Glossary

Specific terms and acronyms used throughout this strategy are listed and described in the table below.

TERM	DEFINITION
A2I	Albury to Illabo
ACHAR	Technical Paper 2: Aboriginal Cultural Heritage Assessment Report of the EIS
AEP	Annual Exceedance Probability
AHD	Australian Height Datum
AHIMS	Aboriginal Heritage Information Management System Service by Heritage NSW
ARTC	Australia Rail Track Corporation
ASS	Acid Sulfate Soils
BARM	Biodiversity Assessment Report Memo (East Coast Ecology, July 2026)
CA	Consistency Assessment
CEMF	Construction Environmental Management Framework
Change	Macquarie Dictionary: A variation, adjustment, alteration, deviation or transformation to the project scope, construction methodology or design.
CIZ	Construction Impact Zone; The proposed construction area in addition to the approved 'construction boundary'.
CNVIS	Construction Noise and Vibration Impact Statement
CNVIS Addendum	An addendum to the endorsed CNVIS
CoA	Condition(s) of approval
Compatible	Macquarie Dictionary: Capable of existing in harmony. Capable of orderly, efficient integration with other elements in a system.
Consistent	Macquarie Dictionary: Agreeing or accordant; compatible; not self-opposed or self-contradictory; constantly adhering to the same principles, course, etc.
Consistent with	Means that carrying out the project (as approved) will comply with the terms of the approval despite the proposed change. (See Barrick Australia Ltd v. Williams [2009] NSWCA 275)
Construction Boundary	As defined in the Division 5.2 approval, the area physically affected by work as defined in the Project Description as described in the documents listed in CoA A1.
DAWE	*Former* Australian Government Department of Agriculture, Water and Environment.
Division 5.2 Approval	An approval under Division 5.2 of the NSW *Environmental Planning and Assessment Act 1979* for State Significant Infrastructure / Critical State Significant Infrastructure.
EAD	Environmental assessment documentation, as listed in CoA A1.
EIS	Environmental Impact Statement
EMMs	Environmental Management Measures
EP&A Act	*Environmental Planning and Assessment Act 1979*
EPBC Approval	An approval of a controlled action issued by the Australian Government Minister under Section133 of the Commonwealth *Environment Protection and Biodiversity Conservation Act 1999.*
EPL	Environment Protection Licence (#21984)

IRPL	Inland Rail Pty Ltd (subsidiary of ARTC)
Junee Yard	Junee Yard clearances enhancement site
JPHA	Junee Precinct Heritage Assessment (OzArk, July 2026)
LGA	Local Government Area
LoS	Level of Service
MEHD	Miscellaneous Ecosystems – Highly Disturbed
MEOP	Miscellaneous Ecosystems – Ornamental Plantings
MR	Martinus Rail
NCA	Noise Catchment Area
NML	Noise Management Level
PCT	Plant Community Type
PIR	Preferred Infrastructure Report
PIR RtS	Preferred Infrastructure Report Response to Submissions report
Proposed Change	The construction change which is the subject of this consistency assessment (extension of the CIZ within Junee precinct.
Rail Corridor	Land that is: (a) owned, leased, managed or controlled by a public authority for the purpose of a railway or rail infrastructure facilities, or zoned under an environmental planning instrument predominantly; or (b) solely for development for the purpose of a railway or rail infrastructure facilities.
Sensitive Receivers	Includes residences, educational institutions (including preschools, schools, universities, TAFE colleges), health care facilities (including nursing homes, hospitals), religious facilities (including churches), childcare centres and passive recreation areas (including outdoor grounds used for teaching). Receivers that may be considered to be sensitive include commercial premises including film and television studios, research facilities, entertainment spaces, temporary accommodation such as caravan parks and camping grounds, restaurants, office premises, and retail spaces), and industrial premises as identified by the Planning Secretary.
SLR Predict	A2I noise and vibration management tool
SSI	State Significant Infrastructure
TGS	Traffic Guidance Scheme
TOL	Temporary Occupation Licence
T	Tonnes
UMM	Updated Mitigation Measure(s)

1 Introduction

1.1 Background

1.1.1 Division 5.2 approval

Australian Rail Track Corporation (ARTC) prepared an environmental impact statement for the Inland Rail – Albury to Illabo project (EIS) which was placed on public exhibition from 17 August 2022 to 28 September 2022. The EIS identified a range of environmental, social and planning issues associated with the construction and operation of the Albury to Illabo project and proposed measures to mitigate and manage those potential impacts.

In accordance with section 5.17(6)(b) of the EP&A Act, on 13 April 2023 the Planning Secretary directed ARTC to submit a Preferred Infrastructure Report (PIR) that provides further assessment of traffic and transport, noise and vibration, and air quality impacts. The PIR was also prepared to consider changes to the exhibited project that have arisen as a consequence of these further assessments and related submissions.

The Inland Rail – Albury to Illabo project was assessed as part of the following environmental assessment documentation (EAD):

- Inland Rail – Albury to Illabo Environmental Impact Statement (ARTC, August 2022)
- Albury to Illabo Response to Submissions (ARTC, November 2023)
- Albury to Illabo Preferred Infrastructure Report (ARTC, November 2023)
- Albury to Illabo Preferred Infrastructure Report Response to Submissions (ARTC, February 2024)
- Inland Rail – Albury to Illabo (SSI-10055) Response to request for additional information – Air Quality Assessment (letter dated 1 May 2024)
- Part 1 - Revised Technical Paper 8: Biodiversity Development Assessment Report (WSP, February 2024)
- Part 2 - Revised Technical Paper 8: Biodiversity Development Assessment Report (WSP, February 2024)

The Minister for Planning and Public Spaces approved the Albury to Illabo project (the Project) under section 5.19 of the *Environmental Planning and Assessment Act 1979* (EP&A Act) on 8 October 2024. The instrument of approval incorporated the Minister's Conditions of Approval.

For the purpose of this consistency assessment, the approval issued by the NSW Minister for Planning and Public Spaces for the Project is referred to as the Division 5.2 approval.

1.1.2 EPBC Act referral

The proposal was referred to the Australian Government Minister for the Environment under the Commonwealth *Environment Protection and Biodiversity Conservation Act 1999* (EPBC Act) due to potential for impacts on protected matters on 2 June 2020 (EPBC Referral No 202/8670). On 29 June 2020, the Australian Government Department of Agriculture, Water and Environment (DAWE) notified that the proposal is not a controlled action, and hence approval under the EPBC Act is not required.

1.1.3 Project changes

The Project has been subject to a modification under section 5.25 of the EP&A Act:

- Inland Rail Albury to Illabo Modification 1 Kemp Street Bridge, Junee (SS-10055-Mod-1)

The following consistency assessments have been prepared to support the undertaking of the Project:

- EIS Consistency Assessment Report (Minor) Kildare Catholic College (MR, April 2025)
- EIS Consistency Assessment Report (Minor) Cassidy Parade and Pearson Cassidy (MR, April 2025)

- EIS Consistency Assessment Report (Small Scale) Wagga Traffic Investigations (MR, May 2025)
- EIS Consistency Assessment Report (Minor) Edmondson Street Utilities (MR, July 2025)
- EIS Consistency Assessment Report (Minor) Edmondson Street Timing (MR, July 2025)
- EIS Consistency Assessment Report (Minor) Diver Platforms Stage B (MR, August 2025)
- EIS Consistency Assessment Report (Minor) Junee Precinct (MR, August 2025)
- EIS Consistency Assessment Report (Minor) Albury Precinct (MR, September 2025)
- EIS Consistency Assessment Report (Minor) Wagga Stage B (MR, September 2025)
- EIS Consistency Assessment Report (Minor) Junee to Illabo Clearances (MR, September 2025)
- EIS Consistency Assessment Report (Minor) Riverina Highway Site Establishment (MR, September 2025)
- EIS Consistency Assessment Report (Minor) Wagga Wagga Traffic Mitigations (MR, October 2025)
- EIS Consistency Assessment Report (Minor) Bomen Yard Construction Boundary Changes (MR, November 2025)
- EIS Consistency Assessment Report (Small Scale) Albury North Signal Hut (MR, November 2025)
- EIS Consistency Assessment Report (Minor) Signalling Scope Stage B (MR, November 2025)
- EIS Consistency Assessment Report (Minor) Culcairn Site Establishment (MR, November 2025)
- EIS Consistency Assessment Report (Minor) The Rock & Table Top Site Establishment (MR, November 2025)
- EIS Consistency Assessment Report (Minor) Uranquinty Supporting Works (MR, November 2025)
- EIS Consistency Assessment Report (Minor) Billy Hughes Bridge Stage B (MR, January 2026)
- EIS Consistency Assessment Report (Minor) Wagga Wagga Precinct Stage B (MR, February 2026)
- EIS Consistency Assessment Report) Minor) Riverina Highway Supporting Works (March 2026)
- EIS Consistency Assessment Report (Minor) Junee to Illabo-Supporting Works (April 2026)
- EIS Consistency Assessment Report (Minor) Wagga Wagga Precinct (April 2016)
- EIS Consistency Assessment Report (Small Scale) Temporary Speed Reduction Signs Installation (April 2026)
- EIS Consistency Assessment Report (Minor) Uranquinty Supporting Works (July 2026)
- EIS Consistency Assessment (Minor) Yerong Creek Supporting Works (August 2026)

1.2 Purpose of consistency assessment

This consistency assessment has been prepared in accordance with the Inland Rail Pty Ltd (IRPL) specification for NSW Consistency Assessments (0-0000-902-EEC-00-SP-0001_1).

The purpose of this consistency assessment is to:

- Describe the Proposed Change relative to the Division 5.2 approval.
- Assess the environmental impacts associated with the Proposed Change relative to the Division 5.2 approval.
- Determine if the Proposed Change is consistent with the Division 5.2 approval or whether further approval is required either for a modification application or a new Project.

2 Proposed Change

2.1 Description of Proposed Change

The EAD identified the indicative proposal sites to enable construction of the reference design for the Albury to Illabo (A2I) section of the Inland Rail program. Further detailed design, construction planning, and site surveys have identified refinements to the construction methodology and resulted in the requirement to adjust the construction boundary as defined in the Division 5.2 approval and described in the EAD.

The Proposed Change would involve adjustments to extending the construction impact zone (CIZ) to support the installation of the crossover replacement at Points 110A and 110B.

Activities within the Proposed Change area relate to ballast tamping and destressing. Access will be via hi-rail and foot only. There will be no parking outside the corridor and no access via public roads.

This Consistency Assessment report (CA) considers the Proposed Change, which involves extending the approved construction boundary. This includes adjustments to the CIZ to allow for adequate space and access for supporting works associated with the wider scope of activities (detailed design) associated with Junee Precinct.

For the purpose of this consistency assessment, the construction boundary, as proposed to be expanded, is referred to as the 'proposed CIZ extension area'. The proposed CIZ extension area falls within the existing rail corridor. The proposed CIZ extension area is shown in greater detail to key environmental constraints in Figure 2-1.

Figure 2-1: Additional area for Proposed Change

2.1.1 Methodology

Chapter 8 of the EIS provides an overview of construction activities for the Project and describes construction activities planned for each of the enhancement sites. The Proposed Change would enable these construction activities to occur and would not introduce additional activities at the Junee Yard clearances site.

Construction activities, including the required plant and equipment, that would be undertaken within the proposed CIZ (by extension of the construction boundary) are considered below.

Work plan

The Proposed Change is required to support the following activities associated with the wider scope of works at Junee Precinct:

Ballast Tamping and Destressing

- Access via hi-rail or on foot only
- On-track ballast tamping works
- Rail destressing works

Plant and equipment

Plant and equipment required for these activities include:

- Ballast Tamper
- Ballast Regulator
- Front End Loader
- Hi-rail Hydrema
- Hi-rail Excavator
- Hi-rail Truck/Trolley
- Water Cart
- Compressor
- Generator
- Rail Saw
- Grinder
- Lighting towers

2.2 Need

The EAD identified the ‘Proposal site area’ consisting each of the enhancement sites to enable construction of the reference design, which forms the construction boundary, as defined in the Division 5.2 approval. Further detailed design and site surveys resulted in the requirement to adjust the approved CIZ to facilitate the scope of works such as ballast tamping and destressing.

The Proposed Change is required for constructability of the Project, which is not adequately considered as part of the reference design in the EIS.

2.3 Location and setting

The Proposed Change relates to the Junee Yard enhancement site, located within the Junee Precinct in the Junee Local Government Area (LGA). Aspect specific location and setting information as it relates to the Proposed Change is contained in the subsections below.

2.4 Construction hours

The works associated with the Proposed Change will be timetabled to be carried out during the approved standard construction hours as per the Project's Environment Protection Licence #21984 (EPL) and CoA E69, where possible. The standard construction hours are as follow:

- 7:00am to 6:00pm Monday to Friday, inclusive,
- 7:00am to 6:00pm Saturday and
- At no time on Sundays or public holidays.

The Proposed Change activities may occur outside of standard construction hours, and the hours approved as part of CoA E69 and EPL L4.1 condition. Any out-of-hours works (OOHW) within the extended CIZ would be implemented in accordance with CoA E71 and EPL L4.3, L4.4, L4.5 and L4.6 conditions.

The activities associated with the Proposed Change would occur from September 2026 until October 2026.

3 Consultation

Inland Rail does not always carry out consultation for consistency assessments. However, in some cases consultation may be carried out to:

- Help identify the nature and scale of the impacts.
- Involve the community in the options considerations for the Proposed Change.
- Manage community expectations for the Project.
- Provide the best design outcome that minimises environmental impacts.

As considered above, Martinus Rail has undertaken ongoing consultation with asset and/or property owners in relation to determining a suitable design and to coordinate construction impacts on existing operational utilities.

Consultation with each of the affected landowners where works are proposed outside the construction boundary would be undertaken prior to commencement of works.

Where vegetation removal is proposed on land not owned by Inland Rail, consultation will be carried out with the property owner including confirming any revegetation/rehabilitation requirements. This will be undertaken in accordance with the Community Communication Strategy (IRPL, 2024), prior to the removal of vegetation.

Where a proposed CIZ extension is subject to the preparation of a land licence/agreement, works will only occur following the approval of that land licence/agreement. Any land licence/agreements required as part of this CA, will be provided to IRPL prior to commencement of works.

The community would be notified in accordance with Section 7.1 of the Community Communication Strategy (IRPL, 2024), including where works may be required outside of the approved construction hours for A2I, prior to commencement of works. Any complaints, feedback or enquiries would be handed in accordance with Section 8 of the Community Communication Strategy.

.

4 Environmental Assessment

4.1 Environmental risk review

An environmental risk review of the proposed activity has been undertaken and is provided below in Table 4.1. Assessments of potential impacts are provided in greater detail for the following environmental aspects:

- Traffic and transport (Section 4.2)
- Noise and vibration (Section 4.3)
- Aboriginal heritage (Section 4.4)
- Non-Aboriginal heritage (Section 4.5)
- Biodiversity (Section 4.6)
- Flood risk (Section 4.7)
- Soils and contamination (Section 4.8)
- Air quality (Section 4.9)
- Landscape and visual (Section 4.10)

Table 4-1: Consistency assessment review

ISSUE	Y/N	NOTES
Are works required outside the IR property acquisition boundary, or land not previously impact on by project works?	Yes	Where works will occur on road reserve these will be carried out through the relevant councils (S138 process). For works occurring outside of the IRPL acquisition boundary, land licence/agreements will be prepared where required. These will be managed by the MR Communications Team (as discussed in Section 3 above).
Will the works result in any changes to form or functionality of the approved project?	No	The Proposed Change would not impact on the form of functionality of the approved project. The Proposed Change is required to improve constructability of the approved Project following detailed design and would involve the same construction activities and operation in the EAD.
Are there any potential impacts on traffic and transport associated with the works?	No	The Proposed Change would not generate any additional construction traffic or parking demand compared with what was assessed in the EAD. Potential traffic and transport impacts are considered in greater detail in Section 4.2.
Are there any potential noise and vibration impacts associated with the works?	Yes	The Proposed Change may result in short-term noise and vibration impacts. Potential noise and vibration impacts are considered in greater detail in Section 4.3.
Are there any potential impacts on known Aboriginal heritage items or sites located in the vicinity of the works?	No	One isolated artefact was identified approximately 695m north of the CIZ extension area, A2I-2. Potential impacts to Aboriginal heritage items are considered in greater detail in Section 4.4.
Are there any potential impacts on non-Aboriginal heritage items or sites located in the vicinity of the works?	Yes	The Proposed Change is located in proximity to known non-Aboriginal heritage items and sites. These impacts are therefore considered in greater detail in Section 4.5.
Are the works within 50m of an EEC or threatened species?	No	A Biodiversity Assessment Report Memo (BARM) for the Proposed Change has been developed. The impacts identified in the BARM are considered in greater detail in Section 4.6.
Do the works require clearing of native vegetation or habitat trees?	No	A Biodiversity Assessment Report Memo (BARM) for the Proposed Change has been developed. The impacts identified in the BARM are considered in greater detail in Section 4.6.
Are the works within 40m of a waterway or water body?	No	One mapped watercourse intersects the Subject Land in the central extent. The Subject Land is therefore associated with a

		riparian buffer zone. Potential impacts to waterways are considered in greater detail in Section 4.6 .
Are the works located on flood prone land?	No	The Proposed Change is not affected by local overland flooding.
Are the works located on bushfire prone land?	No	The Proposed Change is not located on bushfire prone land.
Do the works involve ground disturbance of more than 2 hectares (ha)?	No	The additional construction impact zone required as part of the Proposed Change is under 2 hectares. All works will be undertaken from Hi-rail with no disturbance to the ground surface. Potential soil impacts are considered in greater detail in Section 4.8.
Are the works in an area of known salinity hazard risk?	Yes	The Proposed Change is located in an area of moderate salinity hazard. Potential impacts associated with salinity are discussed in greater detail in Section 4.8.
Are the works in an area of known acid sulfate soil risk?	Yes	The Proposed Change is located in an area of low probability for acid sulfate soils (ASS) occurrence. Potential impacts associated with ASS are considered in greater detail in Section 4.8.
Will works require temporary or permanent placement of surplus spoil material?	No	The Proposed Change would not require temporary placement of surplus spoil material.
Are the works in an area of known contamination risk?	Yes	The Proposed Change is located in an area noted as a general contamination risk. The impacts associated with contamination are discussed in greater detail in Section 4.8.
Are there any potential air quality impacts associated with the works?	Yes	The Proposed Change could result in minor, short-term air quality impacts, which would be consistent with the level of impact considered in the EAD. These impacts are discussed in greater detail in Section 4.9.
Are there any potential landscape and visual impacts associated with the works?	Yes	The Proposed Change would result in potential minor and short-term landscape and visual impacts. These impacts are discussed in greater detail in Section 4.10.
Will works result in any operational impacts further to those detailed in the approved project?	No	The Proposed Change would not represent an increase in operational impact to what was assessed in the approved Project.

