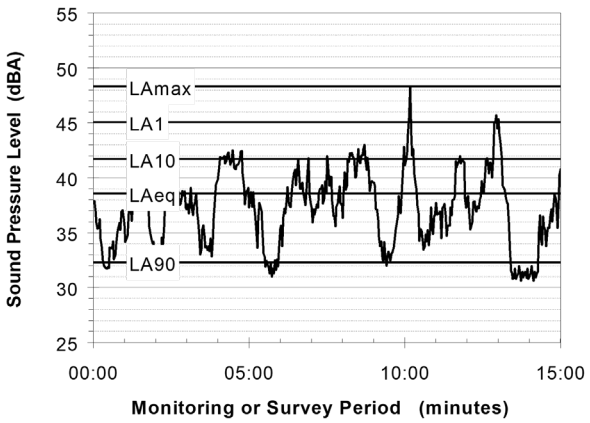

The Sound Power of a source is the rate at which it emits acoustic energy. As with Sound Pressure Levels, Sound Power Levels are expressed in decibel units (dB or dBA), but may be identified by the symbols SWL or LW, or by the reference unit 10^{-12} W.

The relationship between Sound Power and Sound Pressure is similar to the effect of an electric radiator, which is characterised by a power rating but has an effect on the surrounding environment that can be measured in terms of a different parameter, temperature.

4. Statistical Noise Levels

Sounds that vary in level over time, such as road traffic noise and most community noise, are commonly described in terms of the statistical exceedance levels L_{AN}, where L_{AN} is the A-weighted sound pressure level exceeded for N% of a given measurement period. For example, the L_{A1} is the noise level exceeded for 1% of the time, L_{A10} the noise exceeded for 10% of the time, and so on.

The following figure presents a hypothetical 15 minute noise survey, illustrating various common statistical indices of interest.

Of particular relevance, are:

L_{A1} The noise level exceeded for 1% of the 15 minute interval.

L_{A10} The noise level exceeded for 10% of the 15 minute interval. This is commonly referred to as the average maximum noise level.

L_{A90} The noise level exceeded for 90% of the sample period. This noise level is described as the average minimum background sound level (in the absence of the source under consideration), or simply the background level.

L_{Aeq} The A-weighted equivalent noise level (basically, the average noise level). It is defined as the steady sound level that contains the same amount of acoustical energy as the corresponding time-varying sound.

L_{Amax} The A-weighted maximum sound pressure level of an event measured with a sound level meter.

5. Frequency Analysis

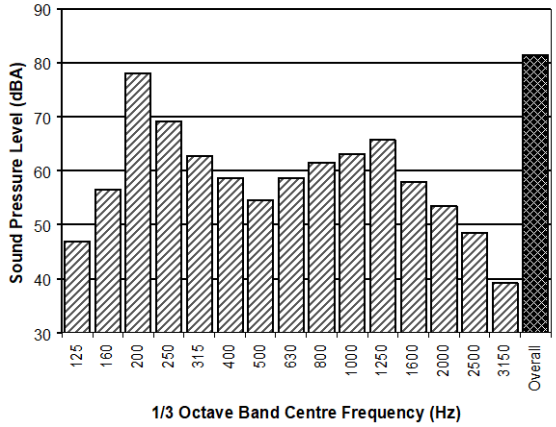

Frequency analysis is the process used to examine the tones (or frequency components) which make up the overall noise or vibration signal.

The units for frequency are Hertz (Hz), which represent the number of cycles per second.

Frequency analysis can be in:

- Octave bands (where the centre frequency and width of each band is double the previous band)
- 1/3 octave bands (three bands in each octave band)
- Narrow band (where the spectrum is divided into 400 or more bands of equal width)

The following figure shows a 1/3 octave band frequency analysis where the noise is dominated by the 200 Hz band. Note that the indicated level of each individual band is less than the overall level, which is the logarithmic sum of the bands.

6. Annoying Noise (Special Audible Characteristics)

A louder noise will generally be more annoying to nearby receivers than a quieter one. However, noise is often also found to be more annoying and result in larger impacts where the following characteristics are apparent:

- **Tonality** - tonal noise contains one or more prominent tones (ie differences in distinct frequency components between adjoining octave or 1/3 octave bands), and is normally regarded as more annoying than 'broad band' noise.
- **Impulsiveness** - an impulsive noise is characterised by one or more short sharp peaks in the time domain, such as occurs during hammering.
- **Intermittency** - intermittent noise varies in level with the change in level being clearly audible. An example would include mechanical plant cycling on and off.
- **Low Frequency Noise** - low frequency noise contains significant energy in the lower frequency bands, which are typically taken to be in the 10 to 160 Hz region.

7. Vibration

Vibration may be defined as cyclic or transient motion. This motion can be measured in terms of its displacement, velocity or acceleration. Most assessments of human response to vibration or the risk of damage to buildings use measurements of vibration velocity. These may be expressed in terms of 'peak' velocity or 'rms' velocity.

The former is the maximum instantaneous velocity, without any averaging, and is sometimes referred to as 'peak particle velocity', or PPV. The latter incorporates 'root mean squared' averaging over some defined time period.

Vibration measurements may be carried out in a single axis or alternatively as triaxial measurements (ie vertical, longitudinal and transverse).

The common units for velocity are millimetres per second (mm/s). As with noise, decibel units can also be used, in which case the reference level should always be stated. A vibration level V, expressed in mm/s can be converted to decibels by the formula 20 log (V/Vo), where Vo is the reference level (10^{-9} m/s). Care is required in this regard, as other reference levels may be used.

8. Human Perception of Vibration

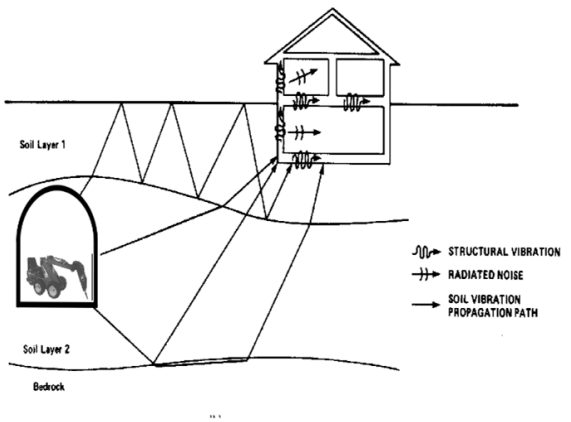

People are able to 'feel' vibration at levels lower than those required to cause even superficial damage to the most susceptible classes of building (even though they may not be disturbed by the motion). An individual's perception of motion or response to vibration depends very strongly on previous experience and expectations, and on other connotations associated with the perceived source of the vibration. For example, the vibration that a person responds to as 'normal' in a car, bus or train is considerably higher than what is perceived as 'normal' in a shop, office or dwelling.

9. Ground-borne Noise, Structure-borne Noise and Regenerated Noise

Noise that propagates through a structure as vibration and is radiated by vibrating wall and floor surfaces is termed 'structure-borne noise', 'ground-borne noise' or 'regenerated noise'. This noise originates as vibration and propagates between the source and receiver through the ground and/or building structural elements, rather than through the air.

Typical sources of ground-borne or structure-borne noise include tunnelling works, underground railways, excavation plant (eg rockbreakers), and building services plant (eg fans, compressors and generators).

The following figure presents an example of the various paths by which vibration and ground-borne noise may be transmitted between a source and receiver for construction activities occurring within a tunnel.

The term 'regenerated noise' is also used in other instances where energy is converted to noise away from the primary source. One example would be a fan blowing air through a discharge grill. The fan is the energy source and primary noise source. Additional noise may be created by the aerodynamic effect of the discharge grill in the airstream. This secondary noise is referred to as regenerated noise.

1 INTRODUCTION

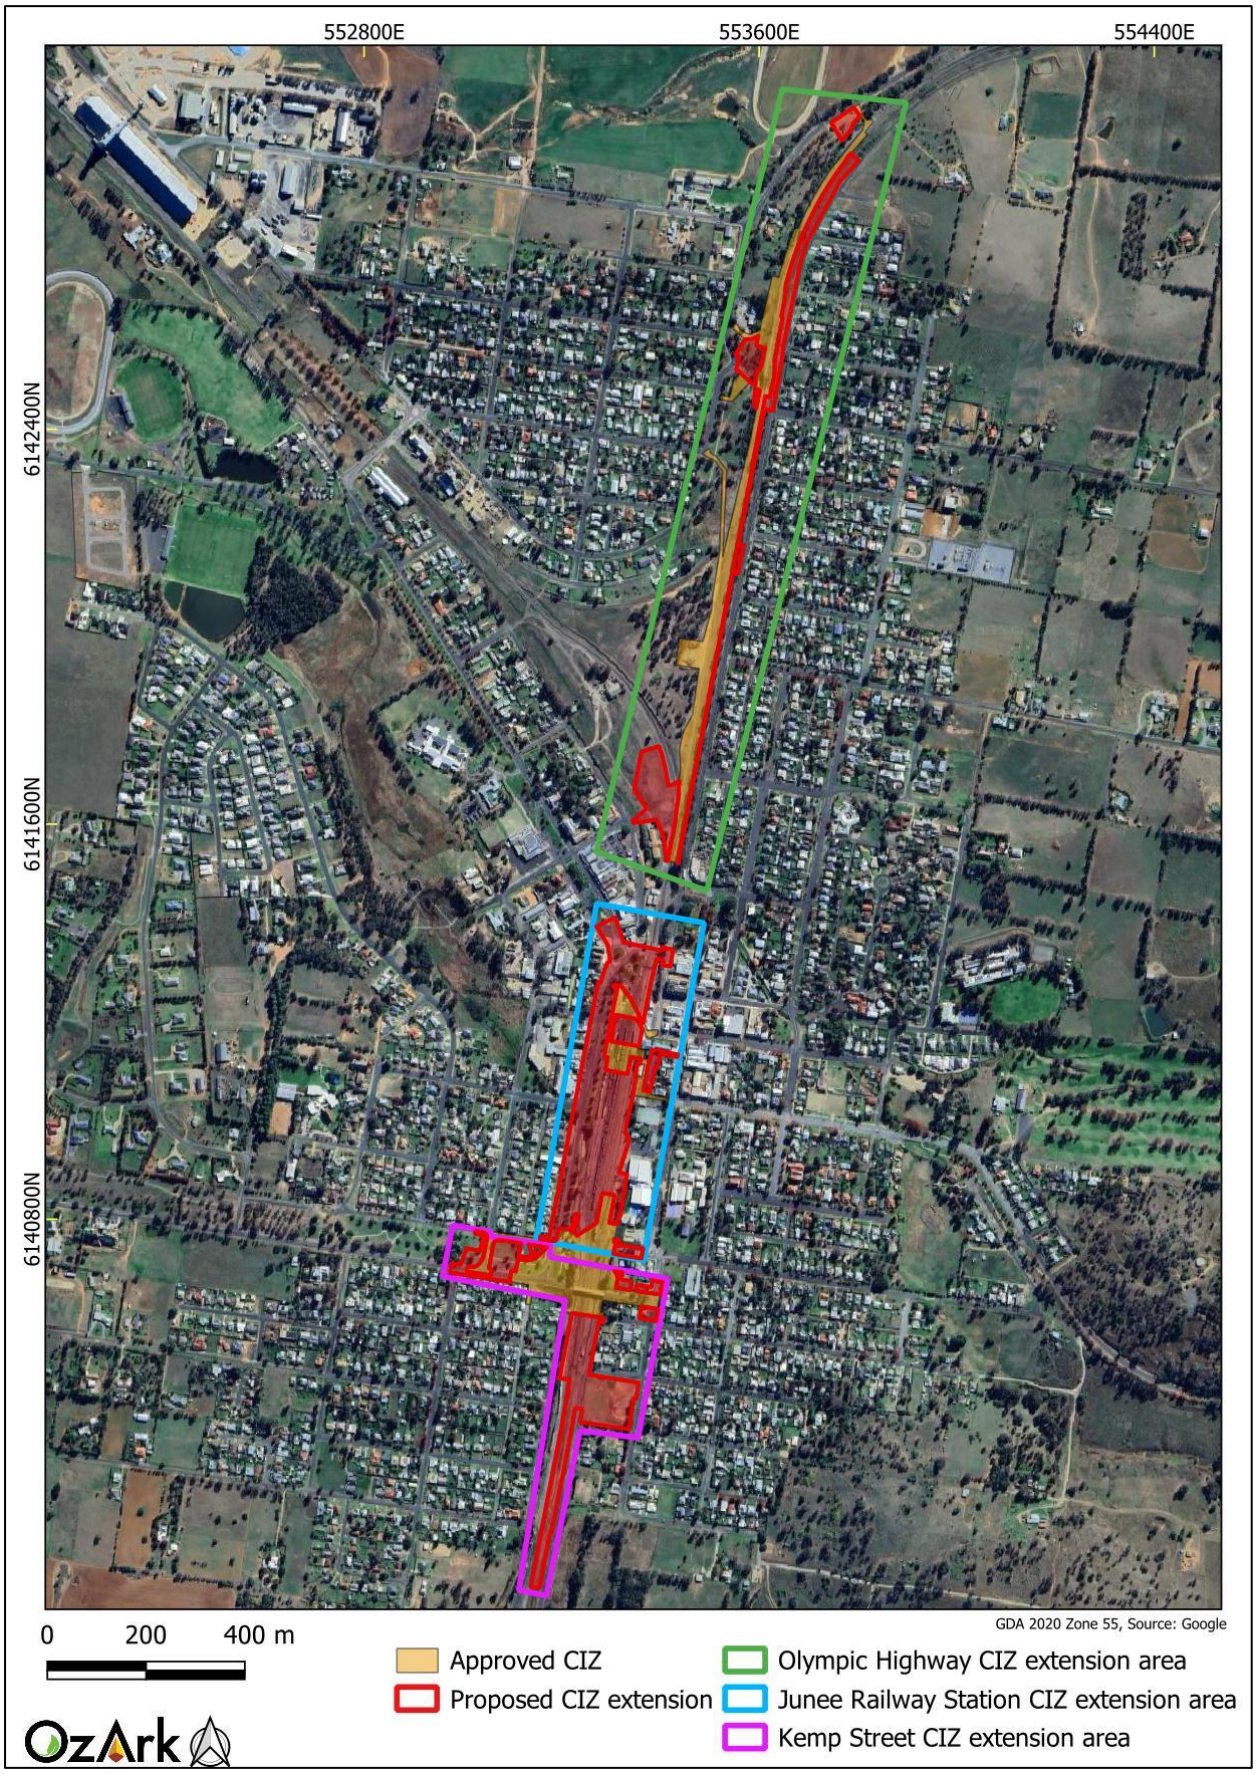

OzArk Environment & Heritage (OzArk) has been engaged by Martinus Rail (MR, the client), on behalf of Australian Rail Track Corporation (ARTC, the proponent), to complete a Aboriginal and non-Aboriginal Heritage Assessment following a revision to the scope of works at three locations that are part of the Albury to Illabo (A2I) Inland Rail (IR) Project (the Project) (**Figure 1-1**). These locations, that shall henceforth be referred to collectively as the Construction Impact Zone (CIZ) extension are within the Junee Shire Local Government Area. The three locations are individually referred to as:

- Olympic Highway, Junee
- Junee Railway Station, Junee
- Kemp Street area, Junee.

The A2I section of the Project is Critical State Significant Infrastructure (CSSI) and was approved on 8th October 2024 (Infrastructure Approval). The approval covered all works proposed within the CIZ. As a result of the need to relocate utilities, alter signalling and provide for sufficient space for effective construction in the Junee area, a CIZ extension has been proposed, the potential heritage impacts of which are addressed in this report. This additional assessment informs a Consistency Assessment for the CIZ extension.