4.2 Traffic and transport

4.2.1 Existing environment

The following discussion is drawn from the EAD (EIS, Technical Paper 1).

The Proposed Change is located on land within and adjacent to the existing rail corridor which forms part of the Main South Line in the NSW rail network.

Construction traffic

The Olympic Highway passes through the Olympic Highway underbridge, Junee Yard, and Kemp Street bridge enhancement sites and is a major arterial road that carries a high volume of traffic in the region.

The construction volume for Olympic Highway is assessed as meeting a Level of Service (LoS) A, meaning traffic flow generally remains stable. For Junee Station and surrounds, the assessment shows that with construction traffic all road links are expected to operate at LOS B or better, which is considered stable flow conditions. Key local roads and LoS (including construction traffic) that serve the enhancement sites are summarised in Table 4-2 below.

Table 4-2: Overview of key roads and performance at Junee Precinct

ENHANCEMENT SITE	KEY ROADS	MAXIMUM AND MINIMUM TRAFFIC VOLUMES FOR NON-ARTERIAL ROADS (DAILY TWO-WAY)	LOCAL ROAD PERFORMANCE
Olympic Highway enhancement site	▸ Main Street/Olympic Highway ▸ Illabo Road/ Olympic Highway	▸ Maximum/minimum – 592, 6% heavy vehicles (Illabo Road)	▸ Roads operate with a LoS of A
Junee Yard enhancement sites	▸ Olympic Highway ▸ Seignior Street ▸ Humphreys Street ▸ Main Street ▸ Lorne Street ▸ Peel Street ▸ Railway Lane ▸ Railway Parade ▸ Anzac Avenue	▸ Maximum—2,905, 2% heavy vehicles (Kemp Street) ▸ Minimum— 341, 3% heavy vehicles (Railway Lane, Railway Parade)	▸ Roads operate with a LoS of B or better

4.2.2 Impact Assessment

The Proposed Change would involve adjustments to the construction boundary to enable construction methodology based on detailed design, to support the installation of the crossover replacement at Points 110A and 110B. All activities related to the crossover replacement within the Proposed CIZ extension area will be undertaken within the rail corridor. Access to the site will be via Hi-rail or on foot.

Construction traffic and parking

The Proposed Change would not introduce any additional construction traffic than what has already been assessed as part of the EAD and therefore would not impact the assessed LoS (B or higher) for Olympic Highway, or any of the local roads that provide access to the enhancement sites.

4.2.3 Conclusion

The Proposed Change would not generate any additional construction traffic or parking demand compared with what was assessed in the EAD. No additional impacts to pedestrian and cycle paths are expected as a result of the Proposed Change.

These impacts would be generally in accordance with the impacts considered as part of the EAD and would be managed as per all applicable mitigation measures in the Conditions of Approval (CoAs) and Updated Mitigation Measures (UMMs), with any additional mitigation measures outlined in Table 4-9.

4.3 Noise and vibration

4.3.1 Existing environment

Common noise and vibration sources in the subject area are train movements along the operational rail corridor, major road traffic and local traffic. Potentially sensitive receivers are those that may be affected by changes in noise and vibration levels within the work area. Consistent with the adopted standards and guidelines, sensitive receivers in the work areas include residential dwellings, schools and education institutions, places of worship, childcare centres, medical facilities, commercial property and industrial premises.

The existing vibration environment in close proximity to the railway line includes vibration from existing freight train movements on the alignment. Additional sources of vibration may be associated with operation of industrial premises, road traffic operations and construction activities typical of the environment. Adjacent heritage structures are considered as vibration sensitive receivers due to the potential for cosmetic damage;

however, a heritage structure should not be assumed to be more sensitive to vibration, unless it is structurally unsound as per CoA E41.

Noise catchment area

Noise catchment area (NCA) was defined in the EIS to classify groups of sensitive receivers that are likely to have a similar existing noise environment and experience similar impacts from construction of the Project. These were determined through reference to aerial imagery and land use maps and verified during background noise monitoring.

A Construction Noise and Vibration Impact Statement (Doc No: 6-0052-210-EEC-J4-AS-0001_1) (endorsed CNVIS) has been prepared for the scope of works associates with Junee Yard Precinct. The CNVIS is presented under Appendix A.

An addendum to the endorsed CNVIS (CNVIS ADD1) (Doc No: 6-0052-210-EEC-J4-AS-0001_ADD1_A) has been prepared for the scope of works associated at Junee Yard enhancement site.

The endorsed CNVIS and CNVIS ADD1 (under review) are presented under Appendix A and Appendix B, respectively. The Proposed Change area is surrounded by a combination of residential and commercial receivers. The corresponding NCA, approximate number of receivers and noise management levels (NMLs) are noted in Table 4-3, Table 4-4 and shown in Figure 4-1 below.

Table 4-3: NCAs and background noise information

ENHANCEMENT SITE	NCA ID	APPROXIMATE NUMBER OF RECEIVERS IN NCA	DESCRIPTION	RBL (dBA)		
				Day[1]	Evening[1]	Night[1]
JUNEE YARD PRECINCT	NCA 14	1,935	This is predominately suburban in nature and affected by noise sources including the junction of the main south and western lines, Olympic Highway and local road traffic	42	45	35

Note 1: Time periods defined as - Day: 7am to 6pm Monday to Saturday, 8am to 6pm Sunday; Evening, 6pm to 10pm; Night 10pm to 7am Monday to Saturday, 10pm to 8am Sunday

Table 4-4: NCAs and noise management levels

NCA ID	NOISE MANAGEMENT LEVEL (NML) (LAeq(15minute)-dBA					
	APPROVED HOURS (RBL + 10 dB)	OUT OF HOURS			SLEEP DISTURBANCE SCREENING LEVEL (RBL + 15dB or 52dBA)	SLEEP AWAKENING LEVEL
		DAYTIME (RBL + 5 dB)	EVENING (RBL + 5 dB)	NIGHT-TIME (RBL + 5 dB)		
NCA 14	52	47	47	40	52	65

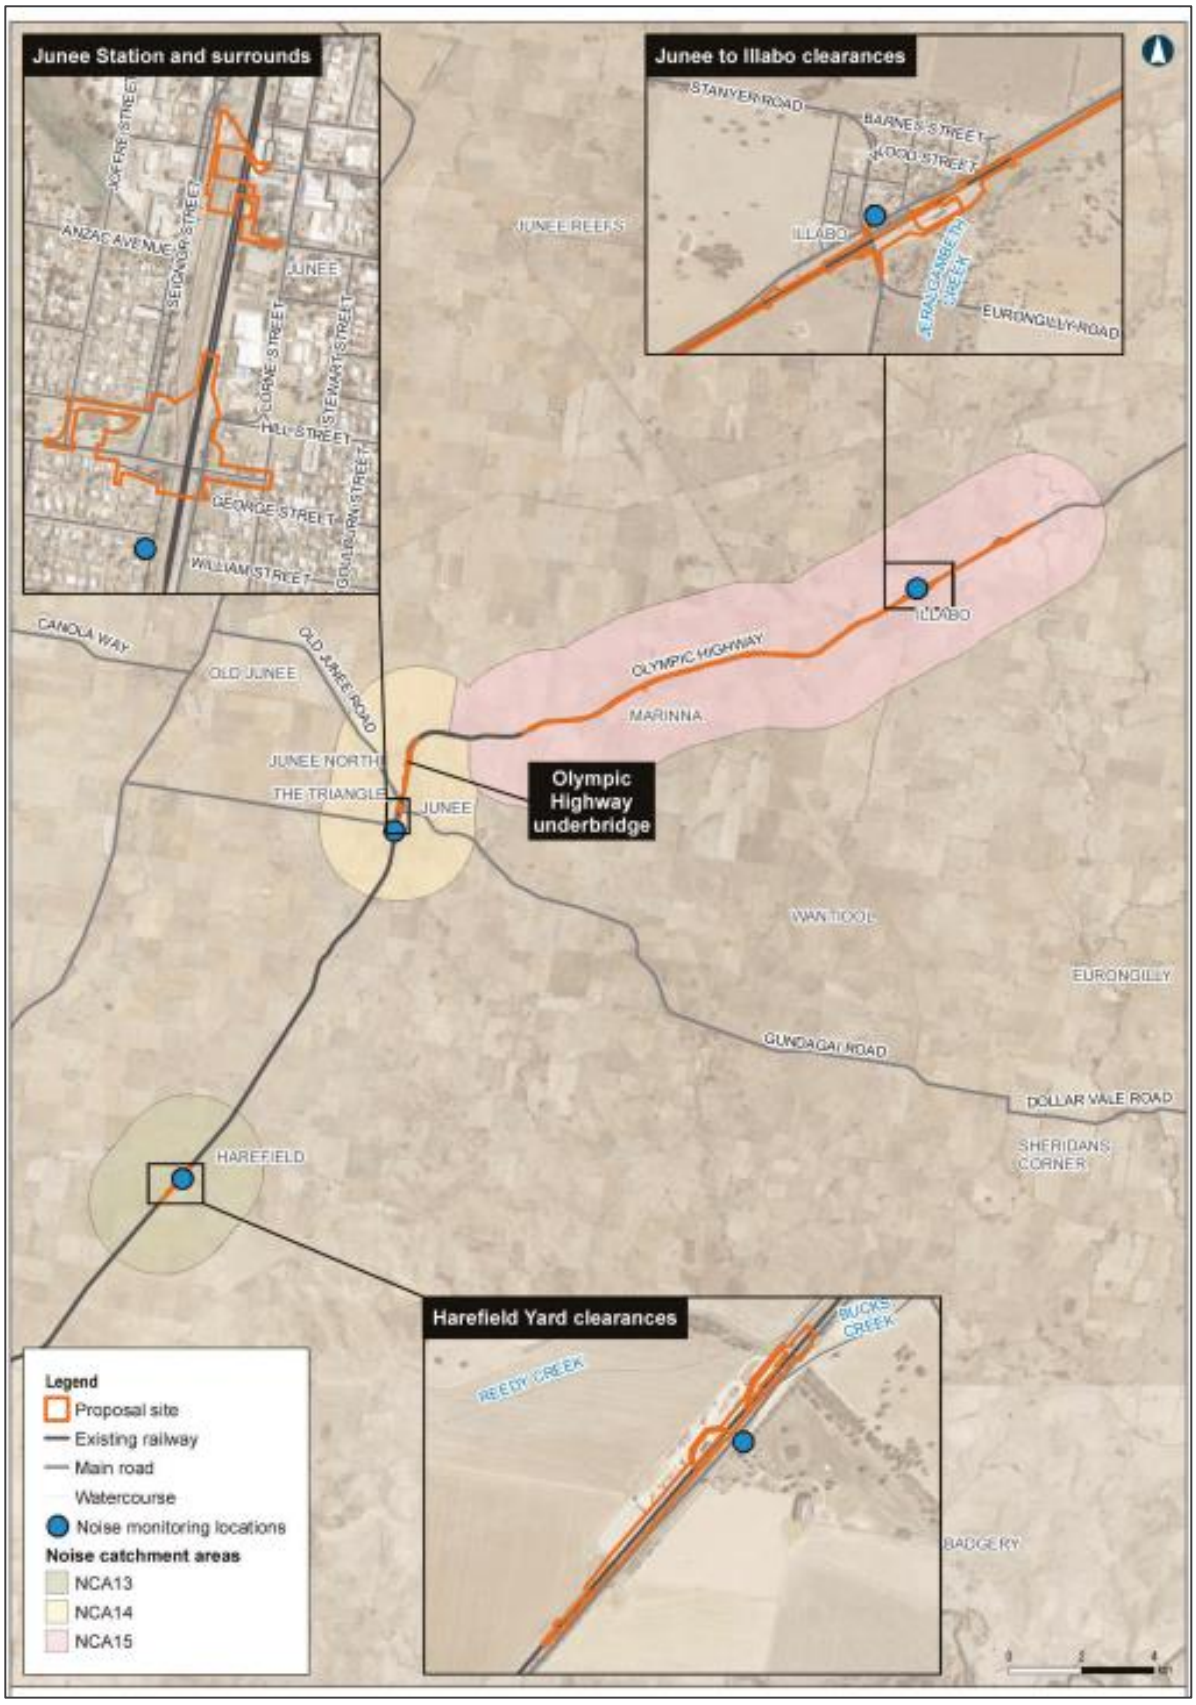

Figure 4-1: EAD mapped location of NCA 14 in relation to Junee Precinct

4.3.2 Construction hours

Construction hours for Junee Yard are as discussed in Section 2.4, with the following also noted:

Highly noise intensive works

'Highly noise intensive works' as per the Project Approval are defined as:

- use of power saws, such as used for cutting timber, rail lines, masonry, road pavement or steel work
- grinding metal, concrete or masonry
- rock drilling
- line drilling
- vibratory rolling
- bitumen milling or profiling
- jackhammering, rock hammering or rock breaking
- impact piling; and
- tamping (for rail Projects).

As outlined in Condition of Approval (CoA) E70, any highly noise intensive works that result in an exceedance of the applicable NML at the same receiver must only be undertaken between:

- 8:00am to 6:00pm Monday to Friday
- 8:00am to 1:00pm Saturday
- If continuously, then not exceeding (3) hours, with a maximum cessation of work of not less than an hour.

Out-of-hours work

In accordance with CoA E73, where out-of-hours work (OOHW) is required for:

- For carrying out work that if carried out during standard hours would result in a high risk to construction personnel or public safety based on a risk assessment carried out in accordance with AS/NZS ISO 31000:20018: "Risk management - Guidelines; or
- Where the relevant roads authority has advised the Proponent in writing that carrying out the work during standard hours would result in a high risk to road network performance and a road occupancy licence will not be issued; or
- Where the relevant utility service operator has advised the Proponent in writing that carrying out the work during standard hours would result in a high risk to the operation and integrity of the utility network; or
- Work undertaken in a rail possession for operational or safety reasons.

This will be regulated through the OOHW Protocol except as permitted by an EPL.

4.3.3 Impact assessment

Predicted noise levels

A summary of the predicted worst-case noise levels for each activity of the Proposed Change has been provided by the endorsed CNVIS (Appendix A) and CNVIS ADD1 (Appendix B). The activities associated with the Proposed Change have been noted as per below:

Junee Yard 110 Crossover

- W.008 as track tamping

Residential receivers (CNVIS ADD1)

All work scenarios will result in 'noticeable' to 'highly intrusive' noise impacts for all periods (Appendix B). The Junee Yard 110 Crossover CNVIS ADD1 impacts on residential receivers are summarised as follows:

- Highly Intrusive' noise impacts are predicted at the closest residential receivers for the tamping work scenario across all approved and OOHW periods.
- A single receiver is predicted to be 'highly noise affected' during approved work hours for tamping.
- Noise levels are predicted to exceed the sleep disturbance screening level and sleep awakening criteria for the assessed work scenario occurring during the night-time period. Sleep disturbance impacts would generally be caused by the more noise intensive equipment. Where reasonable and feasible, these activities should be limited to the less sensitive periods to avoid noise impacts during more sensitive out-of-hours periods. The number of awakening events would depend on several factors, including the equipment being used, the duration of noisy work and the distance of the work to each residential receiver. Further detail around the specific OOHW, (e.g. duration and justification) will be identified in the OOHW permit.

Junee Yard 110 Crossover– other sensitive receivers (CNVIS ADD1)

The Junee Yard 110 Crossover CNVIS ADD1 impacts for other sensitive receivers are summarised as follows:

- 'Highly Intrusive' noise impacts are predicted at the closest 'other' sensitive receivers for the tamping work scenario during the approved day and OOHW day periods.

Ground-borne noise

Ground-borne construction noise impacts from the Proposed Change are not anticipated as vibration intensive work with the potential to generate perceptible ground-borne noise, is not included in the scope of work. Vibration intensive work for the Project will be completed outdoors meaning airborne noise levels at the nearest receivers are expected to be higher than the corresponding internal ground-borne noise levels.

Where airborne noise levels are higher than ground-borne noise levels it is not necessary to evaluate potential ground-borne noise impacts and as such, they have not been considered further for this assessment.

Vibration impacts

For Junee Yard 110 Crossover it has been assessed that vibration intensive items of equipment that would be required during work assessed in this CNVIS ADD1 include ballast tamper, ballast regulator, rail saw and grinder. The plant items required and the potential impacts during vibration intensive work have been assessed using the Transport CNVG-PTI minimum working distances for cosmetic damage and human response shown in Table 4-5.

Table 4-5: Vibration intensive equipment

PLANT ITEM/RATING/ DESCRIPTION	MINIMUM DISTANCE				
	COSMETIC DAMAGE				HUMAN RESPONSE (NSW EPA GUIDELINE)
	RESIDENTIAL AND LIGHT COMMERCIAL (BS 7385)	HERITAGE ITEMS (DIN 4150, GROUP 3)	INDUSTRIAL AND HEAVY COMMERCIAL (BS 7385)	CANAL (BS 5228)[1]	
Ballast tamping	5m	10m	3m	3m	30m

Cosmetic damage assessment

The CNVIS ADD1 determines that commercial buildings within the railway corridor have the potential to fall within the cosmetic damage minimum working distance.