OzArk has prepared this Heritage Memorandum of Findings with reference to the *Due Diligence Code of Practice for the Protection of Aboriginal Objects in NSW* (Due Diligence Code), Heritage Council's *Investigating Heritage Significance, A guide to identifying and examining heritage items in NSW* and the *Historical Archaeology Code of Practice* to assess whether Aboriginal objects or items of historic significance may be harmed by the proposed CIZ extension.

Figure 1-1: Proposed CIZ extension, broken into the three separate assessmetn areas

1.1 PREVIOUS HERITAGE ASSESSMENTS

In 2022, GML Heritage (GML) prepared a *Statement of Heritage Impact* and an *Aboriginal Cultural Heritage Assessment Report* for the Albury to Illabo (A2I) section of the Inland Rail project to enable the required modification of the existing track and associated overhead structures to a sufficient height and width to support the safe running of double-stacked freight trains.

The GML studies assessed both direct heritage impacts within the approved CIZ boundary and indirect impacts to listed historic heritage and Aboriginal sites located adjacent to and within 200 metres (m) of the CIZ boundary. As the assessment beyond the approved CIZ boundary was in relation to indirect impacts (e.g. vibration, viewsheds and vistas, and curtilages) and not direct impacts as may occur within an extension to the CIZ, it was concluded that additional assessment was required to ensure that the provisions of the Infrastructure Approval could be met in relation to the proposed CIZ extension at Junee.

As per Condition of Approval (CoA) A15 for the A2I project, ancillary facilities not specifically listed in the A2I Environmental Impact Statement (EIS) and associated documentation (as listed in CoA A1) can be established, as long as "they have no impacts on heritage items (including areas of archaeological sensitivity)" (A15(c)). The following memo will assess whether CoA A15 can be met in terms of the proposed CIZ extension at Junee, which is to enable the proposed works outlined below.

1.2 PROPOSED WORKS – CIZ EXTENSION ZONES

The extension of the CIZ at Junee is to enable Martinus Rail to undertake various signalling and pre-construction activities beyond the existing approved CIZ. This greater area is required to enable the approved construction activities outlined within the project EIS. It is understood that these proposed works will not disturb the ground (i.e. require excavation) and that Martinus require the use of additional areas primarily for access, temporary material laydown and stockpiling, site compounds.

The proposed works are summarised below, and the zoned areas of work are shown in **Figure 1-1**

- Olympic Highway north (Figure 1-2 and Figure 1-3)
    - Stockpiling and material laydown areas
    - Road closures and traffic management
    - Access points and access tracks
    - Additional area to allow for abutment works to be completed.
- Junee Railway Station (Figure 1-4 and Figure 1-5)

  - Stockpiling and material laydown areas
  - Road closures and traffic management on public roads
  - Access points and access tracks
  - Widening of CIZ to allow for movement to complete approved construction works previously assessed.

- Kemp Street (Figure 1-5)
  - Erection of temporary compound at Endeavour Park
  - Erection of a temporary eastern satellite compound including parking area
  - Stockpiling and material laydown areas
  - Installation of driver platforms
  - Widening of CIZ to allow for movement to complete approved construction works previously assessed.

Following consultation between OzArk and Martinus, the CIZ extension was reduced in some areas, particularly within the Olympic Highway CIZ extension zone to exclude elements with potential heritage value through association with the Junee Railway Station and Yard. This report discusses the revised CIZ extension and does not include the excluded areas.

2 ABORIGINAL HERITAGE

2.1 AHIMS SEARCH

On 10 July 2025, a basic search of the Aboriginal Heritage Information Management System (AHIMS) was undertaken over the CIZ extension zones (GDA, Zone: 55, Eastings: 552753–554019, Northings: 6140019– 6143153) (**Appendix 1**). One isolated find site (A2I-2 Junee IF [50-5-0292]) was located within the search area, approximately 7 metres (m) southeast of the approved CIZ and 16 m southwest of the CIZ extension at their closest respective points (**Figure 2-1**). This artefact was recorded as part of the original assessment undertaken for the A2I project.

There are no other sources of information to indicate that Aboriginal objects are likely within the collective CIZ extension proposed for Junee.

2.2 LANDFORM

The CIZ extension is located within the developed centre of Junee, which is largely situated within an undulating plain landform. The study area slopes north to south between elevations of 320 m to 298 m above sea level Australian Height Datum.

Three unnamed ephemeral watercourses transect the CIZ extension but are not considered to been reliable enough water sources to have supported Aboriginal occupation. The closest named watercourse is Butlers Gully, located 232 m south of the study area at its closest point. The more reliable Houlaghans Creek is approximately 6.3 km west of the CIZ extension.

Figure 2-1: Previously recorded sites near to the CIZ extension.

2.3 VISUAL INSPECTION

A visual inspection of the CIZ extension was completed by Dr Jodie Benton on Wednesday 18 June 2025. No Registered Aboriginal Party representatives attended.

The CIZ extension over all three sub-areas was noted to be heavily disturbed by the construction of Junee and various elements of railway or road infrastructure. In areas that were not completely urban / hardstand, vegetation was predominantly cleared with some introduced semi-mature plantings present along roads. Low grasses across the CIZ extension allowed for good ground visibility where exposures were present, typically in areas of poor drainage and vehicle tracks (**Figure 2-2**).

The subsurface archaeological potential of the CIZ extension zones was determined as low due to this disturbance.

2.3.1 Isolated find A2I-2 Junee IF

Visual inspection of the registered location of isolated find A2I-2 Junee IF (50-5-0292) was completed to ground truth the condition and location of the site in proximity to the CIZ extension.

All efforts were made to locate the recorded object however the object could not be identified at the time of inspection, despite the good ground surface visibility. **Figure 2-3** shows the site location during the inspection with the white points marking a 4 x 4 m area around the site centroid (white 'X'), which will be fenced using hi-vis bunting as per mitigation measure AH-3 and Section 6.1.1 of the Construction Cultural Heritage Management Plan (CCHMP) – Stage B.

It was confirmed that the location of isolated find A2I-2 Junee IF is not located within the CIZ extension.

Figure 2-2: View of the CIZ extension at the time of inspection.

1. View across the CIZ extension, proposed lay down area, south end of Kemp Street

2. View across the CIZ extension. Proposed compound area.

Figure 2-3: View of the location of A2-2 Junee IF during the visual inspection.

2.4 CONCLUSION – ABORIGINAL HERITAGE

Application of assessment for Aboriginal heritage via the Due Diligence Code has determined that the proposed CIZ extension is unlikely to harm Aboriginal objects or landscape features with archaeological sensitivity (see **Table 2-1**).

No previously unidentified Aboriginal sites were recorded, and it was determined that due to the significant land use disturbance, there is a low likelihood of intact, subsurface archaeological deposits. As documented in **Table 2-1**, no further archaeological investigation is required.

The works may proceed with caution and in the unlikely event that Aboriginal objects are encountered, refer to the Cultural Heritage Unexpected Find Procedure in Appendix B of the *Inland Rail A2P Albury to Illabo Construction Cultural Heritage Management Plan.*

Table 2-1: Due Diligence Code of Practice application

Step	Reasoning	Answer
Step 1 Will the activity disturb the ground surface or any culturally modified trees?	The activities of ARTC will involve ground disturbance through trenching and other excavation activities that may involve the use of heavy earth-moving machinery. The proposal activity is not an exempt activity or a low impact activity.	Yes
If the answer to Step 1 is 'yes', proceed to Step 2		
Step 2a Are there any relevant records of Aboriginal heritage on AHIMS to indicate presence of Aboriginal objects?	AHIMS indicated that there are no Aboriginal sites within the CIZ extension boundaries. Previously recorded isolated find A2I-2 is located near to the CIZ extension, but outside it.	Yes
Step 2b Are there other sources of information to indicate presence of Aboriginal objects?	There are no other sources of information to indicate that Aboriginal objects are likely in the study area.	No
Step 2c Will the activity impact landforms with archaeological sensitivity as defined by the Due Diligence Code?	Landforms with identified archaeological sensitivity are not present in the study area.	No
If the answer to any stage of Step 2 is 'yes', proceed to Step 3		
Step 3 Can harm to Aboriginal objects listed on AHIMS or identified by other sources of information and/or can the carrying out of the activity at the relevant landscape features be avoided?	The proposal will avoid harm to known Aboriginal sites, and landforms with identified archaeological sensitivity are not present. ARTC has elected to undertake a visual inspection as a precautionary measure.	No.
If the answer to Step 3 is 'no', a visual inspection is required. Proceed to Step 4.		
Step 4 Does the visual inspection confirm that there are Aboriginal objects or that they are likely?	Visual inspection concluded that there is a low likelihood of subsurface archaeological deposits within the study area. So long as management measures are implemented to delineate the location of A2I-2 so that it can be avoided by project impacts.	No
Conclusion		
Proceed with caution		

3 NON-ABORIGINAL HERITAGE

3.1 POTENTIAL IMPACTS TO HERITAGE ITEMS

The proposed CIZ extension involves the boundary moving closer to several listed heritage items, as well as changing its intersection with the SHR curtilage of Junee Station and Yard Group (**Figure 3-1**). The assessment below documents these interactions in line with the *Guidelines for preparing a statement of heritage impact* (DPE 2023a) and *Heritage Council's Historical Archaeology Code of Practice*.

Impacts to 12 heritage items located within 200 metres (m) of the CIZ extension could be associated with vibration, accidental impact, and viewsheds and vistas.

3.1.1 Vibration

The proposed construction works, including compaction, earthworks and piling, can generate vibration, which may cause cosmetic and structural damage to heritage structures. Materials used in historic buildings, such as brickwork and stone, can be vulnerable to vibrations due to an inability to deform without rupturing: however, heritage buildings should not be assumed as being structurally unsound.

Heritage items located in proximity to the proposal could be vulnerable to the effects of vibration from the proposed works, if not properly managed. A conservative assessment threshold (being three millimetres per second (mm/s) has been applied for vibration, to identify potential risks of indirect impacts to heritage items for cosmetic damage. This translates to a safe working distance of around 15 m for vibratory piling and 20 m for vibratory compaction. Recommended safe working distances, derived room the *Construction Noise and Vibration Guideline – Public Transport Infrastructure* (CNVG-PTI) (TfNSW, 2023), are presented in the CCHMP. The vibration risks and impacts will be confirmed via implementation of the Construction Noise and Vibration Monitoring Program (CNVMP), including the development of Construction Nose and Vibration Impact Statements in accordance with CoA E78. The minimum working distances will vary depending on the plant item, building types and foundations and local geotechnical conditions.

Ongoing operational impacts are largely restricted to impacts caused by the vibration of passing trains. These are predicted to be negligible, as items located in proximity to the railway corridor are already subject to continuous vibration as a result of the railway track (GML 2022: 11-23). Where there is risk of impact to identified heritage items during works, these would be considered according to the nature of the works and managed through mitigation measures. These include the selection of equipment and construction methods, pre-construction condition surveys and monitoring of these structures, where risk remains.

Vibration monitoring will be carried out when vibration intensive tasks are occurring within the minimum working distances to heritage structures. In accordance with CoA E81, if vibration

monitoring equipment is required to be installed at heritage-listed structures, advice from a heritage specialist will be sought on methods and locations for installing equipment.

Where the monitoring identifies exceedances in the relevant criteria, or where impacts are identified, additional mitigation measures will be identified and implemented to appropriately manage impacts. These include modifying plant specifications and/or work methodology and delineating additional exclusion areas around structures to restrict high-vibration activities occurring too close to sensitive structures (A2I CCHMP 2025: 73).

The exclusion zones for retained heritage items or structures will be marked on the environmental control maps, site plans and avoided.

3.1.2 Accidental impact

There is potential for accidental damage to heritage items in proximity to construction activities. Movement of heavy machinery and intrusive works near heritage structures presents a low risk of inadvertent damage to heritage structures adjacent to the proposal.

Prior to the commencement of construction, retained heritage items will be inspected by suitably qualified person to demarcate the exclusion measures (such as fencing). Items vulnerable to damage would be temporarily relocated or alternative measures implemented to avoid impact. Exclusion measures would be inspected regularly during construction to ensure protection of these heritage items (EIS 11-28, NAH10).

3.1.3 Viewsheds and vistas

During construction, views of construction activities would be temporary and short-term. This would not have a material impact on heritage items that have views to the proposal site. Viewsheds from heritage items are unlikely to be impacted by the proposal.

3.2 Assessment of Listed heritage items outside of the CIZ extension

There are 12 heritage listed items within 200 m of the CIZ extension (**Figure 3-1**). Potential impacts to these items are assessed in Table 3-1.

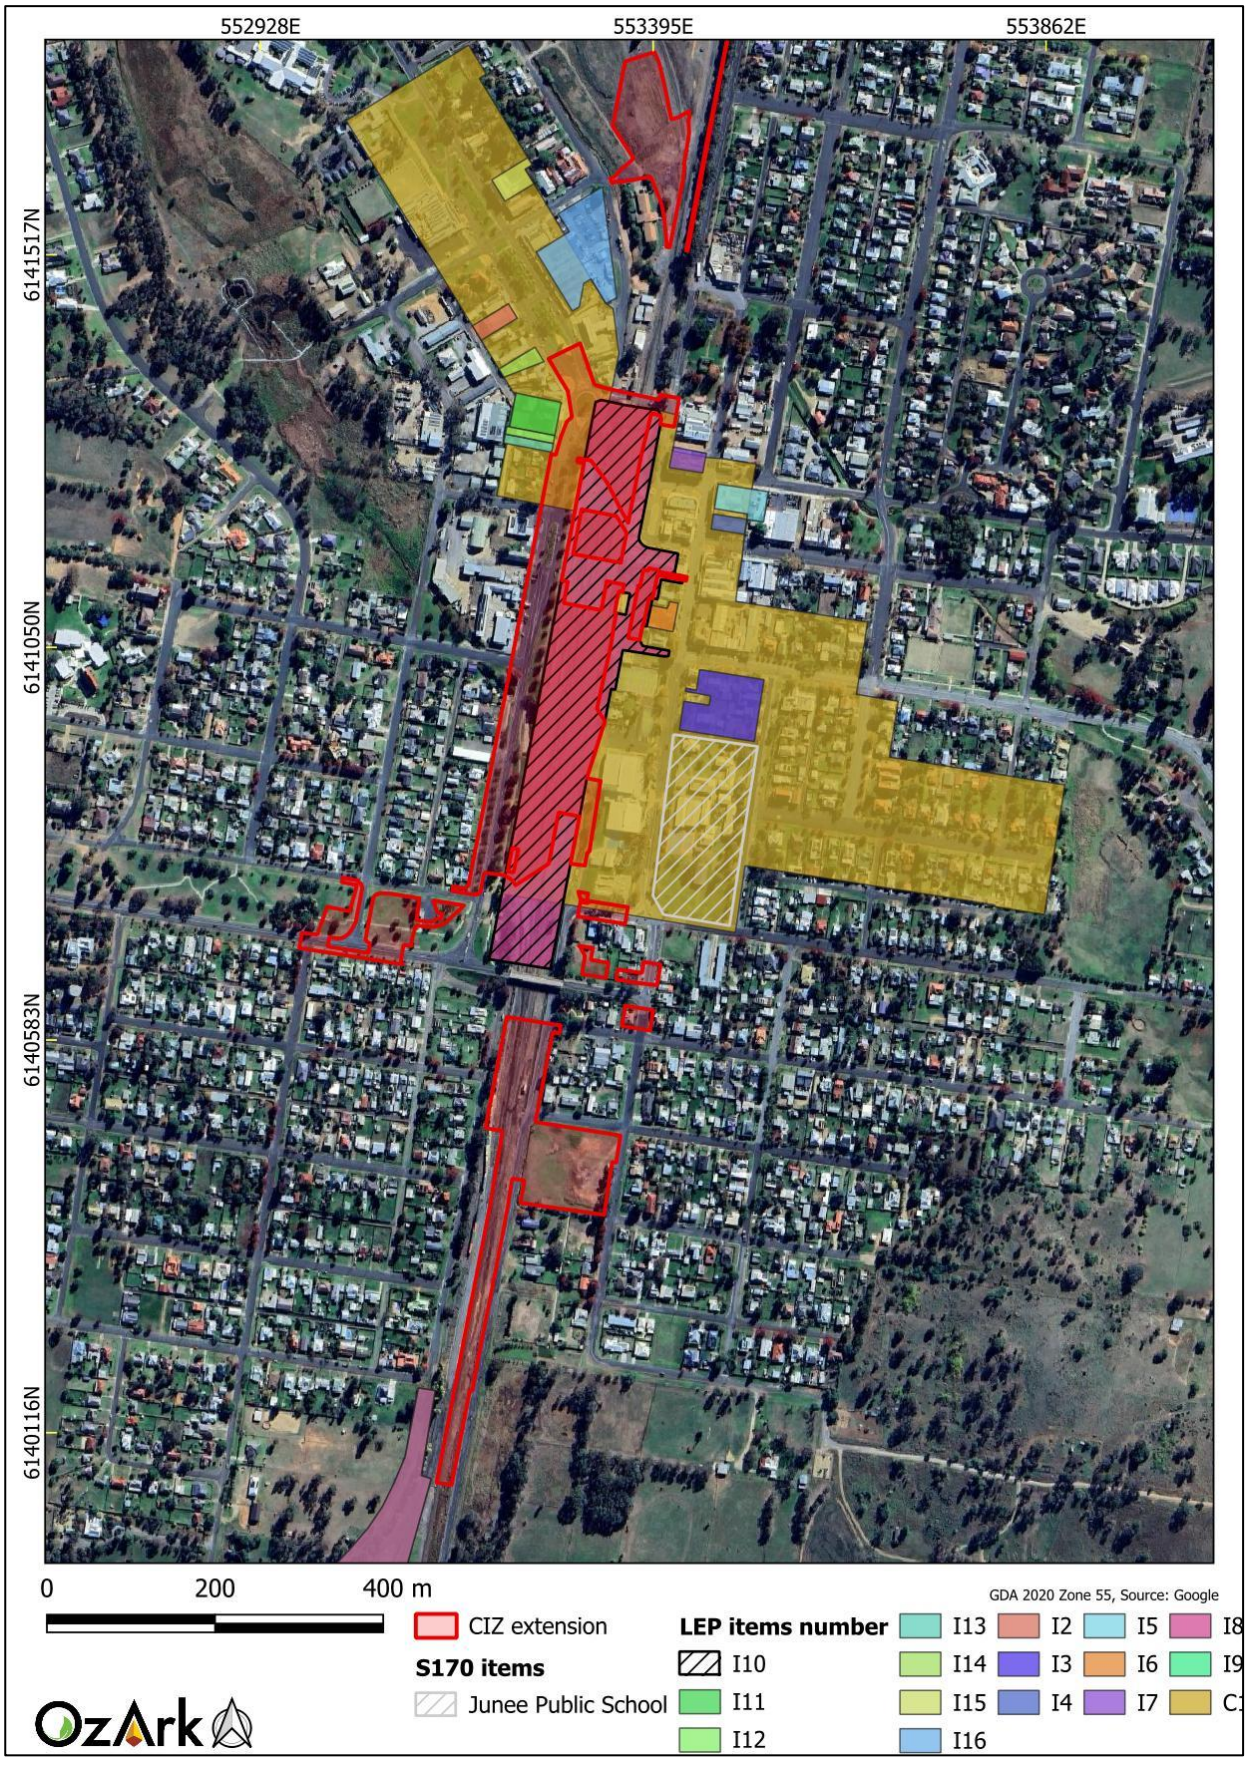

Table 3-1: Impacts to heritage items outside of the CIZ extension.

Affected registered heritage items	Assessment summary
Court house, Junee LEP I3	Item I3 is approximately 50 m from the CIZ extension. It is assessed that impacts to this structure will be temporary and negligible.
Former 'Westpac Bank, Junee LEP I4	Item I4 is approximately 90 m from the CIZ extension. It is assessed that impacts to this structure will be temporary and negligible.
'Commercial' Hotel, Junee LEP I5	Item I5 is approximately 96 m from the CIZ extension. It is assessed that impacts to this structure will be temporary and negligible.

Affected registered heritage items	Assessment summary
Former 'Loftus' Hotel, Junee I7	Item I7 is approximately 27 m from the CIZ extension. Works in this area involve traffic management only, it is assessed that impacts to this structure will be temporary and negligible.
'Junee' Hotel, Junee LEP I11	Item I11 abuts the CIZ extension. Works along Broadway Street involve traffic management only, therefore it is assessed that impacts to this structure will be temporary and negligible.
Former general store, Junee LEP I12	Item I12 abuts the CIZ extension. Works along Broadway Street involve traffic management only, therefore it is assessed that impacts to this structure will be temporary and negligible.
Former solicitors' office, Junee LEP I13	Item I13 abuts the CIZ extension. Works along Broadway Street involve traffic management only, therefore it is assessed that impacts to this structure will be temporary and negligible.
Australia and New Zealand Banking Group Bank, Junee LEP I14	Item I14 abuts the CIZ extension. Works along Broadway Street involve traffic management only, therefore it is assessed that impacts to this structure will be temporary and negligible.
Former 'Broadway' Hotel, Junee LEP I15	Item I14 is approximately 190 m from the CIZ extension. Works along Broadway Street involve traffic management only, therefore it is assessed that impacts to this structure will be temporary and negligible.
'Broadway Stores Group', Junee LEP I16	Item I16 is approximately 37 m from the CIZ extension. Works along Broadway Street involve traffic management only, therefore it is assessed that impacts to this structure will be temporary and negligible.
Former 'Jadda Centre, SHR 01687 Junee LEP I2	Item I2 is approximately 59 m from the CIZ extension. Works along Broadway Street involve traffic management only, therefore it is assessed that impacts to this structure will be temporary and negligible.
Junee Public School, s170	Junee Public School is approximately 90 m from the CIZ extension. It is considered that the item will not be impacted by the temporary works involved with the proposal

As the proposed works are primarily temporary disturbances during construction, it has been assessed that impacts to the heritage items outside of the CIZ extension will be negligible.

Figure 3-1: Listed items in proximity to the CIZ extension.

3.3 LISTED HERITAGE ITEMS POTENTIALLY IMPACTED BY THE CIZ EXTENSION

The CIZ extension is in proximity to items in the listed Junee Railway Station (SHR 01173) curtilage; Junee Railway refreshment rooms (SHR 01173, Junee LEP I10); Junee Railway Station Moveable Relics (SHR 01172); the Junee Conservation Area (Junee LEP C1); and the Junee Post Office (SHR 01425, CHL ID 105500) (**Figure 3-2**). Potential impacts to these items will be assessed below.

Figure 3-2: Heritage items within the CIZ Extension.

3.3.1 Junee Railway Station, SHR 01173, Junee LEP I8

The Junee Railway Station is an item of State heritage significance, listed as the "Junee Station, Yard, and Locomotive Depot" (SHR 01173). The station itself is listed on the Junee LEP (I8) as an item of local significance. It is also listed as an item of state heritage significance on the ARTC's s170 Heritage and Conservation Register (4280760).

The LEP listing for the station describes the significance of the station as:

> *Junee Railway Station is of architectural significance and interest and the station is very important historically in the town. Junee owed its rapid growth and prosperity late last century to its development into a major rail centre.*
>
> *The station, dating from 1885, is of social importance to the community on account of its lengthy association with rail travel at Junee.*
>
> *The Railway Station is a key element in the streetscape of Junee, as it plays an important role in creating the historic qualities of central Junee."*

Potential impacts to Junee Railway Station

It is understood that the proposed works outlined in **Section 1.2** will not disturb the ground and additional areas within the SHR heritage curtilage of the railway station yard will be utilised primarily for access, temporary material laydown and stockpiling.

As the Junee Railway Station and yard continues to be operational, a condition of use of the station yard during a Martinus 'possession' is that the yard be restored to its current state between phases of work. This is to ensure the function of the yard is not affected. As part of the heritage values of Junee Railway Station and yard relate to its continued use within the rail network, it is noted that this function will not be permanently impacted by the temporary works proposed.

The exclusion zones for retained heritage items or structures will be marked on the environmental control maps, site plans and avoided.

Once the temporary works within the CIZ extension have been completed, the Junee Railway Station will revert to its existing condition and use, and the stations' enduring significance will be retained.

During construction, vibration intensive works would occur within safe working distances. This has assumed a more stringent criterion (3 mm/s). Mitigation measures have been identified to manage these risks. This includes the selection of equipment and construction methods, pre-construction condition surveys and monitoring of the structures, where risk remains.

It is assessed that impact to the Junee Railway Station in relation to the CIZ extension is negligible.

3.3.2 Junee Railway refreshment rooms, SHR 01173, Junee LEP I10

The Junee Railway refreshment rooms are included as part of the Junee Railway Station and yard listing on the State Heritage Register (SHR 01173) and listed separately from the overall railway station as item I10 on the Junee LEP. The rooms are of identified historical and architectural significance for their Victorian Free Classical design that highlights the importance of the railway in Junee's development history. Additionally, the item has enduring social significance for its' continued use and high integrity.

The two-storey brick accommodation building is situated adjacent to the station and features stucco window dressings and a corrugate iron hipped roof which stands behind a parapet with projecting cornice and rusticated quoins.

Potential impacts to refreshment rooms

The CIZ extension moves into the car park area immediately south of the Junee Station refreshment rooms. Proposed works in this area may include the following:

- Stockpiling and material laydown areas
- Access points and access tracks.

During construction, any vibration intensive works would occur within safe working distances. This has assumed a more stringent criterion (3 mm/s). Mitigation measures have been identified to manage these risks. This includes the selection of equipment and construction methods, pre-construction condition surveys and monitoring of the structures, where risk remains.

An exclusion zone associated with retained heritage items or structures, will be marked on the environmental control maps, site plans and avoided.

It is assessed that impact to the Junee Railway refreshment rooms in relation to the CIZ extension is negligible.

3.3.3 Junee Railway Station movable relics, SHR 01172, s170.

The Junee Railway Station movable relics holds state significance (SHR 01172) and local heritage values (Junee LEP I9). The item encompasses an area within the larger Junee Railway Station SHR curtilage and includes the following movable elements:

- Platforms
    - All station signage
    - Blue timber platform benches with incised "Junee" lettering
    - Double-sided Timetic electric clock suspended under platform canopy
    - Gooseneck platform lamp posts

- Bell and chain under the canopy
- Wall-mounted carriage lamps
- Cast iron stormwater grates
- Original and early door and window hardware (locks, handles, sash locks and lifts etc)
- Semaphore signal in yard
- Three Countrylink luggage trolleys
- Two large circular concrete planter pots

- Platform building and offices
  - Fitted timber waiting room benches
  - Original and early light fittings, switches, chains and timber mounting blocks
  - Cast iron and concrete door thresholds and boot scrapers
  - Timber surrounds and cast iron grates
  - Bevelled mirror with moulded timber frame
  - Large four-panel Victorian timber doors in storage
  - Steel trolley in storage
  - Timber pigeonhole shelving
  - Timber desk with turned legs and drawers
  - Square timber desk with turned legs, possibly cedar
  - Large desk with drawers, c1960s
  - Open timber desk shelving
  - Luggage scales
  - Red Ajax safe
- Refreshment Rooms
  - Large wall mirrors
  - Framed prints
  - Cupboards and cabinets, curves timber bar and cabinetry
  - Galvanised bucket, signal lamps, “Safety Notices” cabinet, framed prints, illuminated sign “Counter meal services”, Bakelite speaker on wall, cast iron urn and plinth
  - Cast iron stove /range – J Ward Ltd Sydney – in kitchen

- Blackboards in storage
- Fitted timber racking in kitchen
- Circular coat hooks in storage
- Wardrobe / cabinet c1930s, timber screen panel doors in storage
- Timber pigeonhole cabinet
- Cast iron piece of machinery, unknown function

Potential impact to Junee Station moveable relics

The Junee Station moveable relics were not assessed as part of the GML 2020 EIS technical paper 3. The key heritage values of the item relate to the following criteria (a) historical significance; (b) historical association; (c); aesthetics/technical achievement; (d) social significance; (e) rarity and (g) representativeness. While the proposal would not involve activities that would directly impact the moveable relics, there is potential for accidental damage related to vibratory works.

During construction, any vibration intensive works would occur within safe working distances. In accordance with Management Measure NAH-2 (UMM NAH10), vibration will be monitored and items vulnerable to vibration or damage would be temporarily relocated, or alternative measures implemented, to avoid impact.

It is assessed that impact to the Junee Station moveable relics in relation to the CIZ extension is minor.

3.3.4 Junee Heritage Conservation Area, Junee LEP Zone C1

Junee Heritage Conservation Area recognises an area on both sides of the railway line and includes the majority of the CBD and some residential areas. The Conservation Area includes a majority late nineteenth century buildings, but some 1920s -1930s structures are present. The conservation area encompasses areas of important architectural townscape and affords protection to historical buildings within the CBD, railway and some residential areas (Junee Council 2025).

Potential impacts to Junee Heritage Conservation Area

The visual characteristics of the conservation area are the intact nature of the streetscape. These overall characteristics would not be changed by the proposal, as much of the streetscape was constructed after the establishment of the rail network. The proposed works within the CIZ extension are of a temporary nature and include road closures and traffic management. As such it is considered that the proposal would have a negligible impact on the heritage significance of the Junee Heritage Conservation Area.

3.3.5 Commonwealth listed heritage

3.3.5.1 Junee Post Office, CHL ID 105500, SHR 01425, Junee LEP I6

The Junee Post Office is listed on the Commonwealth Heritage List (CHL) since 15 July 2004 as well as State heritage register (item 01425) and the Junee LEP (I6). The Junee Post Office was the second post office erected in Junee post-1886 when the original early 1880s building was found to be inadequate. The building was built in a Victorian Regency style with an unusually wide pavement width verandah and contributes to the overall historic streetscape of central Junee. The Australian Heritage Database further describes the aesthetic design of the building which reflects the development of Junee into a prosperous major rail centre:

> *"[T]wo storey building built of brick; the walls (with the exception of those at the rear) have been painted. At one end the building is single storey with a parapet and parapeted gable. The main roof is hipped and clad with corrugated iron. Three chimneys of face brick have render to their bases and moulded tops. Paired, decorative brackets support the eaves. There are brick flat arches over the windows, and there is slight emphasis to the window sills. A major feature of the facade is an unusually wide (pavement width) verandah to the ground floor which has a low pitch roof clad with iron and paired cast iron posts of restrained design. A dentil course decorates the verandah."*

In May 1878, in anticipation of the opening of the new railway linking Sydney to Junee, the residents of Junee, Boree and Wantabadgery requested that a new office be opened at Junee Railway Station. A receiving station was subsequently opened at the station in June 1878 in Mr. George Dobbyns' store near the station, just six days after the opening of the railway. With the growing population, pressure to build the new post office increased and in 1886, the PMG approved construction of the new building. A site was purchased from the Railway Department and Colonial Architect, James Barnet, forwarded the plans for the post office to the Works Department in January 1887. As the building was to be attached to a railway premises, the Railway Department took charge of the construction. The building was first occupied by 11 July 1888 (Heritage NSW). The item meets SHR criteria (a) historical significance; (c) Aesthetic significance; (d) social significance; (e) research potential; (f) rarity; (g) representativeness.