Offset distances from specific vibration intensive plant to the nearest receivers and building construction should be confirmed before commencing vibration intensive work during construction.

Before commencement of any work, a structural engineer must undertake condition surveys of all building, structures, utilities and the like identified in the documents CoA A1 as being at risk of damage. As per the CNVIS ADD1, condition surveys (based on the Ballast Tamper, Ballast Regulator, Rail Saw and Grinder) are required for:

- Four non-residential structures within the rail corridor at Junee Yard – 110 Crossover.

Human Comfort Assessment

Receivers within close proximity to the Proposed Change have the potential to fall within the human comfort minimum working distances, and occupants of these buildings may be able to perceive vibration impacts at times when ballast tamper, ballast regulator, rail saw and / or grinders are in use nearby. Where impacts are perceptible, they would likely only be apparent for relatively short durations when vibration intensive equipment is in use nearby.

One residential and nine non-residential properties fall within the minimum working distance for human comfort.

Heritage structures

All heritage structures identified are located outside the minimum working distances for cosmetic damage for unsound heritage. Therefore, vibration impacts to heritage structures are not expected.

A heritage assessment memo prepared by OzArk (Aug 2026) (Appendix C) concluded ‘The Junee North Box, while relevant to the evolving railway history of Junee, is not of unique or rare construction with other examples present with the Southern Junee Box present further south retained within the Junee Railway Station SHR curtilage and at other railway station groups in NSW. Further, the structure is not aesthetic or associated with a historic event or individual. The Junee North Box has no local, state or Commonwealth heritage significance’. A condition report has been undertaken on this building.

4.3.4 Conclusion

Feasible and reasonable management and mitigation measures will be implemented as required to minimise noise, vibration and cumulative impacts for the scope of works as per the Proposed Change.

All applicable mitigation measures in the CoAs and UMMs will be implemented, with any identified additional mitigation measures outlined in Table 4-9.

4.4 Aboriginal Heritage

4.4.1 Existing environment

The CIZ extension is located within the developed centre of Junee, which is largely situated within an undulating plain landform. The study area is relatively flat at an elevation of 300m above sea level Australian Height Datum.

Rock Creek, a minor second order watercourse, is mapped 25 m north of the CIZ extension. Due to the significant historic land modification in the area, the creek has been diverted through a culvert located within the CIZ extension. This watercourse is not considered to have been a reliable water source to have supported Aboriginal occupation and has been heavily modified through urban development. More reliable

waters are located outside of the CIZ extension including Butlers Gully 390 m southwest and Houlaghans Creek approximately 5.7 kilometres west.

4.4.2 Impact assessment

AHIMS search

On 28 July 2026, a basic search of the Aboriginal Heritage Information Management System (AHIMS) was undertaken over the CIZ extension (GDA, Zone: 55, Eastings: 552753 – 554019, Northings: 6140019-6143153) (Appendix C). One isolated find site (A2I-2 Junee IF [50-5-0292]) was located within the search area, approximately 695 m north of the northern limit of the proposed CIZ extension proposed for Junee (OzArk, 2026).

4.4.3 Conclusion

The assessment for Aboriginal heritage using the Due Diligence Code has determined that the proposed CIZ extension has a low likelihood of harming Aboriginal objects or landscape features with archaeological sensitivity.

No previously recorded Aboriginal sites are within, or near to, the CIZ extension, and it was determined that due to land use disturbance, there is very low likelihood of intact, subsurface archaeological deposits.

No further archaeological investigation is required.

The works may proceed with caution and in the unlikely event that Aboriginal objects are encountered, refer to the Cultural Heritage Unexpected Find Procedure (Appendix E).

4.5 Non-Aboriginal Heritage

4.5.1 Existing environment

The proposed CIZ extension is confined to the existing railway corridor. Desktop assessment indicates that this area has been subject to repeated disturbance associated with the construction and maintenance of rail and signalling infrastructure. Further, OzArk (2026) identified archaeological deposits further north which does not extend into the proposed CIZ extension. As such, they have a low likelihood of containing unrecorded, significant, historic archaeological deposits.

4.5.2 Impact assessment

A search of the Heritage Council of NSW administered heritage databases and the Junee LEP returned no records for historical heritage sites within the designated search areas. However, the proposed CIZ extension abuts the northernmost boundary of the “Junee Station, Yard, and Locomotive Depot” SHR curtilage.

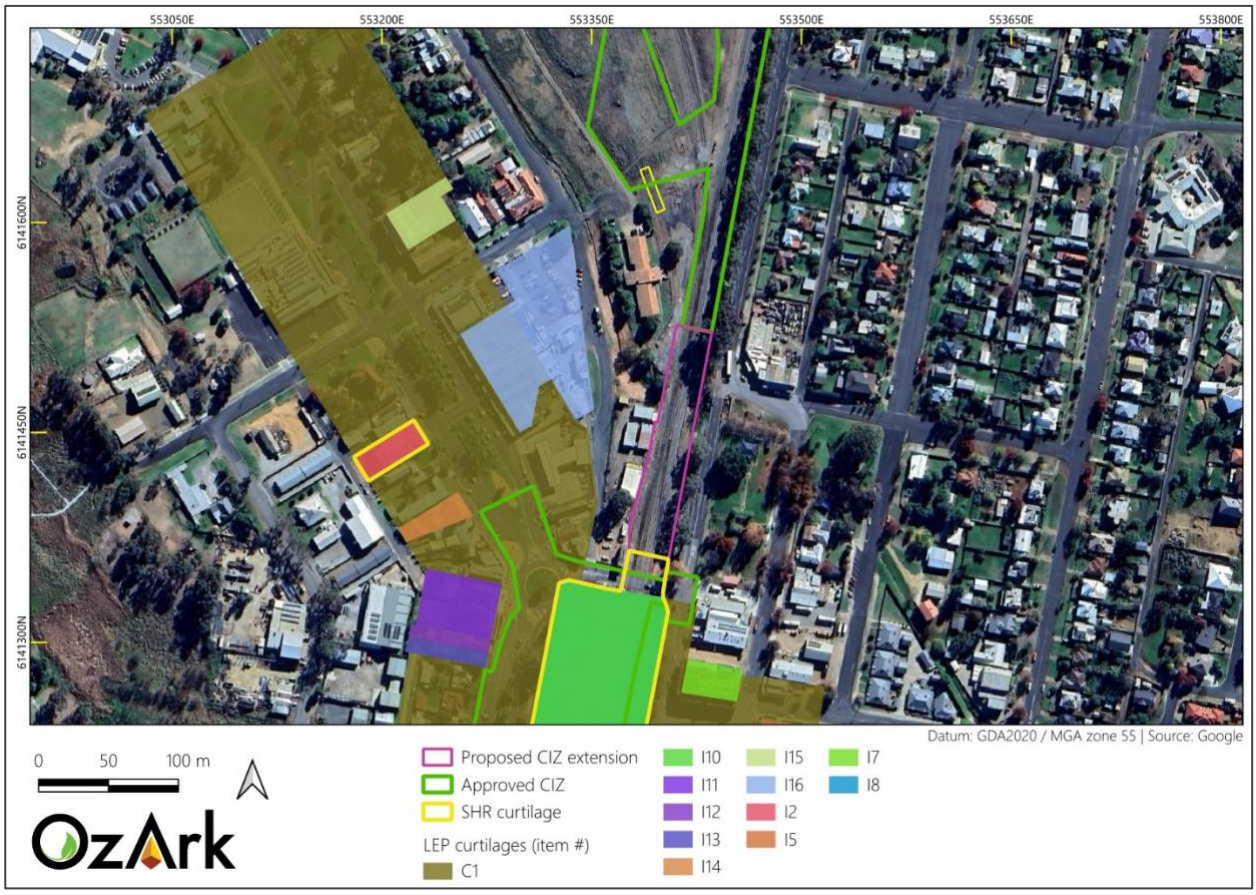

Figure 4-2: Heritage curtilages in relation to the proposed CIZ extension.

The Junee Railway Station is an item of State heritage significance, listed as the "Junee Station, Yard, and Locomotive Depot" (SHR 01173). The station itself is listed on the Junee LEP (I8) as an item of local significance. It is also listed as an item of state heritage significance on the ARTC's s170 Heritage and Conservation Register (4280760).

Desktop inspection of the proposed CIZ extension identified a signal/shunting box (Junee North Box) situated immediately adjacent to the CIZ extension west boundary.

The Junee North Box, while relevant to the evolving railway history of Junee, is not of unique or rare construction with other examples present with the Southern Junee Box present further south retained within the Junee Railway Station SHR curtilage and at other railway station groups in NSW. Further, the structure is not aesthetic or associated with a historic event or individual. The Junee North Box has no local, state or Commonwealth heritage significance.

All listed heritage fabric relevant to the Junee Railway Station is situated further south within the SHR curtilage and will be separated from the CIZ extension by the existing level crossing. As such, the proposed works will avoid all state significant heritage fabric of the "Junee Station, Yard, and Locomotive Depot". As such, it is considered that the impact on the heritage values of the Junee Railway Station will be negligible.

4.5.3 Archaeological potential

The proposed CIZ extension is confined to the existing railway corridor. Desktop assessment indicates that this area has been subject to repeated disturbance associated with the construction and maintenance of rail and signalling infrastructure. Further, OzArk (2026)(Appendix C) identified archaeological deposits further north which does not extend into the proposed CIZ extension. As such, they have a low likelihood of containing unrecorded, significant, historic archaeological deposits.

4.5.4 Conclusion

This assessment concludes that the proposed CIZ extension would result in negligible impacts to the SHR curtilage of the "Junee Station, Yard, and Locomotive Depot" and the Junee North Box.

It can be concluded that the proposed CIZ extension will have "no impacts on heritage items (including areas of archaeological potential) beyond the impacts approved under the terms of this approval", as long as the measures outlined in Section 6 of the CCHMP (Stage B) and those listed in Appendix C Heritage Assessment are implemented. This will ensure that proposed works will not directly or indirectly impact any identified or potential heritage items.

4.6 Biodiversity

4.6.1 Existing environment

The Proposed Change is located in the NSW South-western Slopes bioregion, within the Inland slopes subregion. The Proposed Change is located within or adjacent to the existing rail corridor in areas that have been predominantly cleared. The landscape in the area surrounding the proposal has been heavily fragmented by development, with existing habitat connectivity limited to creek lines and road reserves.

The Subject Land is located in the Town of Junee in the Junee Local Government Area (LGA), covering an area of approximately 0.46ha.

4.6.2 Impact Assessment

One mapped watercourse intersects the Subject Land in the central extent. The Subject Land is therefore associated with a riparian buffer zone. The proposed activity does not require works within mapped KFH, nor did threatened aquatic species or marine vegetation protected under the FM Act occur within the Subject Land.

Negligible terrestrial habitat connectivity exists between the Subject Land and the broader landscape due to historical clearing and existing infrastructure (e.g. roads, railway and built areas).

The Subject Land may provide mobile species with minor refuge while moving throughout the landscape, however due to the degraded condition of the vegetation, it is not considered likely that threatened species would be reliant on this area as a part of their life cycle.

No Areas of Outstanding Biodiversity Value occur on the Subject Land or the surrounding area.

The NSW State Vegetation Type Map (NSW DCCEEW, 2024b) indicated the absence of PCTs within or adjoining, the Subject Land. The Subject Land has been mapped as 'Not classified'.

4.6.3 Conclusion

The proposed activity will require impacts to the following:

- 0.27ha of Miscellaneous Ecosystems - Highly Disturbed areas with no or limited Native Vegetation.

No impacts to threatened species, populations or ecological communities are expected as a result of the proposed activity.

Although outside the assessed construction boundary for the Project, the biodiversity impacts are considered consistent with the initial assessment (WSP, 2024), and no further offsets (ecosystem or species) would be required.

4.7 Flooding risk

4.7.1 Existing environment

The Proposed Change is located within the Murrumbidgee catchment of the Murray-Darling Basin. The Murrumbidgee catchment extends from the Kosciuszko National Park in eastern NSW to Balranald in western NSW, with inflows primarily sourced from the Great Dividing Range (EIS, Chapter 18).

The frequency of flood events is generally referred to in terms of their annual exceedance probability (AEP). For example, for a 5% AEP flood, there is a five per cent probability (or a one in 20 chance) that there would be floods of a greater magnitude in any given year. For a 1% AEP flood, there is a one per cent probability (or a one in 100 chance) that there would be floods of greater magnitude each year. The probable maximum flood (PMF) is the largest flood that could be expected to occur at a particular location, usually estimated from probable maximum precipitation.

4.7.2 Impact Assessment

The Proposed Change areas are not located within flood prone land, and therefore not affected by events up to the 1% AEP.

4.7.3 Conclusion

Construction activities at the Proposed Change areas would be minor and short term and undertaken on land that is not considered flood prone. Therefore, no significant impacts to flood behaviour are anticipated as a result of the Proposed Change which is consistent with the flood risk/behaviour of the approved works.

All applicable mitigation measures in the CoAs and UMMs will be implemented, with any identified additional mitigation measures outlined in Table 4-9.

4.8 Soils and contamination

4.8.1 Existing environment

The EAD identified the presence of dispersive soils or soils prone to high erosion hazard at several sites including within the Junee precinct. The presence of dispersive soils creates an increased potential for erosion impacts which would be minimised by implementing standard best-practise soil erosion control measures during construction.

Saline soils

The Proposed Change is located on land mapped as having ‘moderate’ land salinity hazard though is not expected to be impacted due to the nature of the change.

Acid sulfate soils

The Proposed Change area is located within areas described as low probability of acid sulfate soils (ASS).

Naturally acidic soil

The Proposed Change area is located on land that could be impacted by naturally acidic soils.

Contamination

The Proposed Change is located within an existing rail corridor, which is considered to contain a general level of risk associated with contamination from historical development and activities associated with its operation. A range of sites adjacent to the rail corridor that would be considered to have associated

contaminated risk were identified, including agricultural land. The sources for these general contamination risks include (EIS, Chapter 20):

- fill used in construction of the existing rail line, which may be contaminated EIS weed-suppression activities
- buildings potentially containing hazardous materials
- rail line ballast potentially containing heavy metals and other contaminants
- contamination from maintenance activities undertaken at sidings and near silos or other areas
- use of chemicals on agricultural land
- machinery storage and maintenance, refuelling and spray rig filling, agricultural sheds and silos

The Proposed Change area is located in proximity to an Area of Environmental Concern (AEC) noted as AEC 45 which is situated greater than 200m from the Proposed Change CIZ boundary. Description of the AEC and potential contaminants of concern are shown in Table 4-6.

Table 4-6: Description of AEC and potential contaminants of concern

ENHANCEMENT SITE	AEC	DESCRIPTION OF AEC	POTENTIAL CONTAMINANTS OF CONCERN
Junee Yard	AEC 45	Mobil service station	TRH, BTEX, PAHs and/or lead

4.8.2 Impact Assessment

- As no clearing of ground cover or excavation is required as part of the Proposed Change no impact to soils or contamination is anticipated.

4.8.3 Conclusion

Construction activities at the Proposed Change area are not expected to impact soils and contamination.

All applicable mitigation measures in the CoAs and UMMs will be implemented, with any identified additional mitigation measures outlined in Table 4-9.

4.9 Air quality

4.9.1 Existing environment

Regional air quality is mainly influenced by rural activities, industrial activities, vehicle emissions, railway operations, power generation, waste management and extraction activities. Dust from paved and unpaved roads, and domestic solid and liquid fuel burning in the region, also contribute to the local air shed.

As noted in the EIS (Chapter 22), air quality data has been sourced from a monitoring station at Junee, with the results summarised in Table 4-7 below, alongside the air quality impact assessment criterion for each pollutant specified in the *Approved Methods for the Modelling and Assessment of Air Pollutants in New South Wales* (NSW EPA, 2016).

Table 4-7: Background air quality

MONITORING STATION	POLLUTANT	AVERAGING PERIOD	AIR QUALITY IMPACT	YEAR[2]				
				2016	2017	2018	2019	2020

			ASSESSMENT CRITERIA					
Junee[1]	Total suspended particles (g/m^3)	Annual	90	**292**	**358**	**1,331**	**3,523**	**9,018**

1. The Junee air quality monitoring station only measures TSP (DustTrak). It is not a National Environment Protection Measure (NEPM) performance monitoring station and does not conform to Australian Standards. Levels should be viewed as indicative only.2. Exceedances of the air quality assessment criteria are shown in bold.

4.9.2 Impact Assessment

Dust emissions

As no clearing of ground cover or excavation is required and access to the Proposed Change area will be via hi-rail or workers on foot no impact to air quality is anticipated.

4.9.3 Conclusion

Following the implementation of appropriate mitigation measures, the residual air quality impacts would be reduced to negligible to low risk and short-term.

All applicable mitigation measures in the CoAs and UMMs will be implemented, and any additional mitigation measures are outlined in Table 4-9.

4.10 Landscape and visual

4.10.1 Existing environment

The Proposed Change area is located at the boundary of the upper slopes of the Southwestern Bioregion, characterised by steep, hilly and undulating ranges and granite basins, with open forests and woodlands.

A common feature of the landscape and visual catchment across the Proposed Change area is the operational rail corridor of the Main South Line. This corridor has been largely cleared of native vegetation and generally consists of ornamental vegetation and a few scattered trees.

Landscape character

The Junee Station and town centre is focused on the state heritage listed railway station, which ‘is a key element in the streetscape of this part of Junee’ (Heritage NSW, 2021) and forms the central part of Junee Heritage Conservation Area (Junee LEP). This area is a main arrival point for Junee and would be experienced by local residents and visitors to Junee. The station is a local landmark and is among a concentration of heritage character buildings and landscape features. This landscape is of local landscape sensitivity.