<u>Potential impacts to Junee Post Office</u>

The CIZ extension moves into the car park area at the rear of the Junee Post Office. Proposed works in this area may include the following:

- Stockpiling and material laydown areas
- Access points and access tracks.

During construction, any vibration intensive works would occur within safe working distances. This has assumed a more stringent criterion (3 mm/s). Mitigation measures have been identified to manage these risks. This includes the selection of equipment and construction methods, pre-construction condition surveys and monitoring of the structures, where risk remains.

An exclusion zone for heritage items or structures will be marked on the environmental control maps, site plans and avoided.

It is assessed that impact to the Junee Post Office in relation to the CIZ extension is negligible.

3.4 UNLISTED POTENTIAL HERITAGE ITEMS

Visual inspection of the CIZ extension was completed by OzArk Principal Archaeologist Dr. Jodie Benton on Wednesday 18 June 2025. The results of the inspection for each CIZ extension zone are presented below.

3.4.1 Olympic Highway CIZ extension zone

3.4.1.1 Old shunting lines and Depot potential archaeological area

One area of historic archaeological potential was identified within the Olympic Highway CIZ extension zone. Two linear alignments of bricks were identified approximately 30 m west of the Junee to Illabo railway line and 170 m north of the Junee Railway Station SHR curtilage (**Figure 3-3**).

Figure 3-3: View south of the identified linear brick feature.

Upon examination of 1929 mapping and historical records, the brick alignments are likely associated with the shunting lines that once formed part of the Junee railway network in that area and have since been removed. The 1929 mapping shows a shunting area north of the Junee

Railway Station and Yard at the location of the identified brick alignments (**Figure 3-6**). The shunting lines were connected to the old depot, which was demolished in 1950, after construction of the Roundhouse depot was completed (Walster 2017: 32) (**Figure 3-6**). Construction of the locomotive sheds and workshops of the old Junee depot began in 1884 and by 1912 it was proposed that the facilities needed to be moved to a site further out of the township. The depot was demolished in the 1950s after the construction of the Roundhouse Depot.

While the area is not listed on any registers, it has been assessed that it meets SHR criteria (a) historic significance and criteria (b) historical association.

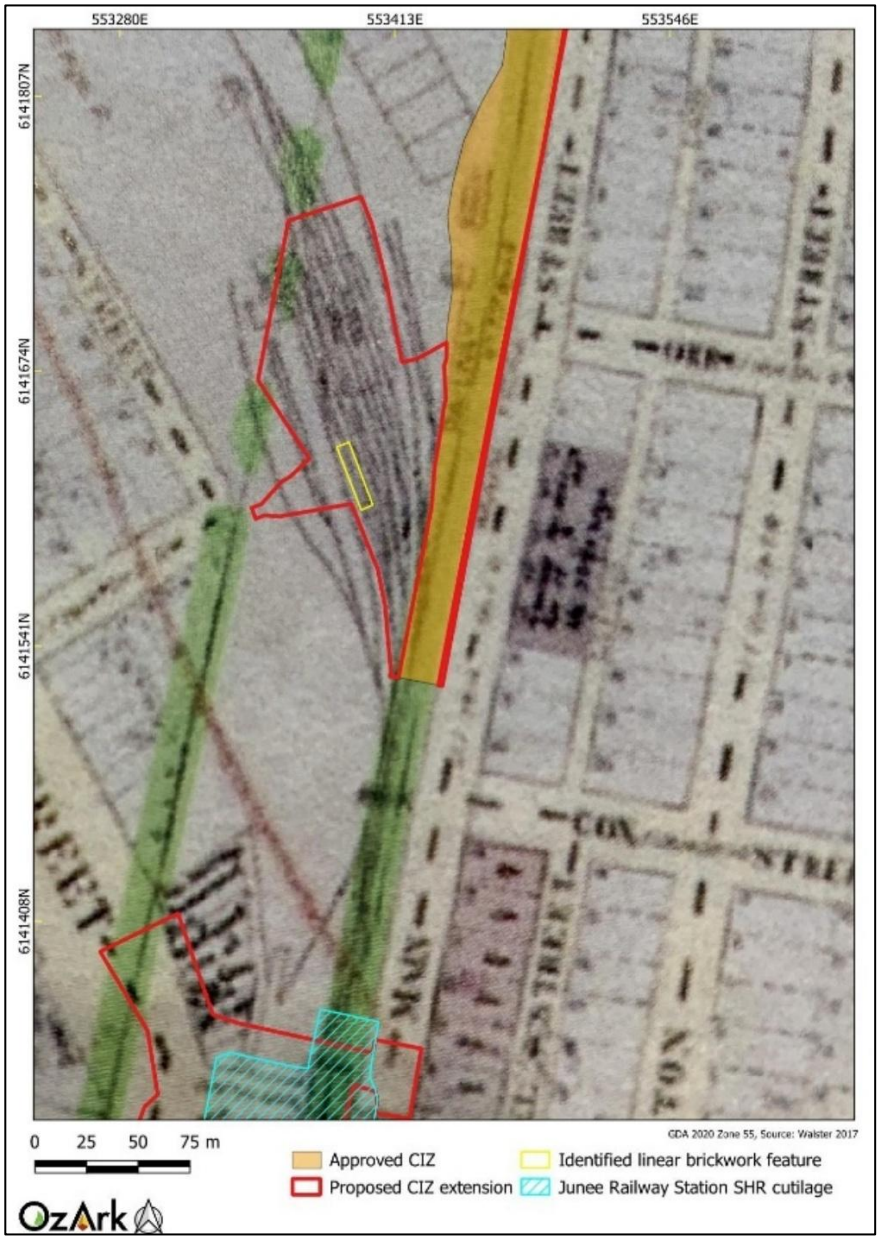

Figure 3-4: Demolition of the old Junee depot c. 1950 (Source: Walster 2017)

Figure 3-5: The old Locomotive Sheds & Workshop, 1917. Source: Walster 2017.

Figure 3-6: 1929 map of the area north of the Junee Railway Station and Yard (source: Walster 2017, pp. 17).

Potential impacts to old shunting lines and depot potential archaeological area

Within this area of the CIZ extension it is likely that further archaeological deposits of potential heritage significance associated with the shunting lines and old depot are present on and below the surface (**Figure 3-6**).

All efforts should be made to ensure no inadvertent impact to the identified brickwork and potential historic archaeological site. The area should be demarcated as an asset protection zone (**Figure 3-7**). Further management recommendations for the protection of this area are provided in **Section 4**.

Figure 3-7: Old shunting lines and depot asset protection zone.

3.4.2 Junee Railway Station CIZ extension area

3.4.2.1 1878 and 1883 Railway Stations and refreshment rooms potential archaeological area

Prior to the current 1885 railway station that was erected on the eastern side of the railway lines, two previous timber stations were temporarily built on the western side. The first was built in 1878 and was replaced by a temporary station and refreshment rooms in 1883, after a fire destroyed the original station and refreshment rooms in January 1882 (**Figure 3-8**). The current station was controversially constructed on the eastern side in 1885 (Walster 2017).

Figure 3-8: The second temporary railway station and refreshment rooms at Junee c 1883/1884.

The platform visible in **Figure 3-8** now forms part of the existing island platform and the early station buildings were constructed directly opposite the present refreshment rooms (Walster 2017: 25).

Potential impacts to early station buildings potential archaeological area

Examination of historical records and imagery indicates that while the original location of these structures is located within the CIZ extension, any potential archaeological deposits or remnant features of these structures would have been removed during previous works within the railway corridor. Additionally, the proposed works within this portion of the CIZ extension does not involve

excavation of the ground surface and only involves temporary traffic diversion as shown in **Figure 1-4**.

It is therefore assessed that the CIZ extension will have negligible impact on the early station buildings potential archaeological area and an asset protection zone is not required.

3.4.3 Kemp Street CIZ extension zone

The proposed works (**Section 1.2**) within the Kemp Street CIZ extension do not encroach upon any LEP, SHR or commonwealth heritage curtilages. The works are temporary and will not permanently alter the streetscape in the areas surrounding the Junee Heritage Conservation Zone.

The discrete areas that comprise the Kemp Street CIZ extension zone were all noted during the inspection as being within modified land, within which no historic heritage items or areas of potential subsurface historic archaeology were recorded.

3.5 CONCLUSION – NON-ABORIGINAL HERITAGE

The proposed works within the CIZ extension do not entail ground disturbance, and primarily include activities such as signal re-routing, temporary laydown/stockpiling, work compounds, and areas from which to obtain better access to the approved CIZ work area. This assessment has concluded that based on the nature of these impacts (**Section 1.2**), heritage fabric and values within LEP, SHR and Commonwealth heritage curtilages will not be impacted.

Based on the conclusion that the proposed works through vibration have the potential to impact moveable relics within the Junee Railway Station and the refreshments room, it is recommended that vibrations be monitored, and the moveable relics be inspected by a heritage specialist prior to construction. If deemed necessary by the heritage specialist, some items may be temporarily relocated within the Railway Yard or moved to the Junee Roundhouse Railway Museum per CoA NAH10. If temporary relocation occurs, a Standard Exemption Record Keeping Form[1], under Standard Exemption 17: Temporary relocation of moveable heritage items, should be prepared and kept by Martinus / ARTC Inland Rail.

OzArk identified two areas of potential archaeological deposit: the old shunting lines and depot potential archaeological area; and the 1878 and 1883 Railway Stations and Refreshment Rooms archaeological area. It has been assessed that the old shunting lines and depot archaeological

[1] The following disclaimer is from the Standard Exemption Record Keeping Form: Use of the standard exemptions is self-assessed. In completing this form, you acknowledge that this record is not for assessment purposes and does not represent an endorsement of the Heritage Council for the work or use of exemptions. This form may be requested as part of an audit or compliance investigation. This information cannot be relied on as a defence to prosecution. It is used here for a CSSI project as a support for a Consistency Assessment.

area hold heritage values and therefore should be demarcated by an asset protection zone (**Figure 3-7**).

It can be concluded that the proposed CIZ extension in the Junee LGA would have “no impacts on heritage items (including areas of archaeological potential) beyond the impacts approved under the terms of this approval”, as long as the measures outlined in Section 6 of the CCHMP and those listed below are implemented. This will ensure that proposed works will not directly or indirectly impact any identified or potential heritage items, particularly the potential archaeological deposit at the Olympic Highway CIZ extension zone.

4 MANAGEMENT MEASURES

To ensure that the activities within the CIZ extension in Junee LGA do not inadvertently impact Aboriginal or non-Aboriginal heritage, the following recommendations should be adhered to:

1. None of the original fabric of the Junee Railway Station, Junee Post Office and Junee Railway refreshment rooms is to be harmed in any way and demarcation (using barricading or flagging) of the CIZ extension footprint within or adjacent to listed heritage sites is required to ensure no inadvertent impacts beyond this, as per CCHMP management measure NAH2.

2. The monitoring and inspection requirements in Section 7.3 of the CCHMP and Section 8.4 of the *Construction Noise and Vibration Management Plan* should be followed to reduce the risk of harm to heritage structures and items. Consideration should be taken to temporarily moving any 'at-risk' elements of movable heritage.

3. Prior to the commencement of construction, a suitably qualified specialist should complete a site visit to demarcate any exclusion areas and determine which moveable relics should be temporarily relocated per CoA NAH10 via further reporting.

4. If ARTC/IR are required to move any relics listed under the SHR or LEP Junee Railway Station moveable relics" listings, a S57 (2) standard record keeping form under exemption 17 will be required and the elements' original location recorded.

5. The moveable relics should be relocated to a predetermined safe location such as the Junee Roundhouse Railway Museum, if agreeable to the museum staff.

6. The monitoring and inspections requirements for vibration for Stage B works should also be applied to the moveable relics located within the CIZ extension.

7. A protection 'wafer' should be placed in the Old Shunting lines and depot asset protection zone, to protect areas of potential subsurface deposit and linear brick work (as described in Section 3.4.1) and ensure no harm to potential historic heritage fabric / archaeology. The wafer should consist of geotechnical fabric overlain with a deposit of clean sand and then bluestone, or something akin to this.

8. Only the proposed activities (Section 1.2) outlined in this document have been assessed for their impacts to heritage within the CIZ extension. If additional activities are proposed, particularly anything ground disturbing or permanent, then further heritage impact assessment would be required.

9. In the unlikely event that the works encounter potential heritage items, the Unexpected Heritage Finds and Human Remains Procedures, Appendix B of the CCHMP should be followed.

10. If further extension of the CIZ is required that interacts with listed heritage places, then further assessment would be required to ensure that the provisions of CoA 15(c) can be met.

11. Other provisions as outlined in the CCHMP, specifically regarding heritage inductions for work crews, should be followed.

Date: 10 July 2025

Dear Sir or Madam:

AHIMS Web Service search for the following area at Datum :GDA, Zone : 55, Eastings : 552753.0 - 554019.0, Northings : 6140019.0 - 6143153.0 with a Buffer of 0 meters, conducted by Imogen Crome on 10 July 2025.

The context area of your search is shown in the map below. Please note that the map does not accurately display the exact boundaries of the search as defined in the paragraph above. The map is to be used for general reference purposes only.

A search of Heritage NSW AHIMS Web Services (Aboriginal Heritage Information Management System) has shown that:

1	Aboriginal sites are recorded in or near the above location.
0	Aboriginal places have been declared in or near the above location. *

Appendix C Biodiversity Assessment Memo Report (East Coast Ecology)

Constance Georgiou
Environmental Approvals Advisor
Martinus Rail Pty Ltd

4th June 2025

Biodiversity Memorandum: Inland Rail (Junee Precinct)

Dear Constance

Martinus Rail Pty Ltd (Martinus) on behalf of the Australian Rail Track Corporation (ARTC) propose to conduct vegetation removal and thinning in the Junee Precinct to accommodate multiple activities to facilitate the construction of the Albury to Illabo (A2I) Inland Rail upgrade (the Proposed Change).

The Proposed Change is located outside of the construction boundary of the Inland Rail program (the Project) and was not assessed as a part of the Inland Rail, Albury to Illabo Revised Technical Paper 8: Biodiversity Development Assessment Report (BDAR) (WSP, 2024).

1.1 Scope of Assessment

East Coast Ecology Pty Ltd (ECE) was commissioned by ARTC c/- Martinus to prepare a Biodiversity Memo, for the Proposed Change. The scope of this assessment was to identify and assess impacts to species and ecological communities listed as threatened under the *Biodiversity Conservation Act 2016* (NSW) (BC Act), *Fisheries Management Act 1994* (FM Act) and Matters of National Environmental Significance (MNES) listed under the *Environment Protection and Biodiversity Conservation Act 1999* (EPBC Act) and where relevant, the requirements of the *Biosecurity Act 2015* (NSW), and relevant State Environmental Planning Policies (SEPPs).

The area assessed in this memo has been defined by representatives of Martinus, this memo has been prepared to accompany a Consistency Assessment (CA) in relation to the Proposed Change, and is hereafter referred to as the Subject Land.

1.2 The Subject Land

The Subject Land is a series of scattered sites within the Town of Junee in the Junee Local Government Area (LGA), covering an area of approximately 10.8ha. The Subject Land is comprised of 22 individual sites, each site is depicted in **Figure 1 - Figure 3.**

Figure 1. Location of the Subject Land, Junee NSW (Map 1 of 3).

Figure 2. Location of the Subject Land, Junee NSW (Map 2 of 3).

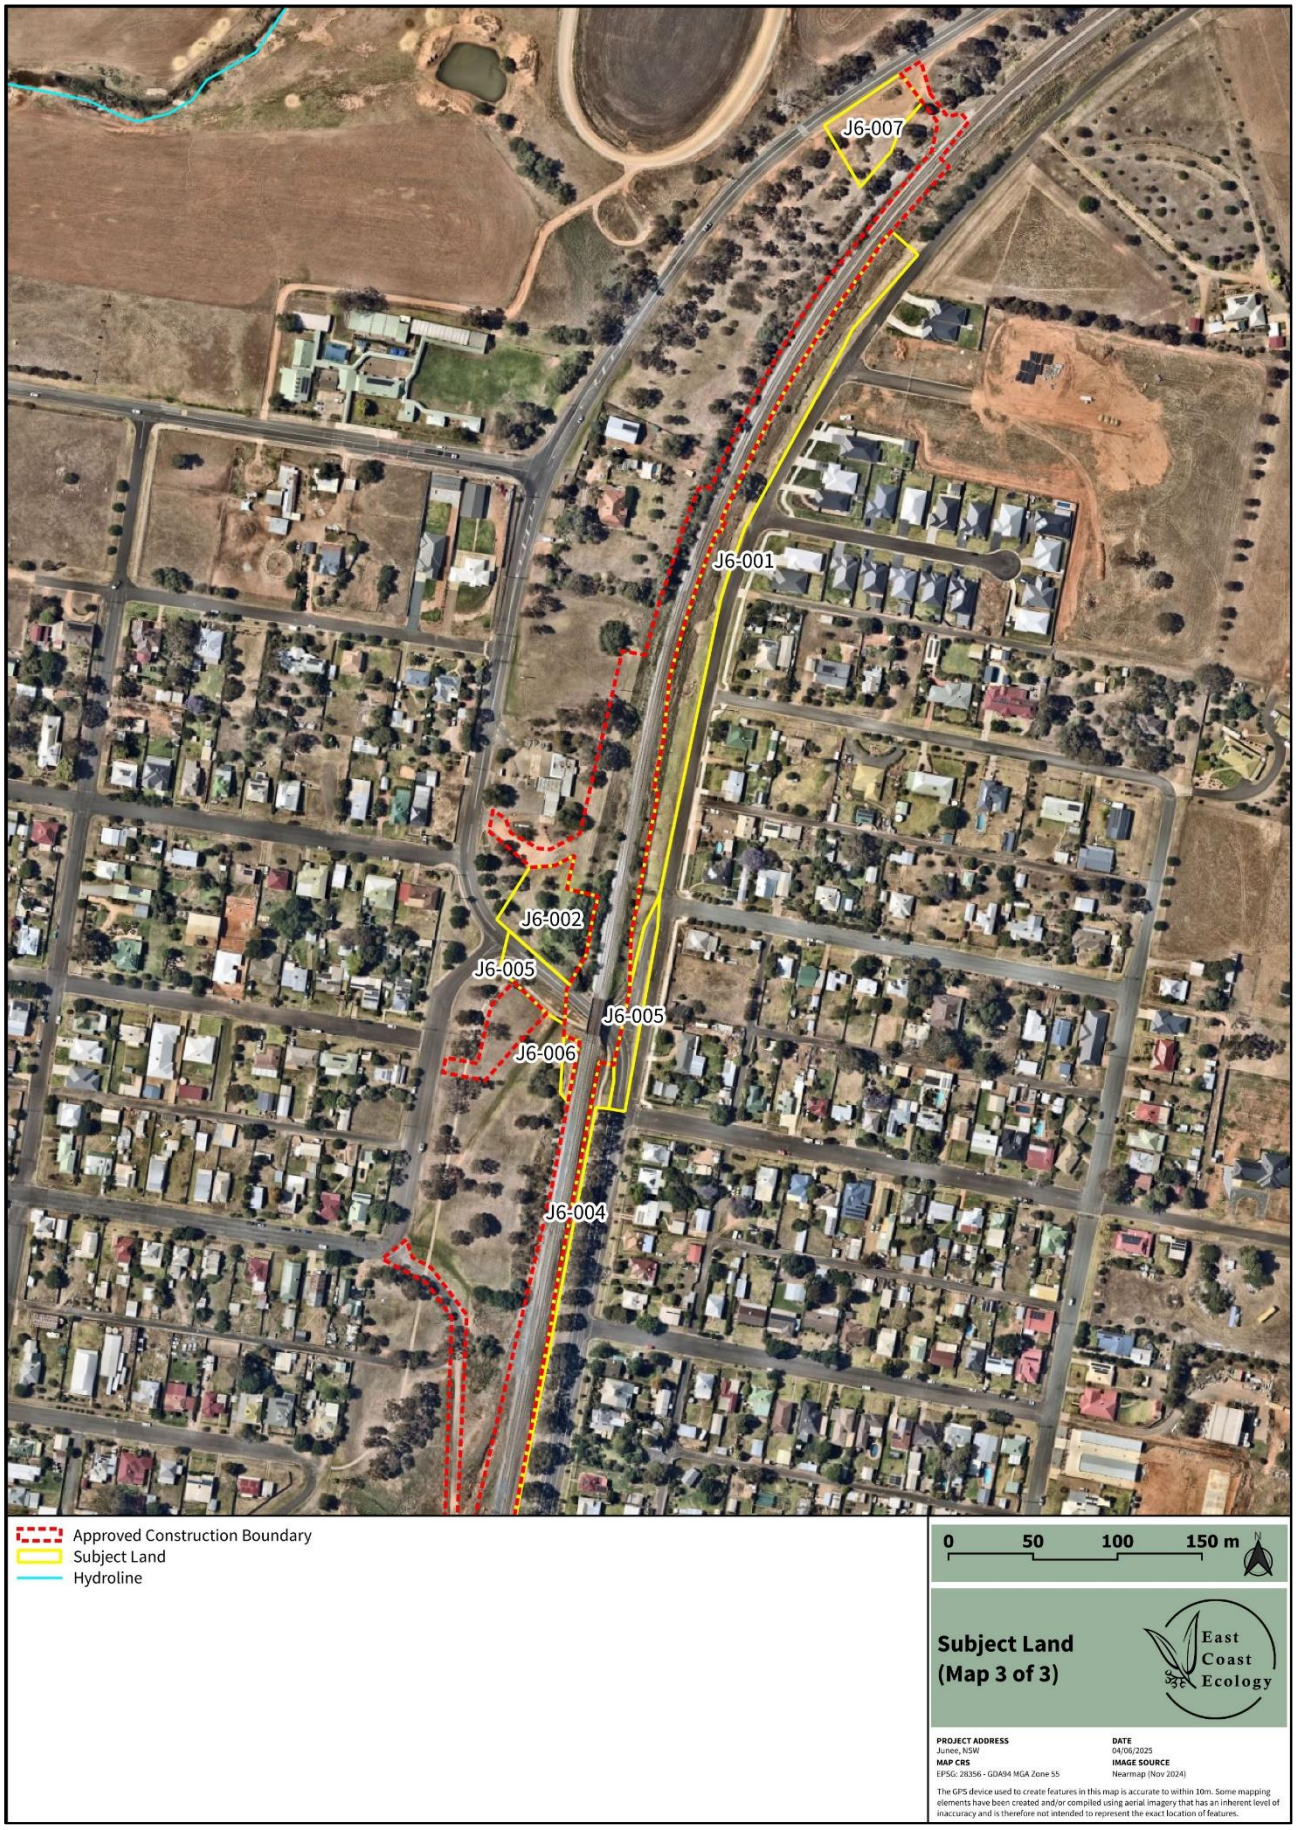

Figure 3. Location of the Subject Land, Junee NSW (Map 3 of 3).

2. METHODS

A thorough literature review of local information relevant to the Subject Land was undertaken. Searches using NSW Wildlife Atlas (BioNet) (NSW DCCEEW, 2025a), the Commonwealth Protected Matters Search Tool (PMST) (DCCEEW, 2025) and the Fisheries Spatial Data Portal (DPI, 2025) were conducted to identify all current threatened flora and fauna, as well as migratory fauna records, within a 5km radius of the Subject Land. A literature review was also undertaken of all relevant project documentation, including;

- Biodiversity Development Assessment Report (WSP, 2024), and
- Environmental Impact Statement (ARTC, 2022).

This assessment provides the results of the assessment of the sites that were determined to not contain PCT's vegetation or other ecological constraints.

2.1 Native Vegetation

A review of the State Vegetation Type Map (NSW DCCEEW, 2025b) was used to assist in the identification of Plant Community Types (PCTs) within and surrounding the Subject Land. The PCT of 'best-fit' was determined based on the floristic descriptions within the BioNet Vegetation Classification System database (NSW DCCEEW, 2025c).

2.2 Threatened Flora Survey Methods

Threatened flora that are known or likely to occur within the Subject Land and immediate surrounds (i.e. within 5km) were identified following a review of BioNet and the PMST. Soil mapping (NSW DCCEEW, 2025d) and topography (Google Earth) were also used to provide further context on habitat constraints for threatened flora.

Targeted surveys were undertaken by Ecologist; Chris Keogh and Josh Brown on the 2nd March and 14th April 2025, using parallel field traverses in accordance with the 'Surveying threatened plants and their habitats - NSW survey guide for the Biodiversity Assessment Method' (DPIE, 2020). All vegetated areas within the Subject Land were surveyed.

2.3 Threatened Fauna Survey Methods

Threatened fauna were recorded opportunistically however, their habitats (e.g. waterbodies, rocky areas, tree hollows), were targeted during the parallel field traverses. Potential habitat constraints within the broader area (500m buffer) were assessed using Google Earth, soil landscape mapping (NSW DCCEEW, 2025d) and recent vegetation mapping (NSW DCCEEW, 2025b).

3. EXISTING ENVIRONMENT

3.1 Rivers, streams, estuaries and wetlands

One manmade drain watercourse occurs within the Subject Land bisecting sites J2-012, J4-004, J2-009 and J2-010.

3.2 Habitat Connectivity

Negligible terrestrial habitat connectivity exists between the Subject Land and the broader landscape due to historical clearing and existing infrastructure (e.g. roads, railway and built areas)(**Figure 5** - **Figure 7**).

The Subject Land may provide mobile species with minor refuge while moving throughout the landscape, however due to the degraded condition of the vegetation, it is not considered likely that threatened species would be reliant on this area as a part of their life cycle.

3.3 Karst, Caves, Crevices, Cliffs, Rocks or Other of Geological Features of Significance

The Subject Land did not contain any areas of geological significance, such as karsts, caves, cliffs or crevices. The Subject Land was not mapped as occurring on acid sulfate soils nor mapped as having risk/ probability of exhibiting occurrence of acid sulfate soils.

3.4 Areas of Outstanding Biodiversity Value

No Areas of Outstanding Biodiversity Value occur on the Subject Land or the surrounding area.

3.5 Topography, Geology and Soils

The Subject Land is mapped as occurring on the 'Currajong' soil landscape', characterised by, gentle to undulating footslopes and colluvial plains formed on Quaternary colluvium derived from Silurian granites. The Subject Land occurs on gently inclined terrain, ranging from 304m above sea level (asl) at J2-010 to 320m asl at J6-007 (Google Earth).

3.6 Mapped Native Vegetation Communities – NSW State Vegetation Type Map

The NSW State Vegetation Type Map (NSW DCCEEW, 2024b) indicated the absence of PCTs within or adjoining, the Subject Land (**Figure 4**). The Subject Land has been mapped as 'Not classified'.