4.10.2 Impact Assessment

As the works are limited to 170m of rail line with access to the Proposed Change via hi-rail and workers on-foot impacts to the landscape and visual amenity is anticipated to be short-term and minor.

4.10.3 Conclusion

The Proposed Change would involve the same construction activities as assessed for the Junee Precinct enhancement sited as noted in the EAD.

Potential impacts to landscape character (excluding non-Aboriginal heritage) and viewpoints are considered to be short-term and minor in nature with the implementation of appropriate mitigation measures as outlined in the CoA and UMMs.

All applicable mitigation measures in the CoAs and UMMs will be implemented, with any identified additional mitigation measures outlined in Table 4-9.

4.11 Matters of national environmental significance

As discussed in Section 1.1 the A2I Project was referred to the Australian Government Minister for the Environment under the EPBC Act due to potential for impacts on protected matters on 2 June 2020 (EPBC Referral No 202/8670). On 29 June 2020, DAWE notified that the proposal is not a controlled action, and hence approval under the EPBC Act is not required.

The Proposed Change is considered against matters of national environmental significance and impacts on Commonwealth land in accordance with the EPBC Act in Table 4-8, which determined that there would be no impacts on matters of national environmental significance, and no referral is required.

Table 4-8: Matters of environmental significance

FACTOR	IMPACT (YES/NO)	IMPACT DESCRIPTION
Any impact on a World Heritage property?	No	The Proposed Change would not have a direct or indirect impact on any World Heritage property.
Any impact on a National Heritage place?	No	The Proposed Change would not have a direct or indirect impact on any National Heritage place.
Any impact on a wetland of international importance?	No	The Proposed Change would not have a direct or indirect impact on any wetlands of international importance (also referred to a Ramsar wetlands).
Any impact on a listed threatened species or communities?	No	No, there are no impacts to threatened species, populations or ecological communities are expected as a result of the proposed activity.
Any impacts on listed migratory species?	No	No, there are no impacts to threatened species, populations or ecological communities are expected as a result of the proposed activity.
Any impact on a Commonwealth marine area?	No	The Proposed Change would not have a direct or indirect impact on any Commonwealth marine area.
Does the proposal involve a nuclear action (including uranium mining)?	No	The Proposed Change does not relate to a nuclear action.
Additionally, any impact (direct or indirect) on Commonwealth land?	No	The Proposed Change is not located in proximity to and would not have any direct or indirect impact on, any Commonwealth land, as per a review of the publicly available 'Commonwealth Owned Land' dataset for non-Corporate Commonwealth entities provided by the Commonwealth Department of Finance (dated 30 June 2024).

4.12 Environmental management measures

Table 4-9 outlines any changes to relevant CoAs and UMMs, called EMMs in this document, that will be implemented as additional management measures for the Proposed Change.

Table 4-9: Additional mitigation measures

ASPECT	NATURE AND EXTENT OF IMPACTS (NEGATIVE AND POSITIVE) DURING CONSTRUCTION (IF CONTROL MEASURES IMPLEMENTED) OF THE PROPOSED CHANGE, RELATIVE TO THE APPROVED PROJECT	PROPOSED CONTROL MEASURES IN ADDITION TO PROJECT COA AND UMM	MINIMAL IMPACT YES/NO	ENDORSED	
				Yes/No	Comments
Traffic and transport	The Proposed Change's scope of works would not result in an increase in the level of impact assessed as part of the A2I EAD and would not impact on the Project's ability to comply with relevant CoAs and UMMs.	No additional measures required.	Yes		
Noise and vibration	The Proposed Change's scope of works would not result in an increase in the level of impact assessed as part of the A2I EAD and would not impact on the Project's ability to comply with relevant CoAs and UMMs.	No additional measures required.	Yes		
Aboriginal heritage	A Heritage Assessment (Appendix C) has been prepared for the Proposed Change and has concluded the works may proceed with caution and potential impacts on Aboriginal Heritage can be appropriately managed in accordance with the CoAs and UMMs.	No additional measures required.	Yes		
Non-Aboriginal heritage	A Heritage Assessment (Appendix C) has been prepared and concluded that the proposed CIZ extension will have "no impacts on heritage items (including areas of archaeological potential) beyond the impacts approved under the terms of this approval", as long as the measures outlined in Section 6 of the CCHMP (Stage B) and those listed in Appendix C Heritage Assessment are implemented	▸ No additional measures required.	Yes		
Biodiversity	There would be no impacts to threatened species, populations or ecological communities are expected as a result of the Proposed	No additional measures required.	Yes		

	Change. Although outside the assessed construction boundary for the Project, the biodiversity impacts are considered consistent with the initial assessment (WSP, 2023), and no further offsets (ecosystem or species) would be required subject to the implementation of all applicable mitigation measures in the CoAs and UMMs.				
Flood risk	No significant impacts to flood behaviour are anticipated for events up to and including the 1% AEP.	No additional measures required.	Yes		
Soils and contamination	Construction activities at the Proposed Change area would be short term and would be prepared with consideration of the existing soils and contamination characteristics of the area.	No additional measures required.	Yes		
Air quality	Air quality impacts are expected to be short-term and minor in nature.	No additional measures required.	Yes		
Landscape and visual	Impacts to landscape sensitivity, viewpoints and night-time visual are expected to be short-term and minor in nature.	No additional measures required.	Yes		

5 Consistency Assessment

The factors in Table 5-1 are considered against the Proposed Change as described in this document to determine whether the proposed change can be considered consistent with the Minister's approval.

Table 5-1 Consistency questions

CONSISTENCY QUESTION	DISCUSSION	CONSISTENT
Q1) Are the proposed works being carried out as part of an approved project? E.g. Are works "generally in accordance with" project documents and plans, where relevant?	As considered throughout this document, the Proposed Change is being carried out in accordance with the EAD.	Yes
Q2) Is the modification such a radical transformation of the Project as a whole, as to be, in reality, an entirely new Project? Note: If answered Yes, a new project application may be required.	The Proposed Change does not constitute a modification, is not a radical transformation of the Project as a whole and is not an entirely new Project.	Yes
Q3) Are the proposed works a modification that is considered "consistent with" the project as approved? This will require the work in question to have environmental impacts contemplated by the approval (such as EA / EIS, CEMP, spoil management plan, heritage management plan or the like), including documents forming part of the approval, or as a minimum, very few additional impacts.	The Proposed Change, as considered in Chapter 2 is considered "consistent with" the Infrastructure Approval. The Proposed Change is considered to be consistent with the impacts contemplated by the EAD outlined in CoA 1 of the Infrastructure Approval.	Yes
Q4) When considering all previous consistency assessments and the potential cumulative impacts, are the proposed works still considered 'consistent with' the project as approved?	The Proposed Change is considered "consistent with" the Project, including any potential cumulative impacts. Any subsequent consistency assessments would be subject separate consideration for potential cumulative impacts.	Yes

6 Monitoring and Reporting

There are no further monitoring or reporting required as a result of the Proposed Change.

7 Conclusion

Based on the consistency assessment in this report, the Proposed Change is considered:

☒ Consistent with the Ministers Conditions of Approval, and the Statement of Commitments / Mitigation Measures.

~~☐Not consistent with the Ministers Conditions of Approval, and the Statement of Commitments / Mitigation Measures. A modification to the project approval must be prepared and submitted to the Department of Planning Infrastructure and Environment for approval.~~

Compliance Table

CoA	Requirement	Reference
A1	The Proponent must carry out the CSSI in accordance with the terms of this approval and generally in accordance with the: a) Inland Rail – Albury to Illabo Environmental Impact Statement (ARTC, August 2022) b) Albury to Illabo Response to Submissions (ARTC, November 2023) c) Albury to Illabo Preferred Infrastructure Report (ARTC, November 2023) d) Albury to Illabo Preferred Infrastructure Report Response to Submissions (ARTC, February 2024) e) Inland Rail – Albury to Illabo (SSI-10055) Response to request for additional information – Air Quality Assessment (letter dated 1 May 2024) f) Part 1 - Revised Technical Paper 8: Biodiversity Development Assessment Report (WSP, February 2024) g) Part 2 - Revised Technical Paper 8: Biodiversity Development Assessment Report (WSP, February 2024)	**The CNVMP**
A2	The CSSI must only be carried out in accordance with all procedures, commitments, preventative actions, performance criteria and mitigation measures set out in the documents listed in Condition A1 unless otherwise specified in, or required under, this approval.	**The CNVMP**
C9	The Construction Noise and Vibration Sub-plan must include, but not limited to: a) measures to reduce construction to standard ICNG hours where sensitive land uses are likely to be noise affected for more than 3 months; b) an approach to assess and manage construction fatigue from noise impacts on sensitive receivers on an ongoing basis; c) noise sensitive periods identified by the community, religious, educational institutions, noise and vibration-sensitive businesses and critical working areas and measures to ensure noise levels above the NMLs do not occur during sensitive periods in accordance with Condition E76; d) mitigation for construction traffic noise impacts from additional construction traffic and road diversions; e) the location of all heritage items, non-heritage structures and infrastructure likely to be impacted by vibration and measures to manage vibration impacts at those items and structures; and f) vibration levels at a range of distances from vibration intensive equipment such as excavators and vibratory rollers before undertaking works with the specific type and size of equipment.	**The CNVMP**
E68	A detailed land use survey must be undertaken to confirm sensitive land use(s) (including critical working areas such as operating theatres and precision laboratories) potentially exposed to construction noise and vibration, construction ground-borne noise and operational noise. The survey may be undertaken on a progressive basis but must be undertaken in any one area before the commencement of work which generates construction or operational noise, vibration or ground-borne noise in that area. The results of the survey must be included in the Noise and Vibration CEMP sub-plan required by Condition C8.	**The CNVMP, Section 3.0, Figure 1**
E69	Work must be undertaken during the following hours: a) 7:00am to 6:00pm Mondays to Fridays, inclusive; b) 7:00am to 6:00pm Saturdays; and c) at no time on Sundays or public holidays.	**Section 2.2**

Docusign Envelope ID: 48BDB7AD-A0C7-8AA6-807F-DA2CDEDCBD18

CoA	Requirement	Reference
E70	Except as permitted by an EPL, highly noise intensive works that result in an exceedance of the applicable NML at the same receiver must only be undertaken: a) between the hours of 8:00 am to 6:00 pm Monday to Friday; b) between the hours of 8:00 am to 1:00 pm Saturday; and c) if continuously, then not exceeding three (3) hours, with a minimum cessation of work of not less than one hour. For the purposes of this condition, 'continuously' includes any period during which there is less than one hour between ceasing and recommencing any of the work.	**Section 2.2.1**, **Section 8.2**
E71	Notwithstanding Conditions E69 and E70, work may be undertaken outside the hours specified in the following circumstances (a, b, or c): a) Safety and Emergencies, including: i. for the delivery of materials required by the NSW Police Force or other authority for safety reasons; or ii. where it is required in an emergency to avoid injury or the loss of life, to avoid damage or loss of property or to prevent environmental harm. On becoming aware of the need for emergency work in accordance with Condition E71(a), the AA, the ER, the Planning Secretary and the EPA must be notified of the reasons for such work. Best endeavours must be used to notify all noise and/or vibration affected residents and owners/occupiers of properties identified sensitive land use(s) of the likely impact and duration of those work. b) Work, that meets the following criteria: i. construction that causes $L_{Aeq(15\ minute)}$ noise levels: • no more than 5 dB(A) above the rating background level at any residence in accordance with the ICNG, and • no more than the 'Noise affected' NMLs specified in Table 3 of the ICNG at other sensitive land use(s); and ii. construction that causes L_{AFmax} noise levels no more than 15 dB above the rating background level at any residence during the night period as defined in the ICNG. and iii. construction that causes: • continuous or impulsive vibration values, measured at the most affected residence no more than the preferred values for human exposure to vibration, specified in Table 2.2 of *Assessing Vibration: a technical guideline* (DEC, 2006), or • intermittent vibration values measured at the most affected residence no more than the preferred values for human exposure to vibration, specified in Table 2.4 *of Assessing Vibration: a technical guideline* (DEC, 2006). c) By Approval, including: i. where different construction hours, such as those for a rail possession, are permitted under an EPL in force in respect of the CSSI; or ii. works which are not subject to an EPL that are approved under an Out-of-Hours Work Protocol as required by Condition E72; or iii. negotiated agreements with directly affected residents and sensitive land use(s).	**Section 2.3**
E72	An Out-of-Hours Work Protocol must be prepared to identify a process for the consideration, management and approval of work which is outside the hours defined in Conditions E69, and that are not subject to an EPL. The Protocol must be approved by the Planning Secretary before commencement of the Out-of-Hours Work. The Protocol must be prepared in consultation with the ER, AA and EPA.	**The CNVMP, Section 2.4**

Docusign Envelope ID: 48BDB7AD-A0C7-8AA6-807F-DA2CDEDCBD18

CoA	Requirement	Reference
	The Protocol must include: a) identification of low and high-risk activities and an approval process that considers the risk of activities, proposed mitigation, management, and coordination, including where: i. the ER and AA review all proposed out-of-hours activities and confirm their risk levels, ii. low risk activities can be approved by the ER in consultation with the AA, and iii. high risk activities that are approved by the Planning Secretary; b) a process for the consideration of out-of-hours work against the relevant NML and vibration criteria; c) a process for selecting and implementing mitigation measures for residual impacts in consultation with the community at each affected location, including respite periods. The measures must take into account the predicted noise levels and the likely frequency and duration of the out-of-hours works that sensitive land use(s) would be exposed to, including the number of noise awakening events; d) procedures to facilitate the coordination of out-of-hours work including those approved by an EPL or undertaken by a third party, to ensure appropriate respite is provided; and e) notification arrangements for affected receivers for approved out-of-hours work and notification to the Planning Secretary of approved low risk out-of-hours works. This condition does not apply if the requirements of Condition E71 are met.	
E73	Except as permitted by an EPL, out-of-hours work that may be regulated through the Out-of-Hours Work Protocol as per Condition E72, but is not limited to: a) Carrying out work that if carried out during standard hours would result in a high risk to construction personnel or public safety based on a risk assessment carried out in accordance with AS/NZS ISO 31000:2009: "Risk management; or b) where the relevant roads authority has advised the Proponent in writing that carrying out the work during standard hours would result in a high risk to road network performance and a road occupancy licence will not be issued; or c) where the relevant utility service operator has advised the Proponent in writing that carrying out the work during standard hours would result in a high risk to the operation and integrity of the utility network; or d) work undertaken in a rail possession for operational or safety reasons. *Note: Other out-of-hours works can be undertaken with the approval of an EPL, or through the project's Out-of-Hours Work Protocol for works not subject to an EPL.*	**Section 2.3**
E74	Mitigation measures must be implemented with the aim of achieving the following construction noise management levels and vibration objectives: a) construction 'Noise affected' NMLs established using the Interim Construction Noise Guideline (DECC, 2009); b) vibration criteria established using *the Assessing vibration: a technical guideline* (DEC, 2006) (for human exposure); c) Australian Standard AS 2187.2 - 2006 "*Explosives - Storage and Use - Use of Explosives*"; d) BS 7385 Part 2-1993 "*Evaluation and measurement for vibration in buildings Part 2*" as they are "applicable to Australian conditions"; and e) the vibration limits set out in the *German Standard DIN 4150-3: Structural Vibration- effects of vibration on structures* (for structural damage).	**The CNVMP, Section 4.0, Section 8.0**

Docusign Envelope ID: 48BDB7AD-A0C7-8AA6-807F-DA2CDEDCBD18

CoA	Requirement	Reference
	Work that exceeds the noise management levels and/or vibration criteria must be managed in accordance with the Noise and Vibration CEMP sub-plan. *Note: The ICNG identifies 'particularly annoying' activities that require the addition of 5 dB(A) to the predicted level before comparing to the construction NML.*	
E75	Mitigation measures must be applied when the following residential ground-borne noise levels are exceeded: a) evening (6:00 pm to 10:00 pm) — internal $L_{Aeq(15\ minute)}$: 40 dB(A); and b) night (10:00 pm to 7:00 am) — internal $L_{Aeq(15\ minute)}$: 35 dB(A). The mitigation measures must be outlined in the Noise and Vibration CEMP sub-plan, including in any Out-of-Hours Work Protocol, required by Condition E72.	**Section 4.2.3**
E76	Noise generating work in the vicinity of community, religious, educational institutions, noise and vibration-sensitive businesses and critical working areas (such as exam halls, theatres, laboratories and operating theatres) resulting in noise levels above the NMLs must not be timetabled during sensitive periods, unless other reasonable arrangements with the affected institutions are made at no cost to the affected institution.	**Section 8.0**
E77	At no time can noise generated by construction exceed the National Standard for exposure to noise in the occupational environment of an eight-hour (8hr) equivalent continuous A-weighted sound pressure level of $L_{Aeq,8h}$ of 85 dB(A) for any employee working at a location near the CSSI.	**Section 8.6**
E78	Construction Noise and Vibration Impact Statements (CNVIS) must be prepared for work that may exceed the noise management levels, vibration criteria and/or ground-borne noise levels specified in Condition E74 and Condition E75 at any residence outside construction hours identified in Condition E69, or where receivers will be highly noise affected. The CNVIS must include specific mitigation measures identified through consultation with affected sensitive land use(s) and the mitigation measures must be implemented for the duration of the works. A copy of the CNVIS must be provided to the AA and ER prior to the commencement of the associated works. The Planning Secretary may request a copy/ies of CNVIS.	**This report, Section 8.5**
E79	Owners and occupiers of properties at risk of exceeding the screening criteria for cosmetic damage must be notified before work that generates vibration commences in the vicinity of those properties. If the potential exceedance is to occur more than once or extend over a period of 24 hours, owners and occupiers are to be provided a schedule of potential exceedances on a monthly basis for the duration of the potential exceedances, unless otherwise agreed by the owner and occupier. These properties must be identified and considered in the Noise and Vibration CEMP Sub-plan required by Condition C8 and the Community Communication Strategy required by Condition B1.	**Section 8.0**
E80	Vibration testing must be undertaken before and during vibration generating activities that have the potential to impact on heritage items to identify minimum working distances to prevent cosmetic damage. In the event that the vibration testing and attended monitoring shows that the preferred values for vibration are likely to be exceeded, the construction methodology must be reviewed and, if necessary, additional mitigation measures implemented.	**Section 6.1, Section 8.0**
E81	Advice from an independent heritage specialist must be sought on methods and locations for installing equipment used for vibration, movement and noise monitoring at heritage-listed structures. *Note: The heritage specialist is to provide advice prior to installing equipment that may impact the heritage significance or structural integrity of the heritage listed structures.*	**Section 8.0**
E83	All work undertaken for the delivery of the CSSI, including those undertaken by third parties (such as utility relocations), must be coordinated to ensure respite periods are provided. This must include:	**Section 8.0, Section 8.2**

Docusign Envelope ID: 48BDB7AD-A0C7-8AA6-807F-DA2CDEDCBD18

CoA	Requirement	Reference
	a) rescheduling work to provide respite to impacted noise sensitive land use(s) so that the respite is achieved; or b) the provision of alternative respite or mitigation to impacted noise sensitive land use(s); and c) the provision of documentary evidence to the AA in support of any decision made in relation to respite or mitigation. The consideration of respite must also include all other CSSI, SSI and SSD projects which may cause cumulative and/or consecutive impacts at receivers affected by the delivery of the CSSI.	
E119	The Proponent must coordinate Work with adjoining Inland Rail Projects, including any work to relocate or connect utilities, to minimise cumulative and consecutive noise and vibration impacts and maximise respite for affected sensitive land uses. Coordination and mitigation measures must be detailed in the Construction Noise and Vibration management Sub-plan required by Condition C9.	**Section 8.0, Section 8.2, Section 9.0**
E122	Property damage caused directly or indirectly (for example from vibration or from groundwater change) by the construction or operation must be rectified at no cost to the owner. Alternatively, compensation may be provided for the property damage as agreed with the property owner.	**Section 6.1**

Docusign Envelope ID: 48BDB7AD-A0C7-8AA6-807F-DA2CDEDCBD18

1.0 Introduction

SLR Consulting Australia Pty Ltd (SLR) has been engaged by Martinus Rail (MR) to prepare a construction noise and vibration impact statement (CNVIS) for the Junee Yard precinct work in the Junee, NSW. These sites form part of the Albury to Illabo (A2I) section of Inland Rail (the Project).