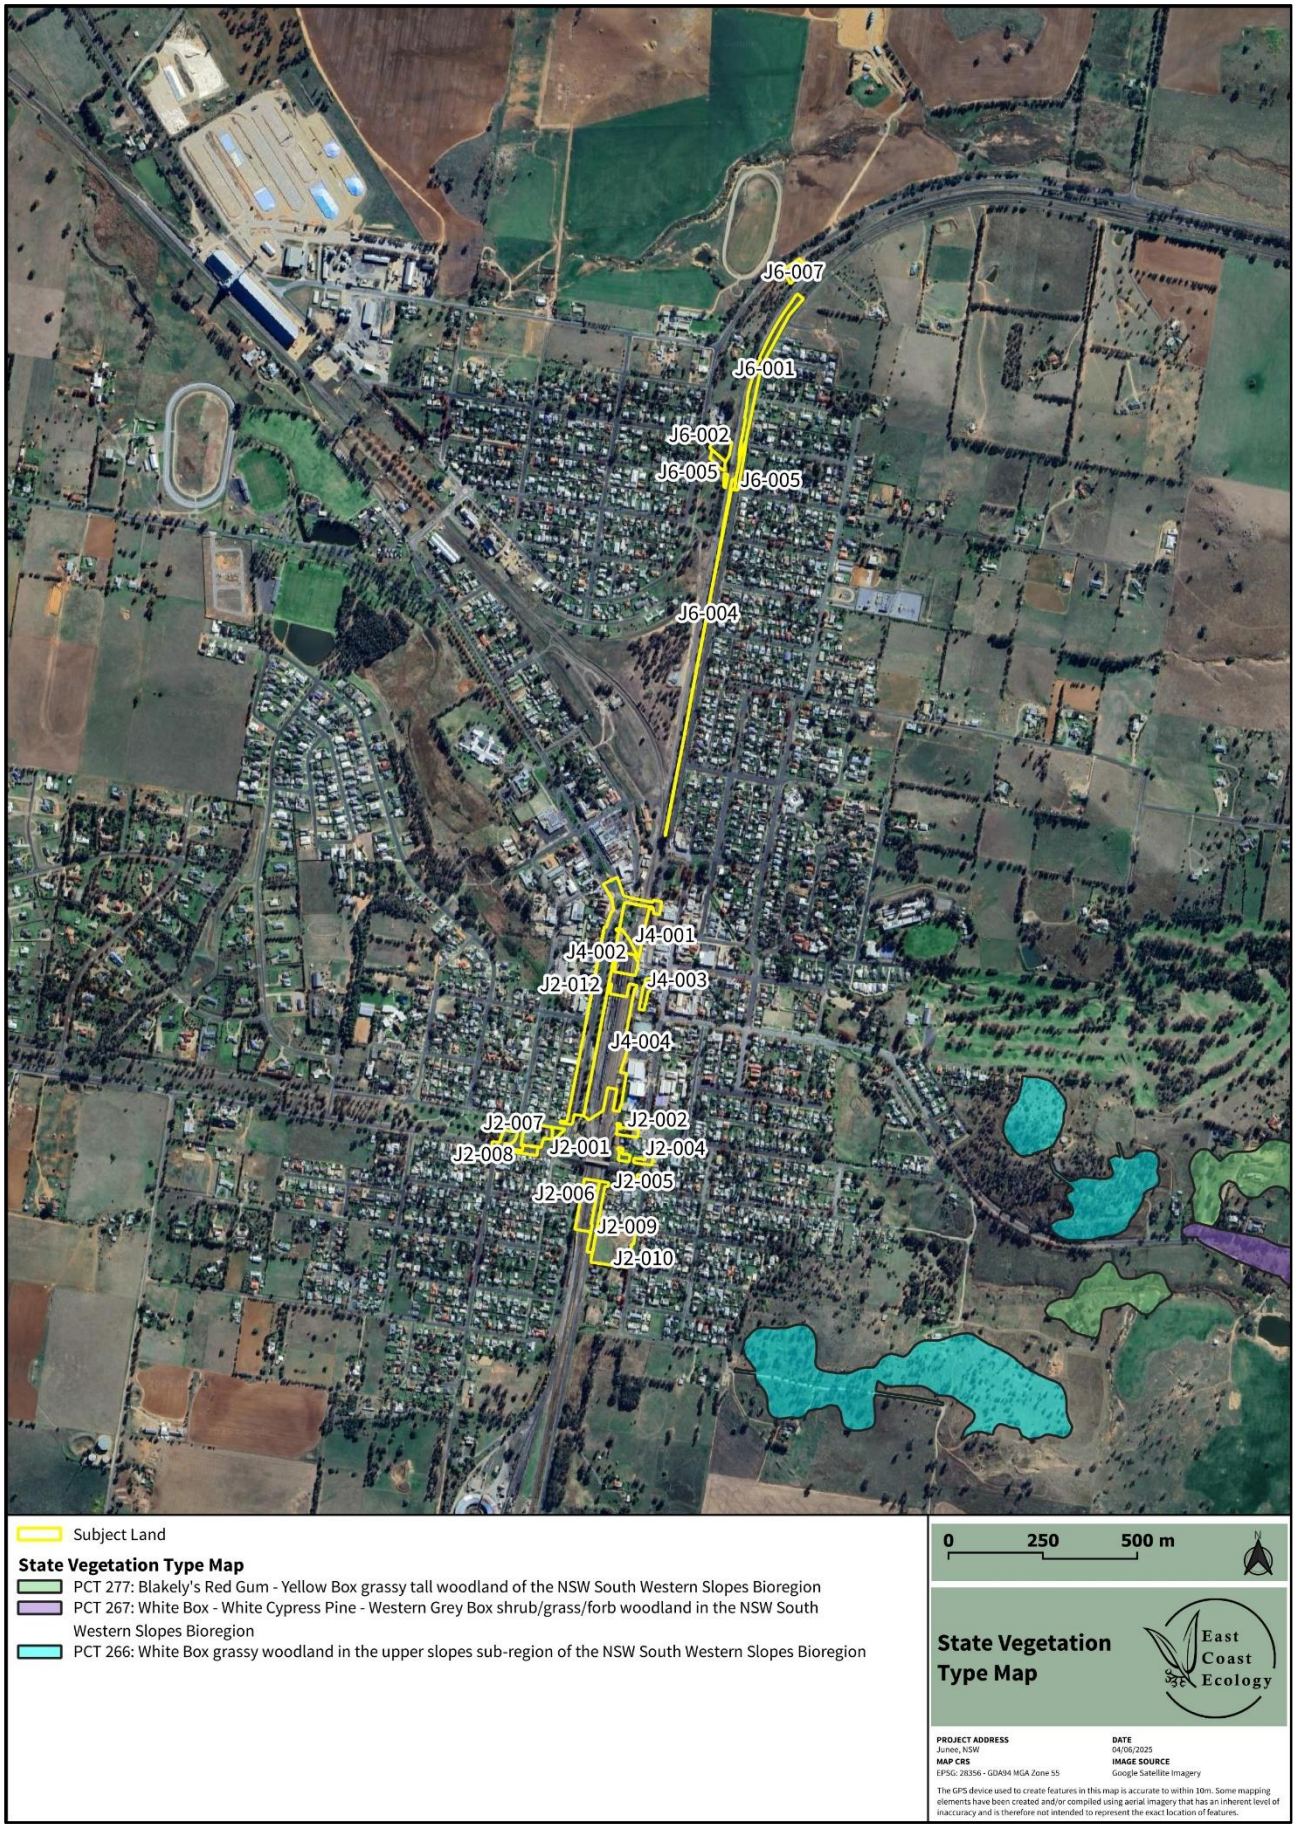

Figure 4. State Vegetation Type Map.

4. RESULTS

4.1 Vegetation Communities.

Due to historical agricultural, infrastructure, residential and industrial development within the Subject Land, and specifically a lack of native and/ or diagnostic species for candidate PCTs, the following vegetation community types described by WSP (2024) were assigned:

- Miscellaneous Ecosystems – 'Ornamental Plantings',
- Miscellaneous Ecosystems – 'Highly Disturbed areas with no or limited Native Vegetation', and
- Poor Condition - PCT 277: Blakely's Red Gum - Yellow Box grassy tall woodland of the NSW South Western Slopes Bioregion.

These vegetation community types are consistent with vegetation types described in the approved BDAR.

Table 1. Vegetation communities identified within the Subject Land.

Community Name	Area within the Subject Land (ha)
Miscellaneous Ecosystems – Ornamental Plantings	1.31ha
Miscellaneous Ecosystems – Highly Disturbed areas with no or limited Native Vegetation	3.57ha
Poor Condition - PCT 277: Blakely's Red Gum - Yellow Box grassy tall woodland of the NSW South Western Slopes Bioregion	0.061ha (No Impact)
Total Area	**4.94ha**

4.1.1 Community type Miscellaneous Ecosystems – Ornamental Plantings

Due to the Subject Land's historical and ongoing residential and community use through the Town of Junee, much of the vegetation is comprised of ornamental native and exotic species planted for aesthetic purposes and was therefore determined to have limited ecological function (WSP, 2024) (**Figure 5** - **Figure 7**) Ornamental Plantings includes areas that are not consistent with the definition of a PCT and are not required to be assessed for ecosystem credits, per Section 9.3 of the BAM (DPE, 2020a).

4.1.2 Community type Miscellaneous Ecosystems – Highly Disturbed areas with no or limited Native Vegetation

Due to a long history of disturbance from agricultural, infrastructure (rail and road) and industrial use, the Subject Land within the town of Junee is comprised of no or limited native species and is dominated by exotic species, and provides limited ecological function (WSP, 2024) (**Figure 5** - **Figure 7**) Highly Disturbed areas with no or limited native vegetation includes areas that are not consistent with the definition of a PCT and are not required to be assessed for ecosystem credits, per Section 9.3 of the BAM (DPIE, 2020a).

Descriptions of the vegetation types are provided in **Table 2**, **Table 3**, and **Table 4**.

Table 2. Miscellaneous Ecosystems - Ornamental plantings vegetation identified within the Subject Land.

Miscellaneous Ecosystems – Ornamental Plantings	
Novel Vegetation Type	**Miscellaneous Ecosystems – Ornamental Plantings**
	
Extent	1.31ha
Description of vegetation	The vegetation within this zone was comprised of exotic and non-endemic native ornamental plantings. Vegetation was mostly planted in the street verge or nature strip and consisted of, *such as Cenchrus clandestinus, Stenotaphrum secundatum, Melia azedarach, Melaleuca sp., Phoenix canariensis, Washingtonia robusta, Rosa sp., Corymbia citriodora, Quercus robur, Grevillea robusta Malus* sp., *Erigeron bonariensis, Chloris truncata, Cenchrus clandestinus, Brachychiton populneus* and *Salix sp.*

Table 3. Miscellaneous Ecosystems - Highly Disturbed areas with no or limited Native Vegetation, vegetation identified within the Subject Land.

Miscellaneous Ecosystems - Highly Disturbed areas with no or limited Native Vegetation	
Novel Vegetation Type	**Miscellaneous Ecosystems - Highly Disturbed areas with no or limited Native Vegetation**
	
Extent	3.57ha
Description of vegetation	The vegetation within this zone was heavily comprised of exotic ground cover species such as *Cenchrus macrourus, Cenchrus clandestinus, Chloris Virgata, Panicum sp. Verbena bonariensis, Phalaris aquatica* and *Flaxleaf fleabane.* The regions this vegetation occurred, were almost entirely developed and displayed a long history of disturbance from infrastructure such as roads, rail, carparks and concrete footpaths.

Table 4. Poor Condition - PCT 277: Blakely's Red Gum - Yellow Box grassy tall woodland of the NSW South Western Slopes Bioregion

Poor Condition - PCT 277: Blakely's Red Gum - Yellow Box grassy tall woodland of the NSW South Western Slopes Bioregion	
Vegetation Type	**Poor Condition - PCT 277: Blakely's Red Gum - Yellow Box grassy tall woodland of the NSW South Western Slopes Bioregion**
	
Extent	0.061ha (No Impact)
Description of vegetation	The vegetation within this zone was heavily modified with few individual remnant *Eucalyptus albens, Eucalyptus melliodora* and *Acacia* sp.

Figure 5. Field-validated Vegetation Communities (Map 1 of 3).

Figure 6. Field-validated Vegetation Communities (Map 2 of 3).

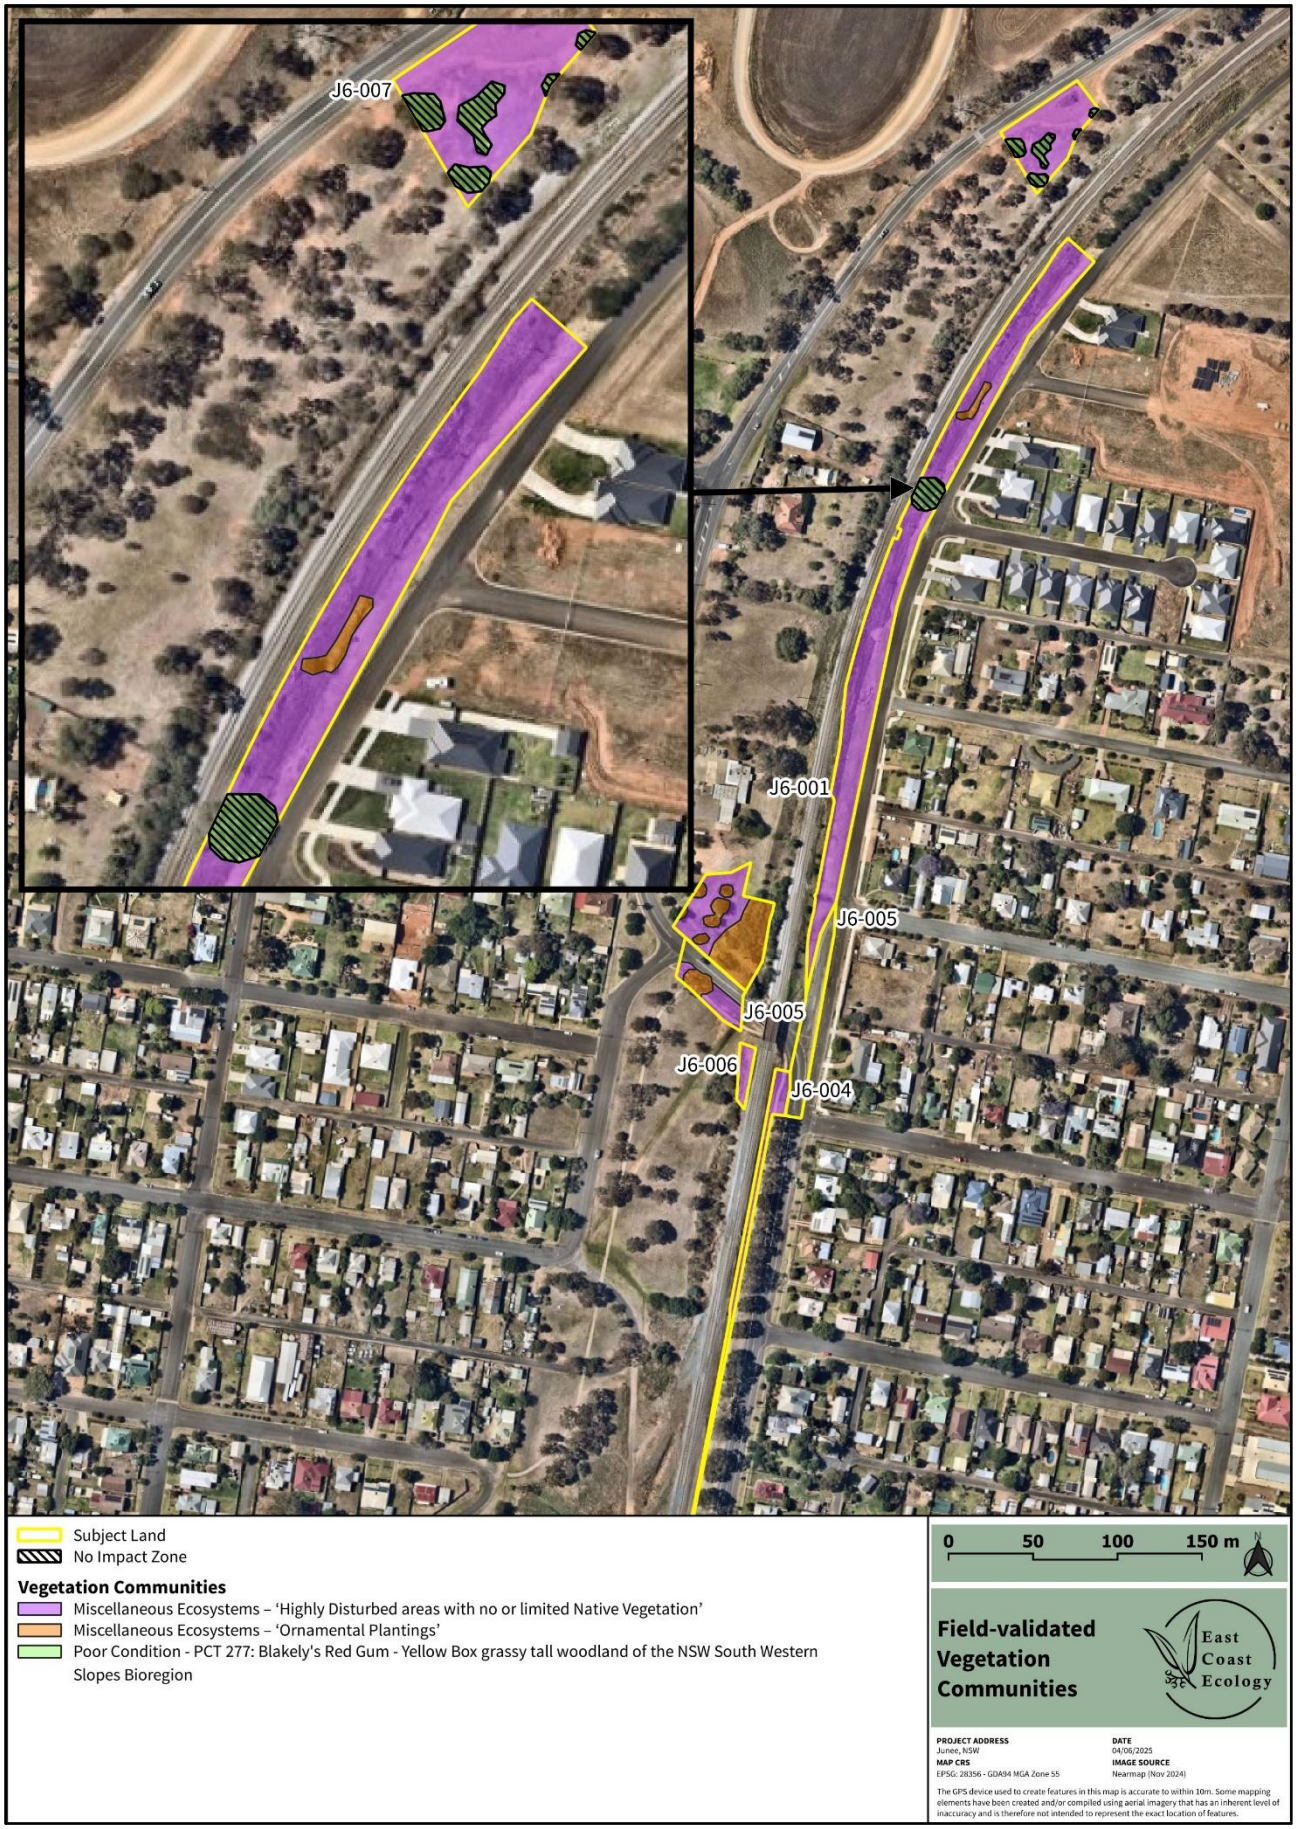

Figure 7. Field-validated Vegetation Communities (Map 3 of 3).