This assessment has been prepared in accordance with the Construction Noise and Vibration Management Plan (CNVMP) for the A2I section of the Project.

This report assesses the potential construction noise and vibration impacts for the work associated with the Junee Yard precinct sites. An explanation of the specialist acoustic terminology used in this report is provided in **Appendix A**.

2.0 Project Description

Inland Rail is an approximate 1,600 kilometres (km) freight rail network that will connect Beveridge and Kagaru via regional Victoria, New South Wales and Queensland. The Inland Rail route would involve using approximately 1,000 km of existing track (with enhancements and upgrades where necessary) and 600 km of new track, passing through 30 local government areas. Inland Rail will accommodate double-stacked freight trains up to 1,800 metres (m) long and 6.5 m high.

The Albury to Illabo (A2I) section (the Project) forms a key component of the Inland Rail program. It is a 185 km section of existing rail corridor located in regional NSW between the towns of Albury and Illabo. Works would include track realignment, lowering and/or modification within the existing rail corridor, modification, removal or replacement of bridge structures (rail, road and/or pedestrian bridges), raising or replacing signal gantries, level-crossing modifications and other associated works. This CNVIS is associated with the Junee Yard precinct enhancement sites.

Relevant noise and vibration conditions from the Conditions of Approval (CoA) are detailed within the compliance table at the beginning of this document and will be complied with during the work.

2.1 Scope of this CNVIS

The focus of this CNVIS is the work associated with the Junee Yard precinct. Work at these sites will be conducted across three main site areas and includes:

- Site Establishment / Demobilisation
- Compound Operation
- Geotechnical Investigation
- Driver change platform works
- Track Work including subsequent track tamping works
- Gantry Removal
- Signalling Work and signalling cable installation
- Pedestrian Bridge Removal

Further details of work activities are outlined in **Section 5.1**. The work areas are surrounded by a combination of residential, commercial, industrial, educational and medical receivers. Additionally, there are several childcare centres, places of worship, hotels, libraries and public buildings at various setbacks from the main areas of work. The Project location, work areas and surrounding receivers are shown in **Figure 1**.

Docusign Envelope ID: 48BDB7AD-A0C7-8AA6-807F-DA2CDEDCBD18

2.2 Hours of work

In accordance with the Construction Noise and Vibration Management Plan (CNVMP) and CoA E69 construction work must be undertaken within the approved standard construction hours:

a) 7:00am to 6:00pm Monday to Friday, inclusive;

b) 7:00am to 6:00pm Saturday and

c) At no time on Sundays or public holidays.

2.2.1 Highly Noise Intensive Work

As outlined in the CoA E70, any highly noise intensive works that result in an exceedance of the applicable NML at the same receiver must only be undertaken:

a) Between 08:00am – 06:00pm Monday to Friday;

b) Between 08:00am – 01:00pm Saturday; and

c) If continuously, then not exceeding (3) hours, with a maximum cessation of work of not less than one hour.

The CoA defines ‘highly noise intensive works’ as those identified as annoying under the Interim Construction Noise Guideline (ICNG) and include:

- Use of power saws, such as used for cutting timber, rail lines, masonry, road pavement or steel work;
- Grinding metal, concrete or masonry;
- Rock drilling;
- Line drilling;
- Vibratory rolling;
- Bitumen milling or profiling;
- Jackhammering, rock hammering or rock breaking;
- Impact piling; and
- Tamping (for rail projects).

2.3 Variation to hours of work

Notwithstanding CoA E69 and E70, work may be undertaken outside the hours specified in the following CoA E71 circumstances (a, b, or c):

a) Safety and Emergencies

b) Work, that meets specific criteria

c) By Approval

Note: refer to **Compliance Table** for further detail.

Docusign Envelope ID: 48BDB7AD-A0C7-8AA6-807F-DA2CDEDCBD18

2.4 Justification of Out of Hours Work (OOHW)

Work activities that may be required or proposed to be undertaken outside of standard working hours will be managed in accordance with the OOHW Protocol as defined in CoA E72 and E73, unless the work is regulated by an EPL.

All work on or adjacent to roads would be carried out in accordance with a relevant Traffic Control Plan (TCP), Road Occupancy Licence (ROL) and/or rail possession to facilitate safe work near live road/rail traffic. Where an ROL/rail possession cannot be obtained for the approved project hours and/or proposed works cannot be undertaken safely during these hours, some works will be required to be undertaken outside of standard hours (ie Out of Hours Work, OOHW).

As outlined in the ICNG, work undertaken on public infrastructure may need to be undertaken outside the recommended standard hours. For this project the need is based on a requirement to sustain the operational integrity of public infrastructure, as works to restore operation of the infrastructure provide benefit to the greater community (ie more than just local residents).

Further detail around the specific work tasks, duration and justification of OOHW must be identified in the OOHW permit, required by the OOHW Protocol or EPL.

3.0 Existing Environment

The existing ambient noise environment was described in Environmental Impact Statement (EIS), Technical Paper 6 – Noise and Vibration (Non-Rail) for the Albury to Illabo project. This section provides details of the existing ambient noise environment relevant to the Junee Yard precinct.

The noise catchment area (NCA) used are consistent with the NCAs described in the EIS and are shown in **Figure 1** with the receiver classifications and approximate noise monitoring location.

A detailed land use survey was undertaken in August 2024 to confirm sensitive land uses within the project area, results of the land use survey have been incorporated into the receiver classifications shown in **Figure 1.**

3.1 Background Noise Levels

Background noise levels have been referenced from the baseline noise survey undertaken as part of the EIS and reproduced in the CNVMP. The background noise levels relevant to the Junee Yard precinct works are summarised in **Table 1**.

Table 1 Background Noise Levels

Noise Monitoring Location	NCA	Rating background Level (RBL) dBA NPfI defined time periods[1]		
		Daytime period	Evening period	Night-time period
14	NCA14	42	42[2] (45)	35

Note 1: The assessment periods are the daytime which is 7 am to 6 pm Monday to Saturday and 8 am to 6 pm on Sundays and public holidays, the evening which is 6 pm to 10 pm, and the night-time which is 10 pm to 7 am on Monday to Saturday and 10 pm to 8 am on Sunday and public holidays. See the NSW EPA Noise Policy for Industry (NPfI).

Note 2: The evening RBL data has been reduced to the daytime period RBL in this case (bracketed figures indicates the measured value).

4.0 Assessment Criteria

4.1 Construction Noise and Vibration Guidelines

The standards and guidelines relevant to the Project are listed in **Table 2**. These guidelines aim to protect the community and environment from excessive noise and vibration impacts during construction of projects.

Table 2 Construction Noise and Vibration Standards and Guidelines

Guideline/Policy Name	Where Guideline Used
Inland Rail NSW Construction Noise and Vibration Framework (CNVF)	Assessment and management protocols for airborne noise, ground-borne noise and vibration impacts for construction of NSW Inland Rail projects
Interim Construction Noise Guideline (ICNG) (DECC, 2009)	Assessment of airborne noise impacts on sensitive receivers
Environmental Criteria for Road Traffic Noise (ECRTN) (EPA, 1999)	Contains guidance for assessing potential sleep disturbance impacts
Road Noise Policy (RNP) (DECCW, 2011)	Assessment of construction traffic impacts
BS 7385 Part 2-1993 Evaluation and measurement for vibration in buildings Part 2, BSI, 1993	Assessment of vibration impacts (structural damage) to non-heritage sensitive structures
DIN 4150:Part 3-2016 Structural vibration – Effects of vibration on structures, Deutsches Institut für Normung, 2016	Screening assessment of vibration impacts (structural damage) to heritage sensitive structures, where the structure is found to be unsound
Assessing Vibration: a technical guideline (DEC, 2006)	Assessment of vibration impacts on sensitive receivers
AS2187.2:2006 Explosives – Storage and use Part 2: Use of explosives	Assessment of impacts from blasting activities
*Construction Noise and Vibration Guideline (Public Transport Infrastructure) (*CNVG-PTI) (Transport for NSW, 2023)	Utilised for minimum working distances for vibration intensive work.

4.2 Noise Management Levels

The noise management levels (NMLs) for residential and other sensitive receivers have been adopted from the CNVMP, as determined in the EIS. Receiver types and locations are shown **Figure 1**.

4.2.1 Residential Receivers

Project-specific NMLs for residential receivers were determined for NCA14 which encompasses all assessable receivers in close proximity to the Junee Yard precinct. NMLs for other sensitive receivers are fixed values adopted from the Interim Construction Noise Guideline (ICNG) (DECC, 2009) and outlined in the CNVMP. Residential NMLs for NCA014 surrounding the Junee Yard work sites are shown in **Table 3**.

Docusign Envelope ID: 48BDB7AD-A0C7-8AA6-807F-DA2CDEDCBD18

Table 3 Residential Noise Management Levels

NCA	Noise Management Level ($L_{Aeq(15minute)}$ - dBA)				Sleep disturbance Screening Level (RBL +15dB or 52 dB)	Sleep Awakening Reaction Level
	Approved Hours (RBL +10dB)	Out of Hours[1]				
		Daytime (RBL +5dB)	Evening (RBL +5dB)	Night-time (RBL +5dB)		
NCA14	52	47	47	40	52	65

Note 1: Approved Construction Hours are Monday to Saturday 7 am to 6 pm, as defined in CoA E69.

Note 2: Work outside of the Approved Hours is defined as OOHW = Out of Hours Work. Daytime out of hours is Sunday and public holidays between 8 am to 6 pm. Evening is 6pm to 10pm Monday – Sunday (including public holidays). Night-time is 10pm to 7am Monday – Saturday and 10pm to 8am Sunday (including public holidays).

Highly Noise Affected

In addition to the NMLs presented above, the ICNG highly noise affected level (>75 dBA) represents the point above which there may be strong community reaction to noise and is applicable to all residential receivers during approved project hours as outlined in the CNVMP and the ICNG.

Sleep Disturbance

Where the sleep disturbance screening level (RBL + 15 dB or 52 dB, whichever is greater, see **Table 3**) is exceeded, further assessment is required to determine whether the 'awakening reaction' level of L_{Amax} 65 dBA (external) would be exceeded and the likely number of these events. The awakening reaction level is the level above which residents are likely to be awoken from sleep.

4.2.2 Other Sensitive Land Uses and Commercial Receivers

The ICNG NMLs for 'other sensitive' non-residential land uses are shown in **Table 4**.

The ICNG references *AS2107:2016 Acoustics – Recommended design sound levels and reverberation times for building interiors* for criteria for 'other sensitive' receivers which are not listed in the guideline. Neither the ICNG nor AS2107 provide criteria for child care centres so the Association of Australian Acoustical Consultants *Guideline for Child Care Centre Acoustic Assessment* (GCCCAA) has been referenced.

Table 4 NMLs for 'Other Sensitive' Receivers

Land Use	Noise Management Level $L_{Aeq(15minute)}$ (dB) (Applied when the property is in use)	
	Internal	External
ICNG 'Other Sensitive' Receivers		
Classrooms at schools and other educational institutions	45	55[1]
Hospital wards and operating theatres	45	65[2]
Places of worship	45	55[1]
Active recreation areas (characterised by sporting activities which generate noise)	-	65
Passive recreation areas (characterised by contemplative activities that generate little noise)	-	60
Commercial	-	70

Docusign Envelope ID: 48BDB7AD-A0C7-8AA6-807F-DA2CDEDCBD18

Land Use	Noise Management Level $L_{Aeq(15minute)}$ (dB) (Applied when the property is in use)	
	Internal	External
Industrial	-	75
Non-ICNG 'Other Sensitive' Receivers		
Hotel – daytime & evening[3]	50	60[1,5]
Hotel – night-time[3]	35	45[1,5]
Child care centres – activity areas[4]	40	50[1,5]
Child care centres – sleeping areas[4]	35	45[1,5]
Library[3]	45	55[1]
Public Building[3]	50	60[1]
Aged Care	Considered as Residential	

Note 1: It is assumed that these receivers have windows partially open for ventilation which results in internal noise levels being around 10 dB lower than the external noise level.

Note 2: It is assumed that these receivers have fixed windows which conservatively results in internal noise levels being around 20 dB lower than the external noise level.

Note 3: Criteria taken from AS2107.

Note 4: Criteria taken from Association of Australian Acoustical Consultants Guideline for Child Care Centre Acoustic Assessment.

Note 5: Some receivers near highways or rail lines may have building façade mitigation and air-conditioning. Where evidence is provided a 20dB reduction from external to internal may be adopted.

4.2.3 Ground-borne Noise

Construction work can cause ground-borne (structure-borne or regenerated) noise impacts in nearby buildings when vibration intensive equipment is in use, such as during tunnelling or excavation work using tunnel boring machines, roadheaders or rockbreakers. Vibration can be transmitted through the ground and into nearby buildings, which can then create audible noise impacts inside the building.

Ground-borne noise NMLs are applicable where ground-borne noise levels are likely to be higher than airborne noise levels, which can occur where work is underground or where surface work is shielded by noise barriers, other structures or façade mitigation at the receiver. Ground-borne noise is generally found to generate impacts during the evening and night-time periods when ambient noise levels are often much lower, and ground-borne noise is more prominent.

The internal ground-borne noise NMLs for residential receivers are shown in **Table 5**.

Table 5 Internal ground-borne NMLs

Receiver Type	Noise Management Level ($L_{Aeq(15minute)}$ – dBA)		
	Daytime[1]	Evening[2]	Night-time[2]
Residential	n/a	40	35

Note 1: Daytime ground-borne noise NMLs are not specified in the ICNG of CoA.

Note 2: Specified in the ICNG and CoA E75.

For other sensitive receivers, the ICNG does not provide guidance in relation to acceptable ground-borne noise levels. For the purpose of this CNVIS, the internal airborne NMLs presented in **Table 4** will also be adopted for ground-borne noise.

Docusign Envelope ID: 48BDB7AD-A0C7-8AA6-807F-DA2CDEDCBD18

4.3 Vibration Criteria

The effects of vibration from construction work can be divided into three categories:

- Those in which the occupants of buildings are disturbed (**human comfort**). People can sometimes perceive vibration impacts when vibration generating construction work is located close to occupied buildings. Vibration from construction work tends to be intermittent in nature and the EPA's Assessing Vibration: a technical guideline (2006) (AV:ATG) provides criteria for intermittent vibration based on the Vibration Dose Value (VDV), as shown in **Table 6**. While the construction activities for the proposal are generally not expected to result in continuous or impulsive vibration impacts, corresponding criteria are provided in **Table 7**.
- Those where building contents may be affected (**building contents**). People perceive vibration at levels well below those likely to cause damage to building contents. For most receivers, the human comfort vibration criteria are the most stringent and it is generally not necessary to set separate criteria for vibration effects on typical building contents. Exceptions to this can occur when vibration sensitive equipment, such as electron microscopes or medical imaging equipment, are in buildings near to construction work. No such equipment has been identified in the study area.
- Those where the integrity of the building may be compromised (**structural/cosmetic damage**). If vibration from construction work is sufficiently high it can cause cosmetic damage to elements of affected buildings. Industry standard cosmetic damage vibration limits are specified in British Standard BS 7385 and German Standard DIN 4150. The limits are shown in **Table 8** and **Table 9**.