4.2 Threatened Flora

BioNet and PMST searches revealed seven threatened flora species occur, or have potential to occur, within a ~5km radius of the Subject Land.

Table 5. Threatened flora with potential to occur within the Subject Land.

Scientific Name	Common Name	BC Act	EPBC Act	Records within 5km
Austrostipa wakoolica	Wakool Spear-grass	E	E	Modelled Only
Caladenia arenaria	Sand-hill Spider-orchid	E	E	Modelled Only
Caladenia concolor	Crimson Spider-orchid	E	V	Modelled Only
Lepidium aschersonii	Spiny Peppercress	V	V	Modelled Only
Prasophyllum petilum	Tarengo Leek Orchid	E	E	Modelled Only
Swainsona murrayana	Slender Darling-pea	V	V	Modelled Only
Vincetoxicum forsteri	-	V	E	Modelled Only

V – Vulnerable; E – Endangered; EP – Endangered Population; CE – Critically Endangered

The results from the site assessment, including targeted flora surveys and habitat assessment, were used to assess each species' likelihood of occurrence within the Subject Land. After carrying out the assessment, the assessor determined that the habitat is substantially degraded such that all potential threatened flora species are unlikely to occur within the Subject Land.

4.3 Threatened Fauna

BioNet and PMST searches revealed 30 threatened fauna occur, or have potential to occur, within a ~5km radius of the Subject Land.

Table 6. Threatened fauna with potential to occur within the Subject Land.

Scientific Name	Common Name	BC Act	EPBC Act	Records within 5km
Anseranas semipalmata	Magpie Goose	V	-	3
Anthochaera phrygia	Regent Honeyeater	E	CE	1
Aphelocephala leucopsis	Southern Whiteface	V	V	1
Aprasia parapulchella	Pink-tailed Worm-lizard	V	V	Modelled Only
Botaurus poiciloptilus	Australasian Bittern	E	E	2
Calidris acuminata	Sharp-tailed Sandpiper	-	V	Modelled Only
Circus assimilis	Spotted Harrier	V	-	2
Climacteris picumnus victoriae	Brown Treecreeper (south-eastern)	V	V	Modelled Only
Epthianura albifrons	White-fronted Chat	V	-	11

Scientific Name	Common Name	BC Act	EPBC Act	Records within 5km
Falco hypoleucos	Grey Falcon	-	V	Modelled Only
Falco subniger	Black Falcon	V	-	4
Grantiella picta	Painted Honeyeater	-	V	Modelled Only
Hieraaetus morphnoides	Little Eagle	V	-	14
Hirundapus caudacutus	White-throated Needletail	-	V	Modelled Only
Lathamus discolor	Swift Parrot	E	CE	1
Lophochroa leadbeateri leadbeateri	Major Mitchell's Cockatoo	V	E	Modelled Only
Melanodryas cucullata cucullata	South-eastern Hooded Robin	E	E	Modelled Only
Neophema chrysostoma	Blue-winged Parrot	V	V	Modelled Only
Neophema pulchella	Turquoise Parrot	V	-	1
Nyctophilus corbeni	Corben's Long-eared Bat	V	V	Modelled Only
Petroica boodang	Scarlet Robin	V	-	2
Petroica phoenicea	Flame Robin	V	-	7
Phascolarctos cinereus	Koala	E	E	Modelled Only
Polytelis swainsonii	Superb Parrot	V	V	9
Polytelis swainsonii	Superb Parrot	V	V	Modelled Only
Pomatostomus temporalis temporalis	Grey-crowned Babbler (eastern subspecies)	V	-	1
Pteropus poliocephalus	Grey-headed Flying-fox	V	V	11
Rostratula australis	Australian Painted Snipe	E	E	Modelled Only
Stagonopleura guttata	Diamond Firetail	V	V	2
Tringa nebularia	Common Greenshank	E	E	2

V – Vulnerable; E – Endangered; EP – Endangered Population; CE – Critically Endangered

The degraded vegetation within the Subject Land would only provide low-quality foraging habitat for threatened species. There was no breeding habitat identified (in the form of hollow-bearing trees, rocky outcrops/ caves, waterbodies, large trees or human-made structures).

Due to the absence of suitable habitat constraints and/ or the degraded nature of potential habitat and historical clearing, it was determined that the habitat is substantially degraded such that potential threatened fauna are unlikely to utilise the Subject Land.

4.4 Migratory Species

Database searches revealed seven migratory terrestrial species, or their habitat, are known to occur within the Subject Land (**Table 7**). These species are unlikely to occur due to the lack of suitable habitat in the Subject Land (i.e. ornamental tree dominated) and these species do not breed in Australia.

Table 7. Migratory terrestrial species with potential to occur in the Subject Land.

Species	EPBC Act Status
Actitis hypoleucos (Common Sandpiper)	Migratory, CAMBA, JAMBA, ROKAMBA
Calidris acuminata (Sharp-tailed Sandpiper)	Migratory, CAMBA, JAMBA, ROKAMBA
Calidris ferruginea (Curlew Sandpiper)	Critically Endangered, Migratory, CAMBA, JAMBA, ROKAMBA
Calidris melanotos (Pectoral Sandpiper)	Migratory, JAMBA, ROKAMBA
Gallinago hardwickii (Latham's Snipe)	Vulnerable, Migratory, JAMBA, ROKAMBA
Hirundapus caudacutus (White-throated Needletail)	Vulnerable, Migratory, CAMBA, JAMBA, ROKAMBA
Motacilla flava (Yellow Wagtail)	Migratory, CAMBA, JAMBA, ROKAMBA

CAMBA = China-Australia Migratory Bird Agreement, JAMBA = Japan-Australia Migratory Bird Agreement, ROKAMBA = Republic of Korea-Australia Migratory Bird Agreement and Bonn = Convention on the Conservation of Migratory Species of Wild Animals

5. IMPACT SUMMARY

The proposed activity will require the removal/ trimming of:

- 1.31ha of Miscellaneous Ecosystems - Ornamental Plantings, and
- 3.57ha of Miscellaneous Ecosystems - Highly Disturbed areas with no or limited Native Vegetation.

An area of 0.061ha has been assigned as Poor Condition - PCT 277: Blakely's Red Gum - Yellow Box grassy tall woodland of the NSW South Western Slopes Bioregion and will not be impacted by the proposed activity.

All vegetation proposed for removal provides low-quality foraging habitat for threatened fauna. Within the context of the surrounding landscape, it is unlikely this vegetation would be utilised given the presence of superior habitats adjoining the Subject Land, and in the broader landscape. Further, it is considered unlikely that any threatened species would occupy the Subject Land due to evidence of ongoing disturbance (railway, roads, residential housing). As such, no threatened flora or fauna are likely to be significantly impacted.

6. LEGISLATION

6.1 Matters of National Environmental Significance

Under the EPBC Act, a proponent must not take an action if that action will have, or is likely to have, a significant impact on matters protected under the EPBC Act, referred to as MNES. The EPBC Act identifies eight MNES:

- World Heritage properties
- National Heritage places
- Wetlands of international importance (those listed under the Ramsar Convention)
- Listed threatened species and communities
- Migratory species listed under international agreements
- Great Barrier Reef Marine Park
- Commonwealth marine areas
- Nuclear actions

The PMST identified the following as potentially occurring within the Subject Land or surrounding area:

- 3 Threatened Ecological Communities
- 40 Threatened species
- 7 Migratory species

No MNES have been identified in or adjoining the Subject Land.

6.2 State Environmental Planning Policy (Resilience and Hazards) 2021

The State Environmental Planning Policy (Resilience and Hazards) 2021 (Resilience and Hazards SEPP) commenced on the 1st of March 2022 and replaces the following former SEPPs:

- State Environmental Planning Policy (Coastal Management) 2018
- State Environmental Planning Policy 33 – Hazardous and Offensive Development, and
- State Environmental Planning Policy 55 – Remediation of Land.

The Subject Land is not situated within the 'Coastal Zone' therefore this SEPP does not apply.

6.3 *Fisheries Management Act 1994*

The FM Act aims to conserve, develop, and share the fishery resources of NSW for the benefit of present and future generations including conserving fish stocks and key fish habitats and promoting ecologically sustainable development.

The proposed activity does not require works within mapped KFH, nor did threatened aquatic species or marine vegetation protected under the FM Act occur within the Subject Land. As such, the activity would not impact upon KFH, nor are there any legislative requirements or notifications required under this Act.

6.4 *Biosecurity Act 2015*

The *Biosecurity Act 2015* (NSW) provides a framework for the prevention, elimination and minimisation of biosecurity risks posed by an activity as a matter of biosecurity. As defined in Part 3, section 23 of this Act, any non-conformance by an individual is defined as guilty of an offence. One priority weed was identified within the Subject Land at the time of the survey:

- *Salix nigra* (Black Willow)

All priority weeds are to be appropriately managed in accordance with the *Biosecurity Act 2015*.

7. MANAGEMENT MEASURES AND IMPLEMENTATION

The potential impacts on biodiversity identified for the Proposed Change can be appropriately managed in accordance with the Conditions of Approval and through implementation of the updated management measures outlined in the Preferred Infrastructure Report Submissions Report for the Project.

8. CONCLUSION

The proposed activity will require the removal/ trimming of:

- 1.31ha of Miscellaneous Ecosystems - Ornamental Plantings, and
- 3.57ha of Miscellaneous Ecosystems - Highly Disturbed areas with no or limited Native Vegetation.

No impacts to threatened species, populations or ecological communities are expected as a result of the proposed activity.

Although outside the assessed construction boundary for the Project, the biodiversity impacts are considered consistent with the initial assessment (WSP, 2024), and no further offsets (ecosystem or species) would be required.

If you have any queries, please feel free to contact me.

Sincerely,

Alex Graham *BSc (Biology), Grad Dip (Bushfire Protection)*
Director/ Principal Ecologist - Accredited Biodiversity Assessor (BAAS19040)
E: alex.graham@ececology.com.au

Appendix D Unexpected Finds Procedure (Heritage and Human Remains)

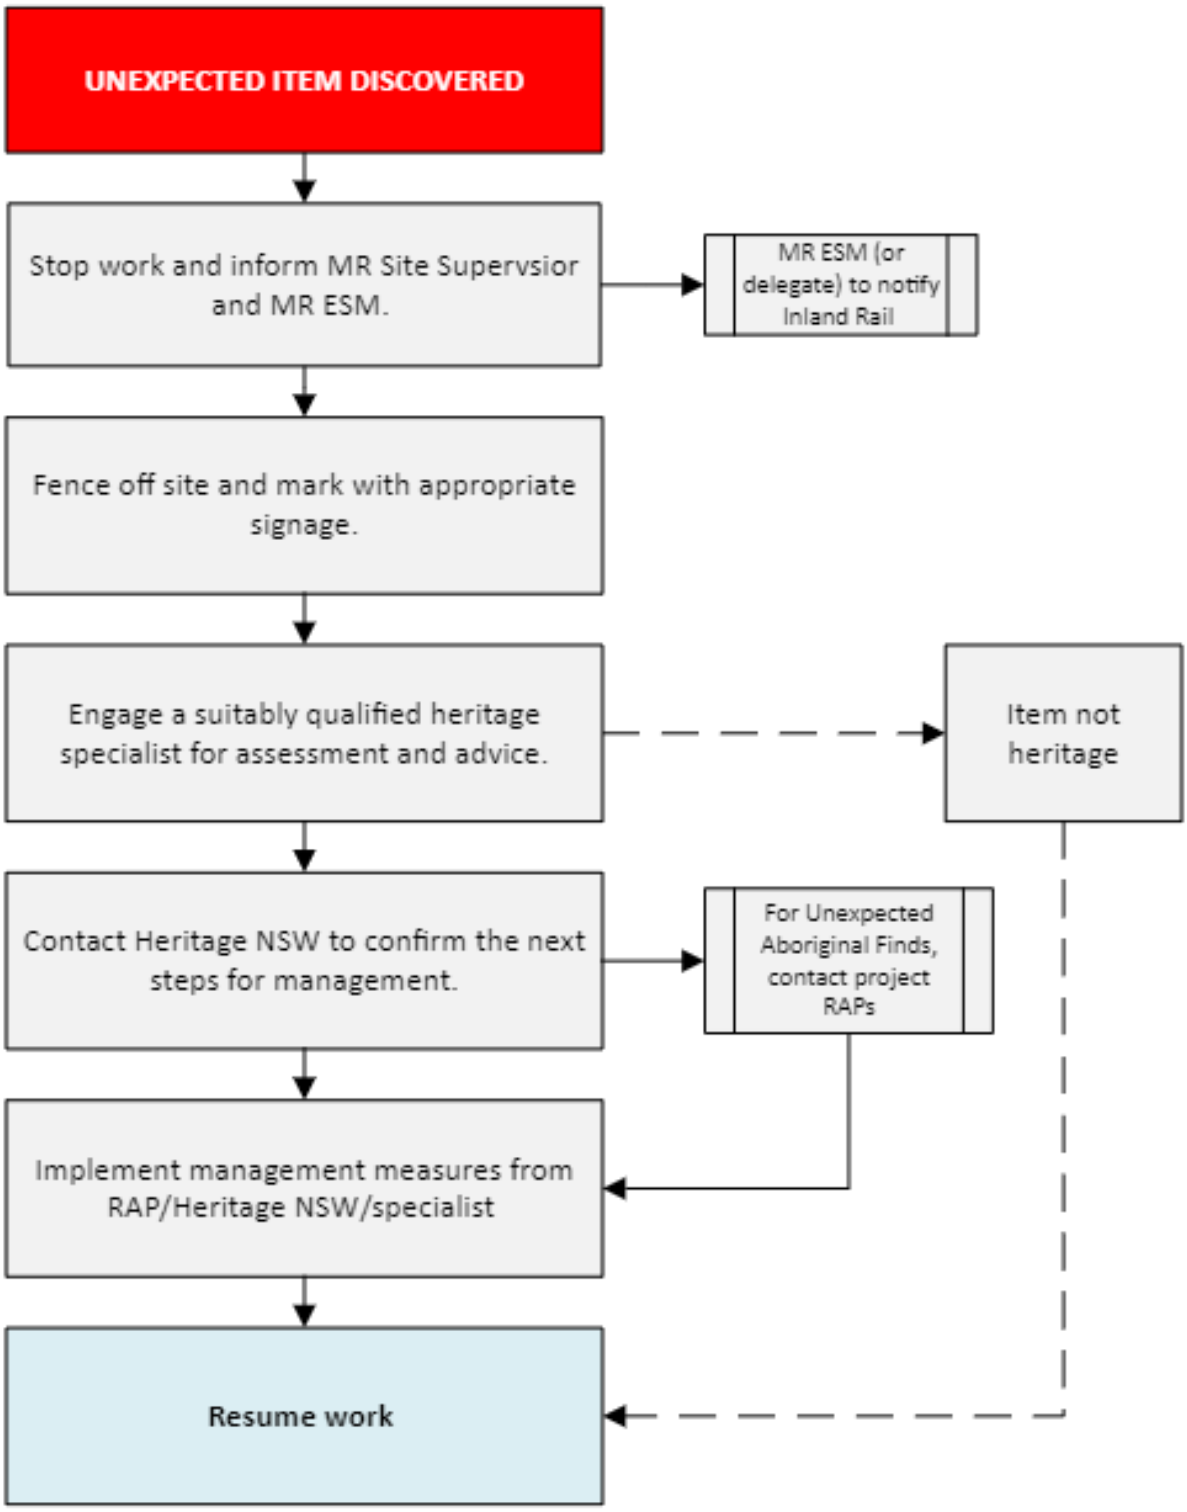

ABORIGINAL AND NON-ABORIGINAL HERITAGE: UNEXPECTED FINDS PROCEDURE

An Aboriginal artefact is anything that is the result of past Aboriginal activity. This includes stone (artefacts, rock engravings etc.), plant (culturally scarred trees) and animal bone (if showing signs of modification; i.e. smoothing, use). Human bone (skeletal remains) may also be uncovered while onsite.

A historic artefact is anything that is the result of past activity not related to Aboriginal occupation. This includes pottery, wood, glass and metal objects as well as the built remains of structures, sometimes heavily ruined.

In the event of an unexpected heritage find, the following protocol will apply:

1. All ground-disturbance work in the vicinity of the find must cease immediately. The Site Supervisor is to be made aware of the object(s) and is to notify the MR Construction Manager and MR ESM. The MR ESM (or delegate) will notify the relevant Inland Rail (IR) representative.
2. The find will be temporarily fenced off as quickly as possible to ensure no damage/further damage to the object(s). Signage on the fencing is to state that the area is subject to environmental protection, that no ground disturbance is allowed, and should include relevant contact details for the MR ESM.
3. The MR ESM (or delegate) will contact a suitably qualified heritage specialist to assess the find. The heritage specialist will then determine the need for further investigation or management. The heritage specialists assessment may be undertaken using good quality images, with a scale and several angles, however, if photographic evidence does not allow for certainty, then a site visit from the suitably qualified heritage specialist will be required.
4. If the find is an Aboriginal object, the MR ESM (or delegate) and/or heritage specialist will contact the RAPs to attend the site to inspect the find and to determine, in consultation, the next steps for management. These measures will include registration of the object in the Aboriginal Heritage Information Management System within a reasonable time.
5. The MR ESM (or delegate) and/or heritage specialist will also contact Heritage NSW (phone 02 9873 8500) to confirm the next steps for management.
6. Ground disturbance work in the vicinity of the find can only continue under supervision of a suitably qualified heritage specialist, having regard to any advice from Heritage NSW and RAPs.

Flow Chart: Unexpected heritage finds

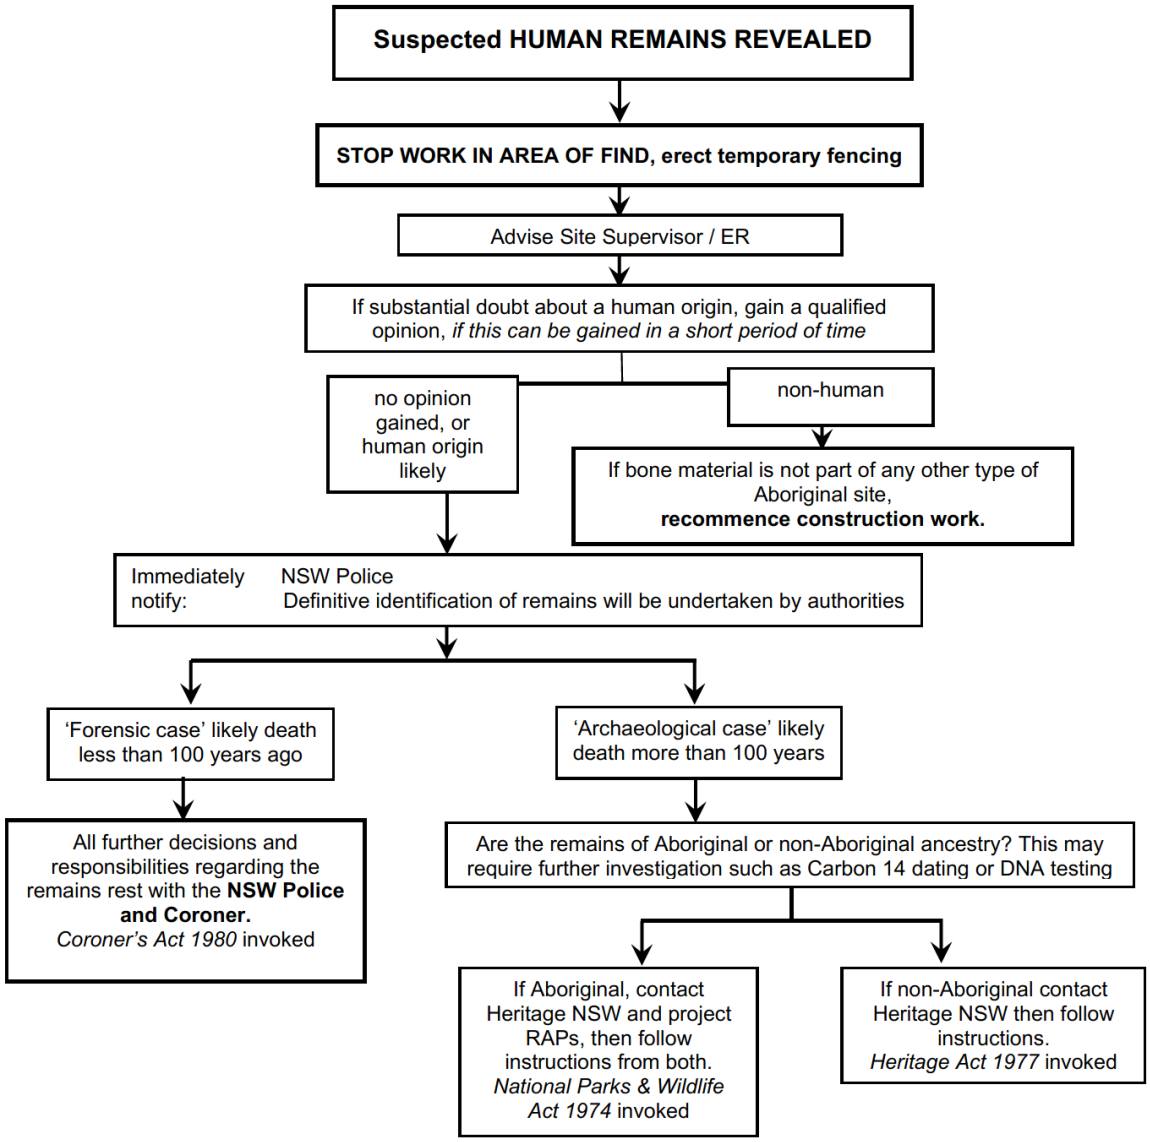

UNEXPECTED HUMAN REMAINS PROCEDURE

The procedure related to the discovery of suspected human skeletal material is based on Requirement 25 of the *Code of Practice for Archaeological Investigation of Aboriginal objects in NSW* (DECCW 2010b) and the *Skeletal Remains: Guidelines for the management of human skeletal remains under Heritage Act 1977* (NSW Heritage Office1998). A flow chart is supplied below.

If known, or suspected skeletal remains are encountered during the construction and/or operation of the project, the following procedure will be followed:

1. The area will be temporarily fenced immediately to ensure no damage/further damage to skeletal material. No skeletal material that remains in place should be disturbed from its location;
2. Works in the vicinity are to be stopped immediately;
3. The Site Supervisor is to be made aware of the skeletal material and is to notify the MR Environmental Manager and MR Construction Manager. Inland Rail Representatives are to be contacted at this stage;
4. Attempt to determine if the bones are animal or human. May require photos of the bones to be sent to the MR Heritage Consultant to determine if the remains are likely to be human or not;
5. If a qualified opinion concludes the bones are not human in origin and are unlikely to be part of an archaeological site works may recommence;
6. If no qualified opinion can be gained or the bones are suspected of being human, undertake the following:
    i) MR will contact Police, allowing Police to conduct an assessment to determine if the remains are part of a forensic case (less than 100 years old), or are archaeological (more than 100 years old);
    ii) If the remains are assessed as ‘archaeological’, there then needs to be an attempt to determine if they are Aboriginal or non-Aboriginal;
    iii) Inland Rail will contact the relevant stakeholders, including Heritage NSW (phone 02 9873 8500) and RAPs (if the remains are Aboriginal);
    iv) All further activities will be determined by Heritage NSW and the RAPs (if the remains are Aboriginal);
    v) No work may recommence in the area of the find until Heritage NSW provides the approval to do so.

Flow Chart: Suspected Human remains

Appendix E Unexpected Finds Procedure (Flora and Fauna)

Discovery of unexpected threatened entity i.e.
(a) any additional impact to threatened species or ecological communities that were included in the assessment but have been found at a new location
(b) to any threatened entity that was not offset.

Stop all work which is likely to impact on the threatened entity.
The person who discovered the find is to notify all project personnel woking in the immediate vicinity of the find(s) so that any potential disturbance activity can be halted.

Notify Site Supervisor and Environmental Manager

All personnel

Notify and consult the project ecologist and install deliniation (for flora and/ or fauna habitat)
Project ecologist to confirm if the threatened entity would be potentially impacted and confirm appropriateness of deliniation/ initial measures.

Is the species or community a listed threatened entity under State or Commonwealth legislation?

No

Yes

Has impact to the species or community in that location been assessed in the EAD and will the absolute clearing extent be within the restrictions posed by Condition E23?

Yes

The impact to the species or community was a assessed by the EAD and is permissible in that location (Any conditions of the Infrastructure Approval must also be considered). **The impact is therefore permissible**

Notify DPHI and BCS in writing on any additional mitigation measures to be implemented

No

The impact to the species or community was NOT addressed in the EAD , follow up investigation is required

Martinus Rail to consult with the Project Ecologist and ARTC when developing actions to assess and manage the find.

For EPBC Act species (and as required under the BC Act) conduct and assessment of significance and review controls to mitigate impacts. Where relevant consider additional controls to minimise impacts to the unexpected find

Consult with DPHI/BCS as relevant regarding propsed measures, impacts and follow up actions

Record find and follow up actions

Confirm with DPHI/BCS (as relevant) that proposed controls are adequate to proceed.

Records of the find to be submitted to BioNet.

Biodiversity assessment to be prepared and implemented (or alternatively the BDAR is to be updated with new impacts) and additional approval documents to be prepared as required.

Measures which can be implemented prior to impact are to be implemented.

Measures required to be implemented at a later date (i.e. any revision to the offsets) with be implemented following impacts

Records of the find to be submitted to BioNet

Martinus Rail Environment Manager or delegate authorises Unexpected Finds Hold Point Release

Recommence works with updated controls where necessary

Appendix F Unexpected Finds Procedure (Contamination)

UNEXPECTED FINDS PROCEDURE

MANAGEMENT AND RESPONSIBILITY

INDUCTION/ TOOLBOX TALKS
All personnel are to receive Project/ Site Inductions and on-going training via Toolbox Talks

All personnel

EVIDENCE OF CONTAMINATION OBSERVED

STOP ALL WORK IN THE AREA IMMEDIATELY AND

PREVENT FURTHER ACTIVITY IN THE AREA.

NOTIFY THE SITE SUPERVISOR AND SAFETY MANAGER , ENVIRONMENT MANAGER AND CORDON OFF AREA.

Site Supervisor
Project Manager
Lead Safety Manager
Environment Manager

- Do not touch or disturb the item/ material
- Delineate the find from the rest of the worksite
- Inform the Environment Manager regarding the potential contamination find. The following detail should be provided:
  - The location of the potential contamination
  - Visual appearance
  - Odour (if any)
  - Depth
  - Surrounding material and works being undertaken at the time of discovering the material
- WHS and EM to determine immediate actions to prevent WHS and ENV issues
- EM to notify IR of Unexpected Find

ASSESSMENT

Contamination Consultant to assess and classify the unexpected find in accordance with the NSW regulatory requirements, including sampling and laboratory analysis.

Contamination Consultant

MANAGEMENT STRATEGY

- Contamination Consultant to develop a provide a plan for managing and/or remediating the material. The strategy may involve a site auditor if required under the relevant CoAs.
- IR/ARTC to review and accept the proposed strategy

Environment Manager
Contamination Consultant
IR/ARTC

STRATEGY IMPLEMENTATION

- Implement the approved management and/or remediation as per the Contamination consultants direction
- IR/ARTC to review and accept the proposed strategy (if required)

Contamination Consultant
Site Supervisor
Environment Manager

Once the contamination find has been mitigated and clearance report received from the contamination consultant. EM is to notify Project Manager who is to approve re-commencement of works in the vicinity of the remediation site.
IR/ARTC will review clearance report and must provide approval/acceptance prior to recommencing works

Project Manager
IR/ARTC

Recommence works

Asbestos

An unexpected find occurs when Asbestos Containing Material (ACM) not identified in the Asbestos Register is found on site. In the event of an unexpected find the below steps are to be followed:

1. The area is to be demarcated, works in the area to cease and workers notified
2. Notify the Site Supervisor first. Site Supervisor will then notify the Project Manager, Safety Manager and Environment Manager.
3. Notify IR/ARTC within five (5) business days after the discovery.
4. Control dust by with dust suppression
5. A certified occupational hygienist is to be engaged to provide recommendations to manage the area
6. Occupational hygienist arrange for testing of the suspected ACM and monitoring of the area (if required)
7. The area is to be made safe as per the certified

Contamination Consultant

Works undertaken in relation to Contamination to investigate, assess, remediate or validate remediation or land use suitability shall be undertaken by a suitably qualified person holding valid 'Site Contamination' certification under the Certified Environment Practitioners Scheme (CEnvP) - Environment Institute of Australia and New Zealand or Certified Professional Soil Scientist – Contaminated Site Assessment and Management under the Soil Science Australia Certification Scheme.

With relevant qualifications and experience in keeping with the National Environmental Protection (Assessment of Site Contamination) Measure 1999 Amendment 2013 (ASC NEPM 2013).

Procedure

1) Potential contaminated soil/material encountered during construction activities. STOP ALL WORK AND NOTIFY IMMEDITELY
2) Undertake a site/area contamination investigation. The Environment Manager (EM) is to assess the situation and if considered necessary, commission a suitably qualified contamination specialist to undertake a contamination investigation in the area of the find.
3) The consultation specialists in consultation with the EM will determine the appropriate management measures to be implemented. This may include leaving contamination undisturbed if it does not pose unacceptable risks to human health or the environment, capping of contamination, treatment or offsite disposal. If the material is to be disposed of offsite, ensure the waste facility is appropriately licensed. Contaminated material requiring off-site disposal is to be classified in accordance with the Waste Classification Guidelines – Part 1: Classification of Waste, NSW EPA 2014. Maintain records to demonstrate waste material was appropriately managed
4) If the material is determined to be Acid Sulfate Soil (ASS) or Potential Acid Sulfate Soil (PASS), an Acid Sulfate Soil Management Plan would be prepared and implemented in accordance with the Acid Sulfate Soil Manual (Acid Sulfate Soil Management Advisory Committee, August 1998).
5) Prior to any contamination investigation, management or remediation activities appropriate work method documentation encompassing safety and environmental risk management will be prepared for review and approval by the EM and IR
6) If required a Remedial Action Plan (RAP) will be prepared in accordance with legislative requirements
7) If material is to be treated and reused or left in situ ensure appropriate records are maintained and location of material (survey) is undertaken and provided to IR
8) Once the contamination find has been mitigated and clearance report received from the contamination consultant. This report is to be submitted to IR/ARTC for acceptance prior to recommencement of work
9) EM is to notify Project Manager who is to approve re-commencement of works in the vicinity of the remediation site.