Table 6 Human Comfort Vibration – Vibration Dose Values for Intermittent Vibration

Building Type	Assessment Period	Vibration Dose Value[1] ($m/s^{1.75}$)	
		Preferred	Maximum
Critical Working Areas (eg operating theatres or laboratories)	Day or night-time	0.10	0.20
Residential	Daytime	0.20	0.40
	Night-time	0.13	0.26
Offices, schools, educational institutions and places of worship	Day or night-time	0.40	0.80
Workshops	Day or night-time	0.80	1.60

Note 1: The VDV accumulates vibration energy over the daytime and night-time assessment periods, and is dependent on the level of vibration as well as the duration.

Docusign Envelope ID: 48BDB7AD-A0C7-8AA6-807F-DA2CDEDCBD18

Table 7 Human Comfort Vibration – Preferred and Maximum Weighted Root Mean Square Values for Continuous and Impulsive Vibration Acceleration (m/s^2) 1–80 Hz

Location	Assessment period	Preferred values		Maximum values	
		z-axis	x- and y-axis	z-axis	x- and y-axis
Continuous vibration					
Residential	Daytime	0.010	0.0071	0.020	0.014
	Night-time	0.007	0.005	0.014	0.010
Offices, schools, educational institutions and places of worship	Day or night-time	0.020	0.014	0.040	0.028
Workshops	Day or night-time	0.04	0.029	0.080	0.058
Impulsive vibration					
Residential	Daytime	0.30	0.21	0.60	0.42
	Night-time	0.10	0.071	0.20	0.14
Offices, schools, educational institutions and places of worship	Day or night-time	0.64	0.46	1.28	0.92
Workshops	Day or night-time	0.64	0.46	1.28	0.92

Table 8 Cosmetic Damage – BS 7385 Transient Vibration Values for Minimal Risk of Damage

Group	Type of Building	Peak Component Particle Velocity in Frequency Range of Predominant Pulse	
		4 Hz to 15 Hz	15 Hz and Above
1	Reinforced or framed structures. Industrial and heavy commercial buildings	50 mm/s at 4 Hz and above	
2	Unreinforced or light framed structures. Residential or light commercial type buildings	15 mm/s at 4 Hz increasing to 20 mm/s at 15 Hz	20 mm/s at 15 Hz increasing to 50 mm/s at 40 Hz and above

Note 1: Where the dynamic loading caused by continuous vibration may give rise to dynamic magnification due to resonance, especially at the lower frequencies where lower guide values apply, then the guide values may need to be reduced by up to 50%.

Table 9 Cosmetic Damage – DIN 4150 Guideline Values for Short-term Vibration on Structures

Group	Type of Structure	Guideline Values Vibration Velocity (mm/s)				
		Foundation, All Directions at a Frequency of			Topmost Floor, Horizontal	Floor Slabs, Vertical
		1 to 10 Hz	10 to 50 Hz	50 to 100 Hz	All frequencies	All frequencies
1	Buildings used for commercial purposes, industrial buildings and buildings of similar design	20	20 to 40	40 to 50	40	20
2	Residential buildings and buildings of similar design and/or occupancy	5	5 to 15	15 to 20	15	20

Docusign Envelope ID: 48BDB7AD-A0C7-8AA6-807F-DA2CDEDCBD18

Group	Type of Structure	Guideline Values Vibration Velocity (mm/s)				
		Foundation, All Directions at a Frequency of			Topmost Floor, Horizontal	Floor Slabs, Vertical
		1 to 10 Hz	10 to 50 Hz	50 to 100 Hz	All frequencies	All frequencies
3	Structures that, because of their particular sensitivity to vibration, cannot be classified as Group 1 or 2 **and** are of great intrinsic value (eg heritage listed buildings)	3	3 to 8	8 to 10	8	20[1]

Note 1: It may be necessary to lower the relevant guideline value markedly to prevent minor damage.

4.3.1 Heritage Buildings or Structures

Heritage listed buildings and structures should be considered on a case-by-case basis but BS 7385 notes that buildings of historical value should not be assumed to be more sensitive to vibration, unless structurally unsound. Where a heritage building is deemed to be sensitive, the more stringent DIN 4150 Group 3 guideline values in **Table 9** can be applied.

Heritage Structures

Table 10 includes heritage structures from the State Heritage Register and Local Heritage Items from the Local Environment Plan that are within close proximity to the construction work areas for Junee Yard Precinct.

Table 10 Heritage Items Nearby Construction Work Areas

Heritage Item	Listing	Construction/Condition
Junee Station, Yard, and Locomotive Depot[1]	State Heritage Register 01173	The Junee Railway Station comprises a highly symmetrical, single storey building. The Junee Locomotive Depot/Roundhouse comprises a circular brick building split into two 'halves', with the internal structure laid out in a radial pattern from a central turntable.
Junee Railway refreshment rooms	Local Environmental Plan I10, State Heritage Register 01173	
Junee Court House[2]	Local Environmental Plan I3	Brick Court House and adjoining office wing in red brick laid in English bond with tuck pointed lower levels. The building has a gabled roof clad with corrugated iron, moulded chimneys and timber verandah at either side with decorative brackets to posts. Very high architectural quality.
Junee Post Office[2]	Stage Heritage Register 01425, Local Environmental Plan I6	The Junee Post Office a two storey building built of brick; the walls (with the exception of those at the rear) have been painted. The main roof is hipped and clad with corrugated iron. Three chimneys of face brick have render to their bases and moulded tops. Paired, decorative brackets support the eaves. There are brick flat arches over the windows, and there is slight emphasis to the window sills. Façade verandah to the ground floor has a low pitch roof clad with iron and paired cast iron posts. Generally in good condition, Paint work is good / well maintained.
Commercial Hotel[2]	Local Environmental Plan I5	Two storey hotel and verandah with four retail units at corner street location. Brick and render parapet with mouldings and tiles to base of external walls. Very high architectural quality
Former Westpac Bank, Bank of NSW[2]	Local Environmental Plan I4	Building has an elaborate shaped brick and plastered parapet over main entrance. Very high architectural quality.

Docusign Envelope ID: 48BDB7AD-A0C7-8AA6-807F-DA2CDEDCBD18

Heritage Item	Listing	Construction/Condition
The Loftus[2]	Local Environmental Plan I7	Two storey brick and stucco building, with first floor balcony / awning over footpath. Listed to be in "excellent" physical condition.

Note 1 The Junee Locomotive Depot/Roundhouse (adjacent to Roedigers Lane) is beyond 400 m south of the closest Junee Yard Precinct work area, near Kemp Street.

Note 2 Description of construction/condition is provided in the NSW Government State Heritage Inventory

A large area around Junee Station, which includes industrial, residential and other-sensitive receivers, are part of the Junee Conservation Area. The Commercial Hotel, Junee Railway refreshment rooms, Former Westpac Bank, Junee Court House and The Loftus are within the Junee Conservation Area.

Further information on some of the heritage items in **Table 10** are provided in the Construction Cultural Heritage Management Plan (CCHMP). No structures nearby the work areas identified in this CNVIS are flagged as structurally unsound in the CCHMP.

Pre and post-condition surveys of heritage structures are to be conducted when relevant (ie if the heritage buildings are within the minimum working distances for heritage items for nominated vibration-intensive equipment) refer to **Section 4.3.3** and **Section 6.1**.

4.3.2 Buried Pipework and Utilities

The German Standard DIN 4150-3:1999 "Structural Vibration Part 3: Effects of vibration in structures" provides guideline values for evaluating the effect of vibration on buried pipework. The values are based on the assumption that pipes have been manufactured and laid using current technology. Additional considerations may be required at junctions. The recommended limits for short term vibration to ensure minimal risk of damage are presented numerically in **Table 11**.

Table 11 Guideline Values for Short Term Vibration on Buried Pipework

Line	Pipe Material	Guideline value at the Pipe[1,2] (PPV mm/s)
1	Steel (including welded pipes)	100
2	Clay, concrete, reinforced concrete, pre stressed concrete, metal (with or without flange)	80
3	Masonry, plastic[3]	50

Note 1: Mounting equipment directly onto pipes may not be possible. If the vibration source is not immediately next to the pipework, measurements can be made on the ground surface to obtain an estimate. Generally, this vibration level will be greater than the level measured directly on the pipework.

Note 2: The guideline values may be reduced by 50% without further analysis when evaluating the effects of long-term vibration on buried pipework.

Note 3: Drainpipes shall be evaluated using the values given for Line 3.

Buried Pipework and Utilities

No buried pipework or utilities have been identified in this CNVIS at risk of impact from vibration. Therefore, no additional consideration or assessment has been undertaken in relation to buried pipework and utilities. Where buried pipework or utilities are uncovered during works, they should be identified and managed in accordance with the measures outlined in the CNVMP.

4.3.3 Minimum Working Distances for Vibration Intensive Work

Minimum working distances for typical vibration intensive construction equipment have been sourced from the Transport for NSW (TfNSW) Construction Noise and Vibration Guideline

Docusign Envelope ID: 48BDB7AD-A0C7-8AA6-807F-DA2CDEDCBD18

(Public Transport Infrastructure) (CNVG-PTI) and are shown in **Table 12**. The minimum working distances are for both cosmetic damage (from BS 7385 and DIN 4150) and human comfort (from the NSW EPA Assessing Vibration: a technical guideline). They are calculated from empirical data which suggests that where work is further from receivers than the quoted minimum distances then impacts are not considered likely.

The minimum working distances listed in the CNVG were used to derive the minimum working distances required for cosmetic damage to industrial and heavy commercial buildings (also reinforced or framed structures). The following pseudo-power law relationship has been used in the derivations:

$$V_2 = V_1 \times \left(\frac{D_1}{D_2}\right)^B$$

where a site exponent value of B = 1.6 is adopted for the calculations, as per AS2187.2:2006

Table 12 Recommended Minimum Working Distances from Vibration Intensive Equipment

Plant Item	Rating/Description	Minimum Distance			
		Cosmetic Damage			Human Response (NSW EPA Guideline)[2]
		Residential and Light Commercial (BS 7385)	Heritage Items[1] (DIN 4150, Group 3)	Industrial and Heavy Commercial (BS 7385)	
Vibratory Roller	<50 kN (1–2 tonne)	5 m	11 m	3 m	15 m to 20 m
	<100 kN (2–4 tonne)	6 m	13 m	3 m	20 m
	<200 kN (4–6 tonne)	12 m	25 m	6 m	40 m
	<300 kN (7–13 tonne)	15 m	31 m	8 m	100 m
	>300 kN (13–18 tonne)	20 m	40 m	10 m	100 m
	>300 kN (>18 tonne)	25 m	50 m	12 m	100 m
Small Hydraulic Hammer	300 kg (5 to 12 t excavator)	2 m	5 m	1 m	7 m
Medium Hydraulic Hammer	900 kg (12 to 18 t excavator)	7 m	15 m	4 m	23 m
Large Hydraulic Hammer	1,600 kg (18 to 34 t excavator)	22 m	44 m	11 m	73 m
Vibratory Pile Driver	Sheet piles	2 m to 20 m	5 m to 40 m	1 to 10 m	20 m
Piling Rig – Bored	≤ 800 mm	2 m (nominal)	5 m	1 m	4 m
Jackhammer	Hand held	1 m (nominal)	3 m	1 m	2 m
Ballast Tamping[2]	N/A	5 m	10 m	3 m	30 m

Note 1: Minimum working distances for heritage items that have been identified as structurally unsound or otherwise particularly sensitive to vibration. These distances have been calculated based on the 2.5 mm/s PPV criteria from DIN 4150 and the cosmetic damage minimum working distances presented in the CNVG-PTI with reference to BS 7385.

Note 2: Based on SLR measurement data. The human response minimum working distance for Ballast Tamping is determined based on a residential night-time preferred VDV criterion.

Docusign Envelope ID: 48BDB7AD-A0C7-8AA6-807F-DA2CDEDCBD18

The minimum working distances are indicative and will vary depending on the particular item of equipment and local geotechnical conditions. The distances apply to cosmetic damage of typical buildings under typical geotechnical conditions.

4.4 Traffic on Surrounding Roads

The potential impacts from project related traffic on the surrounding public roads are assessed using the NSW EPA *Road Noise Policy* (RNP). An initial screening test is first applied to evaluate if existing road traffic noise levels are expected to increase by more than 2.0 dB. Where this is considered likely, further assessment is required using the RNP criteria shown in **Table 13**.

Table 13 RNP/NCG Criteria for Assessing Traffic on Public Roads

Road Category	Type of Project/Land Use	Assessment Criteria (dBA)	
		Daytime (7 am – 10 pm)	Night-time (10 pm – 7 am)
Freeway/ arterial/ sub-arterial roads	Existing residences affected by additional traffic on existing freeways/arterial/sub-arterial roads generated by land use developments	$L_{Aeq(15hour)}$ 60 (external)	$L_{Aeq(9hour)}$ 55 (external)
Local roads	Existing residences affected by additional traffic on existing local roads generated by land use developments	$L_{Aeq(1hour)}$ 55 (external)	$L_{Aeq(1hour)}$ 50 (external)

5.0 Noise Assessment

The potential construction noise levels from the Project have been predicted using ISO 9613:2 algorithm in SoundPLAN noise modelling software. The model includes ground topography, buildings and representative noise sources from the Project.

5.1 Work Scenarios

Noise modelling scenarios have been determined based on key Project noise generating stages, supplied by the Project team. A detailed description of each work scenario and the total sound power levels (L_W) are provided in **Table 14**.

A summary of construction work periods, schedule required for each scenario and the total sound power levels (Lw) are provided in **Table 15**. The locations of the various work scenarios are shown in **Figure 2**.

Docusign Envelope ID: 48BDB7AD-A0C7-8AA6-807F-DA2CDEDCBD18

Table 14 Work Scenario Descriptions

ID	Scenario	Description	Total Lw
W.001	Site Establishment / Demobilisation	Site Compound delivery and set up Laydown and haul road construction	115
W.002	Compound Operation	Operation of the site compound Delivery of materials/equipment	113
W.003	Geotechnical Investigation	Geotechnical Investigation	114
W.004	Driver Platform Surveys	Design and geotechnical investigations	113
W.005	Driver Platform Construction	Construction of driver platforms	116
W.006	Track Work - Peak	Track Work including highly noise intensive work	122
W.007	Track Work - Typical	Track Work excluding highly noise intensive work	117
W.008	Track Tamping	Tamping following track work	119
W.009	Gantry Removal	Gantry Removal	118
W.010	Signalling Work	Installation of Signalling Infrastructure	113
W.011	Pedestrian Bridge Removal	Removal of existing pedestrian bridge	119
W.012	Signalling Cable Works	Installation of new signalling cable route & signalling cable	112

Table 15 Scenarios and Periods of Work

ID	Scenario	Hours of Work				Indicative Start Date	Likely Duration[5]
		Approved Hours	Out-of-Hours Work[4]				
			Day OOH[1]	Evening[2]	Night[3]		
W.001	Site Establishment / Demobilisation	✓	✓	-	-	Feb-26	1 month
W.002	Compound Operation	✓	✓	✓	✓	Feb-26	6 months[6]
W.003	Geotechnical Investigation	✓	✓	-	-	Aug-26	1 month
W.004	Driver Platform Surveys	✓	-	-	-	Jul-25	1 week
W.005	Driver Platform Construction	✓	✓	✓	✓	Aug-25	2 months
W.006	Track Work - Peak	✓	✓	✓	✓	Aug-25	6 months[6]
W.007	Track Work - Typical	✓	✓	✓	✓	Aug-25	6 months[6]

W.009	Gantry Removal	✓	✓	✓	✓	Sep-26	1 month
W.010	Signalling Work	✓	✓	✓	✓	Sep-26	2 months
W.011	Pedestrian Bridge Removal	✓	✓	-	-	Feb-26	2 months
W.012	Signalling Cable Works	✓	✓	✓	✓	Sep-25	4 months

Note 1: Daytime out of hours is 8 am to 6 pm on Sunday and public holidays.

Note 2: Evening is 6 pm to 10 pm Monday – Sunday (including public holidays).

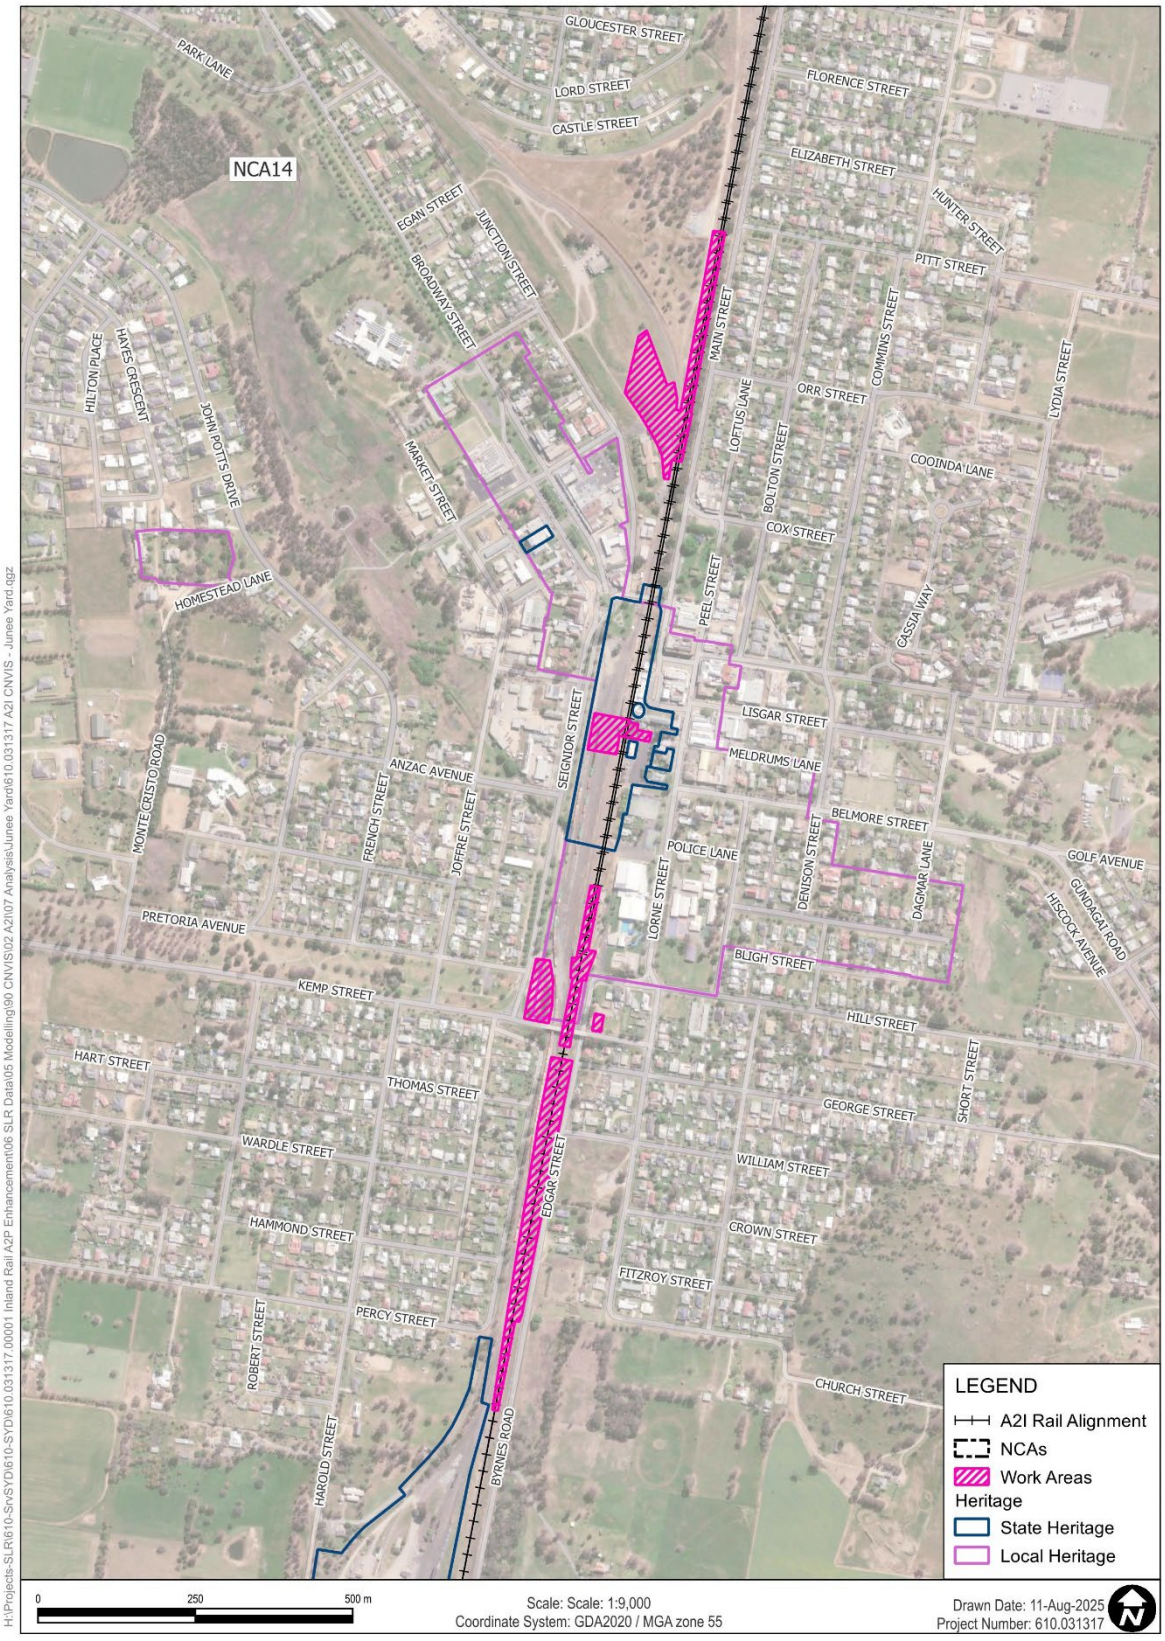

Note 3: Night is 10 pm to 7 am Monday – Saturday and 10pm to 8am Sunday (including public holidays).

Note 4: Where works are expected to occur outside of the standard working hours, further detail around the specific work tasks, duration and justification of OOHW must be identified in the OOHW permit, required by the OOHW Protocol or EPL.

Note 5: Works scenarios may occur simultaneously during enhancement works with works expected to be conducted over a six month period. Track work, track tamping and associated compound operation will be conducted during rail possessions over the six month period, however will not be conducted continuously during this period.

Docusign Envelope ID: 48BDB7AD-A0C7-8AA6-807F-DA2CDEDCBD18

Figure 2 Construction Work Locations

Docusign Envelope ID: 48BDB7AD-A0C7-8AA6-807F-DA2CDEDCBD18

5.1.1 Modelling Scenarios and Equipment

The assessment uses 'realistic worst-case' scenarios to determine the impacts from the noisiest 15-minute period that is likely to occur for each work scenario, as required by the ICNG. Sound power levels (LW) for the construction equipment used in the modelling are listed in **Appendix B**.

5.2 Predicted Noise Levels

The following overview is based on the predicted impacts at the most affected receivers and is representative of the worst-case noise levels that are likely to occur during construction.

The assessment shows the predicted 'mitigated' impacts based on the exceedance of the noise management levels, as per the categories in **Table 16**. The mitigation and management measures adopted for this CNVIS are provided in **Section 8.0**.

Table 16 Exceedance Bands and Impact Colouring

Subjective Classification	Exceedance of Noise Management Level		Impact Colouring
	Daytime	Out of Hours	
Negligible	No exceedance	No exceedance	
Noticeable	-	1 to 5 dB	
Clearly Audible	1 to 10 dB	6 to 15 dB	
Moderately Intrusive	11 to 20 dB	16 to 25 dB	
Highly Intrusive	> 20 dB	> 25 dB	

A summary of the number of buildings where NML exceedances were predicted for the various work scenarios is shown in **Table 17**. The number of receivers above the 'highly noise affected' (HNA) level are also included in the table. Maps of the predicted worst-case noise impacts are presented in **Appendix C**.

The assessment presents the combined predicted noise impacts for each scenario. Meaning, the worst-case result at each receiver is considered from all potential work areas where each scenario is to be undertaken.

The assessment is generally considered conservative as the calculations assume several items of construction equipment are in use at the same time within individual scenarios. As outlined in **Section 5.1.1,** the assessment uses 'realistic worst-case' scenarios to determine the impacts from the noisiest 15-minute period that is likely to occur for each work scenario.

The exceedances shown in **Table 17** are therefore representative of a 'realistic worst-case' 15-minute period, and are unlikely to occur for extended periods of time throughout the entire construction period at any given receiver.

The indicative work durations presented in **Table 15** represent a window of time where the scenarios could occur, and does not represent the entire duration of the exceedances shown in **Table 17**. In reality, there would frequently be periods when construction noise levels are much lower than the worst-case levels predicted as well as times when no equipment is in use and no noise impacts occur.

Docusign Envelope ID: 48BDB7AD-A0C7-8AA6-807F-DA2CDEDCBD18

Table 17 Overview of NML Exceedances

ID	Scenario	Number of Receivers																	
		HNA[1]	With NML exceedance (dB)[2]

Note 1: Highly noise affected, based on ICNG definition (i.e. predicted LAeq(15minute) noise at residential receiver is greater than 75 dBA).
Note 2: Based on worst-case predicted noise levels

Docusign Envelope ID: 48BDB7AD-A0C7-8AA6-807F-DA2CDEDCBD18

A summary of the predicted worst-case noise levels is shown below for each work area:

Residential Receivers

- 'Highly Intrusive' noise impacts are predicted at the closest residential receivers for all work scenarios during both the approved daytime and daytime OOHW periods with the exception of *W.009* and *W.011* where worst-case 'moderately intrusive' noise impacts are predicted at the closest residential receivers.
- 'Highly Intrusive' noise impacts are predicted for all work scenarios with the potential to occur during the evening and night-time period, with the exception of *W.009* during the evening period where worst-case 'moderately intrusive' noise impacts are predicted. The addresses of the residential receivers impacted by OOHW are provided in **Appendix D**.
    - Compound operations outlined in *W.002* are generally expected to be limited to approved daytime hours. OOHWs presented in **Table 17** are only expected when construction works are being undertaken under a rail possession.
- A single receiver closest to the Junction Street site compound (2 Crawley St) is predicted to be 'highly noise affected' (HNA) during work for scenarios *W.001* and *W.002*.
    - This receiver is also predicted to be HNA during signalling works during *W.010*.
- During peak track works including noise intensive plant (*W.006),* it is predicted that 20 residential receivers will be HNA. During typical track works without noise intensive plant (*W.007*), two receivers are predicted to be HNA.
- Seven receivers are also predicted to be HNA during track tamping works during *W.008.*
    - The HNA impacts predicted during *W.006* to *W.008* are expected be experienced when work occurs at the closest work location to each receiver. When work occurs further from these receivers, impacts are expected to be lower
- Noise levels are predicted to exceed the sleep disturbance screening level and sleep awakening criteria for all work scenarios occurring during the night-time period. Sleep disturbance impacts would generally be caused by heavy vehicle movements and more noise intensive equipment. Where reasonable and feasible, these activities should be limited to the less sensitive periods to avoid noise impacts during more sensitive out-of-hours periods (refer to **Section 8.0**). The number of awakening events would depend on several factors, including the equipment being used, the duration of noisy work and the distance of the work to each residential receiver. Further detail around the specific OOHW, (eg duration and justification) must be identified in the OOHW permit, refer **Section 2.4**.

Other Sensitive Receivers

- 'Moderately Intrusive' noise impacts are predicted from all work scenarios during approved daytime hours, except *W.004* and *W.012*, where worst-case 'clearly audible' noise impacts are predicted.
    - 'Highly intrusive' impacts are predicted at the nearest sensitive receivers during approved daytime hours for scenarios *W.006* to *W.008*.
- During the daytime OOH period, 'highly intrusive' impacts are predicted at the closest other sensitive receiver during *W.006* only.
    - 'Clearly audible' to 'Moderately intrusive' impacts are predicted at the nearest other sensitive receivers for all other scenarios during daytime OOHW period.

Docusign Envelope ID: 48BDB7AD-A0C7-8AA6-807F-DA2CDEDCBD18

- 'Moderately Intrusive' noise impacts are predicted to occur for *W.006* to *W.008* during the evening period, with no 'highly Intrusive' noise impacts predicted for all works scenarios occuring duirng this period.
    - 'Clearly audible' impacts are predicted during the evening period for *W.002, W.009* and *W.010*. No impacts are predicted at other sensitive receivers in the evening period during *W.005* and *W.012.*
- A single 'other sensitive' receiver is predicted to experience 'highly intrusive' noise levels during night-time hours for work scenarios *W.002* and *W.006* to *W.009*. Worst-case 'clearly audible' noise impacts are predicted during the night-time period for *W.005*, *W.010* and *W.012.*
    - The 'highly intrusive' noise impacts identified above during the night-time are predicted at the Locomotive Hotel, 1-5 Hill St, Junee.
- Other sensitive receivers should only be considered impacted 'when in use'.

Review of the predictions shows that both the sleep disturbance screening level and sleep awakening reaction level are likely to be exceeded when night work occurs near residential receivers. The receivers which would potentially be affected by sleep awakening impacts are generally the same receivers where 'moderately intrusive' and 'highly intrusive' night-time impacts have been predicted (refer to **Appendix C**). These receivers may be eligible for respite offers (RO), agreements with owners (AO) or alternative accommodation (AltA), refer **Section 8.3**.

Furthermore, for scenarios where 'highly intrusive' impacts are predicted, noisy activities will be scheduled during standard daytime hours, where feasible, to minimise disruption during OOHW periods. It is noted however, that OOH work will occur during a rail possession and will be undertaken within the limitations of the possession.

All appropriate feasible and reasonable construction noise mitigation measures will be applied to work as outlined in **Section 8.0**.

5.3 Ground-borne Noise

Ground-borne construction noise impacts from the Project are not anticipated as vibration intensive work with the potential to generate perceptible ground-borne noise, is not included in the scope of work. Vibration intensive work for the Project will be completed outdoors meaning airborne noise levels at the nearest receivers are expected to be higher than the corresponding internal ground-borne noise levels.

Where airborne noise levels are higher than ground-borne noise levels it is not necessary to evaluate potential ground-borne noise impacts and as such, they have not been considered further for this assessment.

Docusign Envelope ID: 48BDB7AD-A0C7-8AA6-807F-DA2CDEDCBD18

6.0 Vibration Assessment

Vibration intensive items of equipment that would be required during work assessed in this CNVIS include a vibratory roller, ballast tamper and hydraulic hammer. These items of equipment are required during the work as shown in **Table 18**.

The potential impacts during vibration intensive work have been assessed using the Transport CNVG-PTI minimum working distances for cosmetic damage and human response shown in **Table 18**.

Table 18 Vibration Intensive Equipment

ID	Scenario	Rating/Description	Minimum Distance			
			Cosmetic Damage			Human Response (NSW EPA Guideline)
			Residential and Light Commercial (BS 7385)	Heritage Items (DIN 4150, Group 3)	Industrial and Heavy Commercial (BS 7385)	
W.003	Geotechnical Investigation	Vibratory Roller (5rench): <50 kN (1–2 tonne)	5 m	11 m	3 m	15 m to 20 m
W.006	Track Work - Peak	Vibratory Roller: <300 kN (7–13 tonne)	15 m	31 m	8 m	100 m
W.008	Track Tamping	Ballast Tamping	5 m	10 m	3 m	30 m
W.011	Pedestrian Bridge Removal	Small Hydraulic Hammer: 300 kg (5 to 12 t excavator)	2 m	5 m	1 m	7 m

Vibration offset distances have been determined from the TfNSW CNVG-PTI minimum working distances for cosmetic damage and human comfort (see **Table 12** and the assessment is summarised in **Figure 3** to **Figure 6**). The offset distances are representative of the highest vibration levels that would likely be experienced by the nearest receivers when work occurs nearby.

For most construction activities, vibration emissions are intermittent in nature and for this reason, higher vibration levels occurring over shorter time periods are allowed.

In the event that additional work is undertaken which requires the use of other items of plant identified than those identified in **Table 18**, a vibration impact assessment must be conducted prior to the commencement of work.

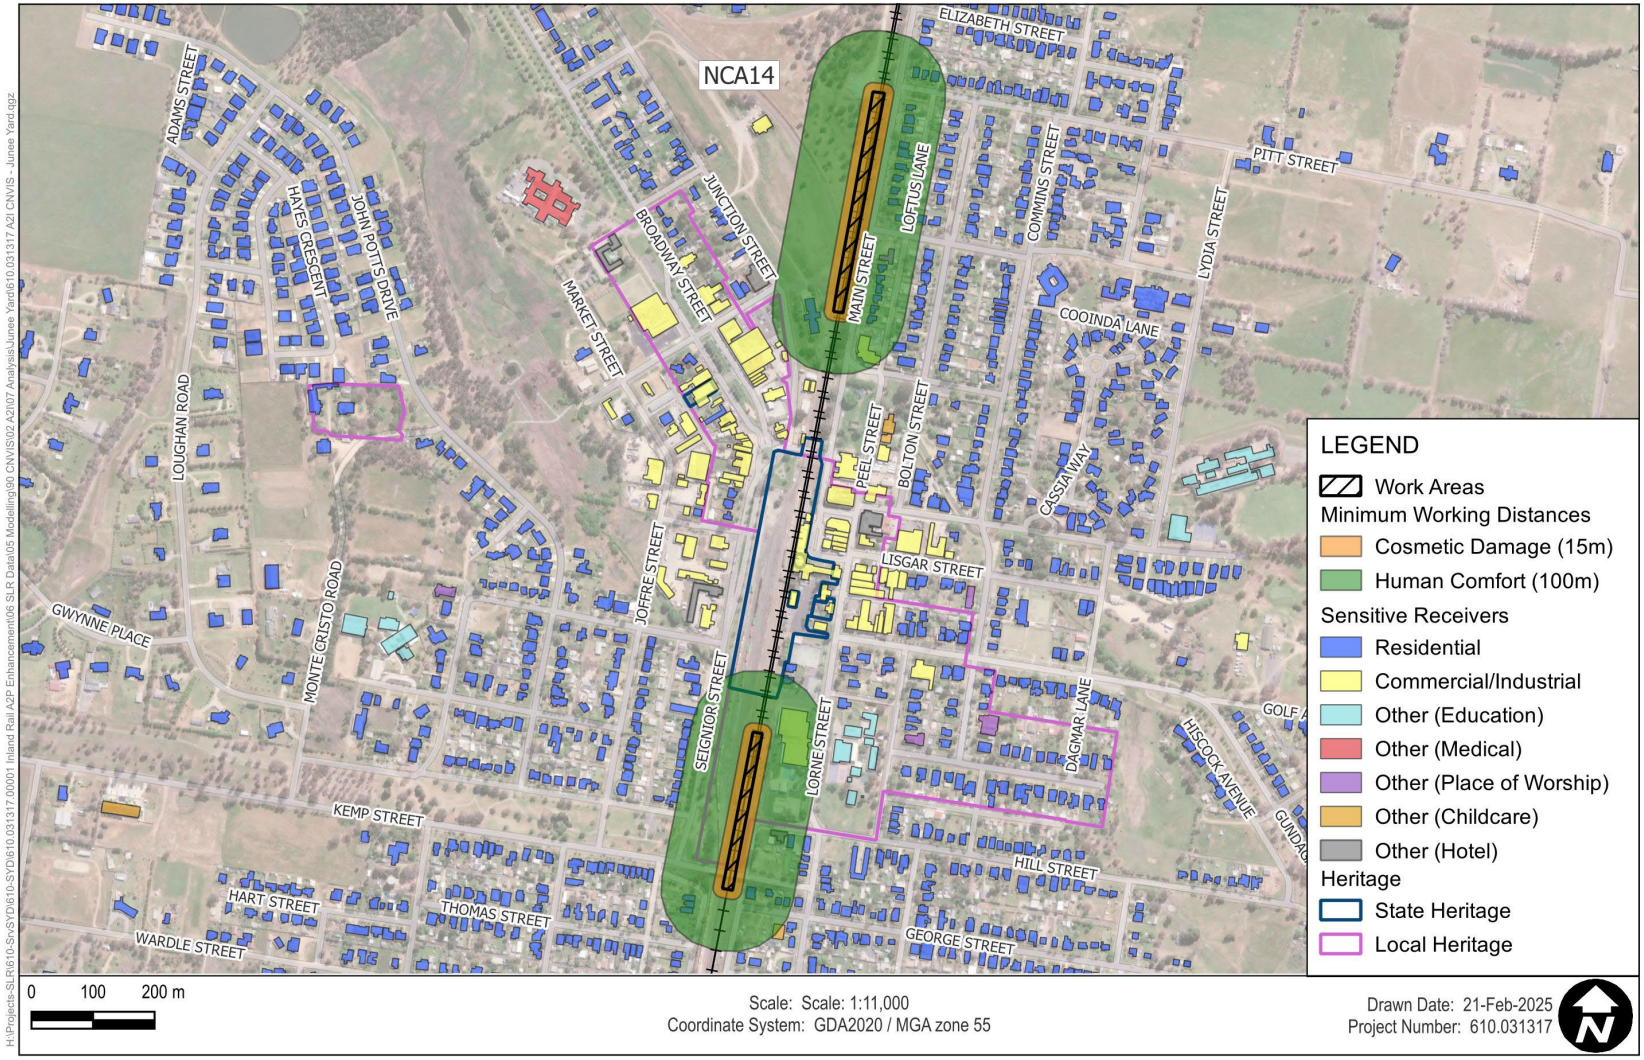

Docusign Envelope ID: 48BDB7AD-A0C7-8AA6-807F-DA2CDEDCBD18

Figure 3 Construction Vibration Minimum Working Distances – Vibratory Roller (Trench) <50 kN (1-2 tonne) (W.003)

Figure 6 Construction Vibration Minimum Working Distances – Small Hydraulic Hammer (300 kg) (W.011)

Docusign Envelope ID: 48BDB7AD-A0C7-8AA6-807F-DA2CDEDCBD18

6.1 Cosmetic Damage Assessment

Figure 4 shows that all nearby buildings are expected to fall outside the minimum working distance for cosmetic damage for trench rolling (vibratory) works required during *W.003* (**Figure 3**), vibratory rolling associated with peak track works *(W.006)* and ballast tamping required for *W.008* (**Figure 5**).

Figure 6 shows that Junee Railway Station is within the cosmetic damage minimum working distance for light commercial structures during the use of the hydraulic hammer in *W.011*. It is noted that the pedestrian bridge being removed in *W.011* is located on the Junee Station platform in close proximity to the Junee Station building.

Offset distances from specific vibration intensive plant to the nearest receivers and building construction should be confirmed before commencing vibration intensive work during construction.

Before commencement of any work, a structural engineer must undertake condition surveys of all building, structures, utilities and the like identified as being at risk of damage. For this CNVIS, conditions surveys are recommended for:

- Junee Railway Station.

After completion of construction, condition surveys must be undertaken by a structural engineer of all items for which pre-condition surveys were undertaken.

The results of the surveys must be documented in a Condition Survey Report for each item surveyed. Copies of Condition Survey Reports must be provided to the landowners of the items surveyed, and no later than one month before the commencement of construction and three months following the completion of construction.

Feasible and reasonable construction vibration mitigation measures should be applied where vibration intensive work is required within the minimum working distances. Construction vibration mitigation and management measures are discussed in **Section 8.0**.

In accordance with CoA E122, property damage caused directly or indirectly by the construction or operation must be rectified at no cost to the owner. Alternatively, compensation may be provided for the property damage as agreed with the property owner.

Docusign Envelope ID: 48BDB7AD-A0C7-8AA6-807F-DA2CDEDCBD18

Heritage Structures

The pedestrian bridge being removed connects the operational Down Platform with the disused Up Platform. As the Up platform is no longer in use, the footbridge is no longer required for its access and is required to be removed. The footbridge itself is not heritage listed but is viewed as part of the wider State heritage listed item for the Station, yard and locomotive depot. As discussed above, the Junee Railway Station building, listed on the State Heritage Register, falls within the minimum working distances for residential and light commercial buildings when using a hydraulic hammer during *W.011*.

As per CoA E80, vibration testing must be undertaken before and during vibration generating activities that have the potential to impact on heritage items to identify minimum working distances to prevent cosmetic damage. Advice must be sought on methods and locations for installing equipment as per CoA E81.

If other vibration intensive activities are required within minimum working distances to heritage structures, a building condition assessment should be undertaken of the heritage item/s to assess if they are considered to be sensitive to vibration prior to vibration work commencing.

6.2 Human Comfort Assessment

Figure 4 shows that receivers within close proximity of the works areas have the potential to fall within the human comfort minimum working distances when vibratory rollers are in use nearby in *W.006*. When a trench roller (vibratory) is in use during *W.003*, all receivers fall outside the human comfort minimum working distances as shown in **Figure 3**.

Figure 5 shows that the closest residential receivers fall within the human comfort minimum working distance for track tamping (*W.008*). The commercial structures and residences identified within the minimum working distances have been previously exposed to track tamping activities during standard periodic maintenance of the track.

Figure 6, shows that small areas of the Junee Railway Station buildings either side of the pedestrian bridge fall within the human comfort minimum working distance when a small hydraulic hammer is used during *W.011*.

The occupants of buildings discussed above may be able to perceive vibration impacts at times when vibration-sensitive equipment is in use nearby. Where impacts are perceptible, they would likely only be apparent for relatively short durations when vibration intensive equipment is in use nearby.

Feasible and reasonable construction vibration mitigation measures should be applied where vibration intensive work is required within the minimum working distances. Construction vibration mitigation and management measures are discussed in **Section 8.0**.

Docusign Envelope ID: 48BDB7AD-A0C7-8AA6-807F-DA2CDEDCBD18

7.0 Construction Traffic Assessment

The EIS identified that during the construction phase of the project, heavy vehicles would be required for materials and equipment delivery while light vehicles will transport workers to and from the site. This additional road traffic may impact receivers along the proposed transport routes.

No additional information has been provided regarding construction road traffic, therefore a summary of the predicted daytime traffic noise levels from the EIS is shown in **Table 19**.

Table 19 Construction Traffic Assessment

Traffic Route	Road Type	Predicted Construction Traffic Noise (Both Directions) LAeq (Period)		Exceed base criterion? Day[1] (7am – 10pm)	Potential Increase > 2dB	Potential Noise Impact
		Existing	Existing + Proposed			
Junee Precinct						
Junee Station, Junee Yard and Kemp Street Bridge						
Olympic Highway (west of Seignior Street)	Arterial	57.6	59	No	No	No
Seignior Street	Sub-arterial	52.7	54	No	No	No
Broadway Street	Arterial	53	54.1	No	No	No
Olympic Highway Level Crossing	Sub-arterial	50.9	52.5	No	No	No
Humphrys Street	Sub-arterial	43.1	45.8	No	Yes	No
Main Street (Olympic Highway)	Sub-arterial	42.8	45.5	No	Yes	No
Lorne Street	Local	56.4	57.5	Yes	No	No
Hill Street	Local	51.1	53.3	No	Yes	No
Joffre Street	Local	41.7	45.4	No	Yes	No
Harold Street	Local	53	54.8	No	No	No
Thomas Street	Local	40.5	45	No	Yes	No
Railway Lane	Local	40.2	43.9	No	Yes	No
Railway Parade	Local	40.2	43.9	No	Yes	No
William Street	Sub-arterial	39.6	44.2	No	Yes	No
Edgar Street	Arterial	47.3	49.5	No	Yes	No
Byrnes Road	Local	56.6	57.5	Yes	No	No
Pretoria Avenue	Local	40.6	45	No	Yes	No

Note 1: Freeway/arterial/sub-arterial roads: $L_{Aeq(15hour)}$ 60dBA(external)
Local roads: $L_{Aeq(1hour)}$ 55dBA (external)

Docusign Envelope ID: 48BDB7AD-A0C7-8AA6-807F-DA2CDEDCBD18

The EIS found that construction traffic associated with the Junee Yard Precinct on public roads complies with the road traffic noise goals during the daytime period.

The EIS did not assess construction traffic during the night-time period, and no additional information has been provided regarding construction road traffic. Therefore, it is conservatively assumed that where night-time construction traffic is required, impacts would be experienced by residences along construction routes on sub-arterial and local roads within close proximity to the work sites. Night-time noise impacts are not anticipated on arterial roads.

Traffic diversions are not proposed for the work assessed in this CNVIS. Extended traffic diversions are not expected for these works, and any necessary diversions will be confined to daytime hours. Should night-time diversions be required for construction activities, a more detailed assessment will be undertaken and provided.

Mitigation and management measures to assist in minimising noise impacts from construction traffic are shown in **Section 8.0**.

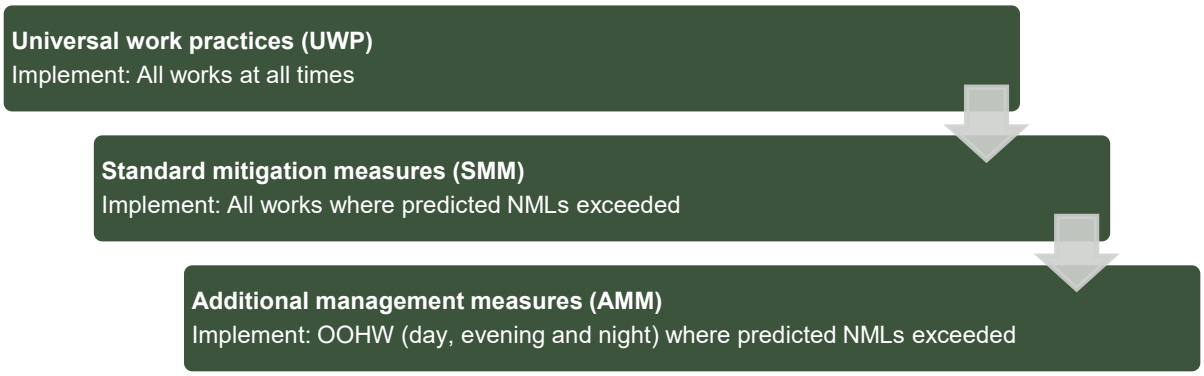

8.0 Mitigation and Management Measures

Noise from the Project may be apparent at the nearest receivers at certain times during the construction of the Project. The Project should apply all feasible and reasonable mitigation measures to minimise the impacts.

In accordance with CoA E74, works that exceed the noise management levels and/or vibration criteria must be managed in accordance with the CNVMP.

The Inland Rail NSW Construction Noise and Vibration Framework (CNVF) has been adopted as a guideline for this project and outlines a hierarchy of work practices and mitigation measures to minimise the impact of construction noise and vibration on the community. This hierarchy is shown in **Figure 7**.

Figure 7 Hierarchy of Work Practices and Mitigation Measures

The universal work practices (UWP) and standard mitigation measures (SMM) for the overall A2I project are outlined in the CNVMP. All mitigation and management measures outlined in the CNVMP will be adopted in accordance with CoA E74. Site specific mitigation measures are outlines below in **Section 8.1**. These measures have been incorporated into the noise modelling assessment to provide mitigated results. Additional Management Measures (AMM) are outlined in **Section 8.3**.

Docusign Envelope ID: 48BDB7AD-A0C7-8AA6-807F-DA2CDEDCBD18

8.1 Site Specific Mitigation Measures

Table 20 outlines the mitigation and management measures that will be adopted to minimise potential noise and vibration impacts associated with this CNVIS at surrounding sensitive receivers. These measures have been considered in noise modelling based on the total scenario sound power levels, refer **Appendix B**.

Table 20 Site Specific Mitigation Measures

Measure	Reference / Notes
Project Planning	
Use quieter and less vibration emitting construction methods where feasible and reasonable.	Best practice
Works will be completed during the approved daytime construction hours where possible, as outlined in **Section 2.2.** Some unavoidable OOHW will be required due to road and rail traffic management restrictions, as outlined in **Section 2.3**.	Best practice CoA E69 CoA E71
Where OOHW is required, an OOHW Permit will be prepared, as required by the OOHW Protocol or EPL. Further detail around the specific work tasks, duration and justification of OOHW must be identified in the OOHW permit.	Best practice CoA E71 CoA E72 CoA E73
Scheduling	
Highly noise intensive works that result in an exceedance of the applicable NML at the same receiver must only be undertaken: a) Between 08:00am – 06:00pm Monday to Friday; b) Between 08:00am – 01:00pm Saturday; and c) if continuously, then not exceeding three (3) hours, with a minimum cessation of work of not less than one hour. Refer **Section 2.2.1**.	Best practice CoA E70
Noise generating work in the vicinity of community, religious, educational institutions, noise and vibration-sensitive businesses and critical working areas (such as exam halls, theatres, laboratories and operating theatres) resulting in noise levels above the NMLs will not be timetabled during sensitive periods, unless other reasonable arrangements with the affected institutions can be made at no cost to the affected institution. Refer to Community Consultation in **Section 8.5**.	Best practice CoA E76
All work undertaken for the delivery of the project including those undertaken by third parties (such as utility relocations), must be coordinated to ensure respite periods are provided.	Best practice, CoA E83
Where feasible: • Limit noise generating work outside of standard construction hours as much as possible • Limit noise generating work on the weekends as much as possible • Construction works should be completed as soon as possible. Refer to Community Consultation in **Section 8.5**.	Best practice, CoA E78
Site Layout	
Compounds and worksites have been designed to promote one-way traffic and minimise the need for vehicle reversing.	Best practice
Construction activities must be planned to minimise vehicle movements around the Site.	
Work compounds, parking areas, and equipment and material stockpiles would be positioned away from noise-sensitive locations and take advantage of existing screening from local topography.	

Docusign Envelope ID: 48BDB7AD-A0C7-8AA6-807F-DA2CDEDCBD18

Measure	Reference / Notes
Equipment that is noisy would be started away from sensitive receivers	
Training	
Training will be provided to all personnel on noise and vibration requirements for the project. Inductions and toolbox talks to be used to inform personnel of the location and sensitivity of surrounding receivers.	Best practice
The induction protocols must include awareness of noise generating activities and mitigation measures and techniques that should be implemented.	
Training must be conducted for appropriate community behaviours when access/egress the Site.	
Plant and Equipment Source Mitigation	
All plant and equipment must be maintained in a proper and efficient condition, operated in a proper and efficient manner, and feature standard noise reduction measures where applicable.	Best practice CNVF
Plant and equipment must be selected that can be fitted with options to minimise noise such as covers, mufflers, shrouds and other noise suppression equipment. Low noise emission plant and equipment must be selected where available. These considerations have been included in noise modelling based on the equipment sound power levels, refer **Appendix B**.	
Tonal movement alarms (beepers) will be replaced with non-tonal alarms (squawkers) on all equipment in use (subject to occupational health and safety requirements).	
Stationary noise sources will be sited behind structures (or temporary screens) that act as barriers, or at the greatest distance from the noise-sensitive area (where practicable). Equipment will be oriented so that noise emissions are directed away from any sensitive areas.	
Noise generating equipment will be regularly checked and effectively maintained, including checking of hatches/enclosures regularly to ensure that seals are in good condition and doors close properly against seals.	
Noise monitoring spot checks of equipment will be completed to ensure individual items are operating as expected	
Dropping materials from a height will be avoided.	
Loading and unloading will be carried out away from noise sensitive areas, where practicable.	
Alternative construction methods have been considered and adopted for certain activities such as smaller hydraulic hammers pedestrian bridge removal and static rolling during site establishment works (refer **Section 6.0**).	Best practice
Construction Traffic	
Construction traffic routes to site will be limited to major roads where possible.	Best practice
Trucks will not queue outside residential properties.	
Truck drivers will be instructed to avoid compression braking as far as practicable.	
Delivery vehicles should be fitted with straps rather than chains for unloading, wherever possible.	
Truck movements will be kept to a minimum (ie trucks are fully loaded on each trip).	
Screening	
Install purpose-built screening or enclosures around long-term fixed plant that has the potential to impact nearby receivers	Best practice

Docusign Envelope ID: 48BDB7AD-A0C7-8AA6-807F-DA2CDEDCBD18

Measure	Reference / Notes
The layout of the site will take advantage of existing screening from local topography, where possible. Site huts, maintenance sheds and/or containers will be positioned between noisy equipment and the affected receivers.	CNVF
Implementation of temporary noise barriers for highly intensive noise activities, such as saw cutting or rock breaking.	
Community Consultation	
Regular communications on the activities and progress of the proposal shall be provided to the community (eg via newsletter, email and/or website).	Best practice CNVF
A telephone, email and web-based community information service shall be established to allow the community to obtain additional information on construction activities, provide feedback or make a complaint.	Best practice CNVF
Owners and occupiers of properties at risk of exceeding the screening criteria for cosmetic damage (and/or human comfort) must be notified before work that generates vibration commences in the vicinity of those properties. If the potential exceedance is to occur more than once or extend over a period of 24 hours, owners and occupiers are to be provided a schedule of potential exceedances on a monthly basis for the duration of the potential exceedances, unless otherwise agreed by the owner and occupier.	Best practice CoA E79
Personalised communication and respite offers will be provided to all receivers that are predicted to be highly noise affected (HNA).	Best practice
Notification will be provided to all impacted residences along construction traffic routes (including temporary diversions).	Best practice
Where complaints are received, work practices will be reviewed and feasible and reasonable practices applied to minimise any further impacts.	Best practice
Monitoring	
Noise and/or vibration monitoring will be conducted (as appropriate) when noise/vibration intensive works are being undertaken in close proximity to sensitive receivers.	Best practice CNVF CoA E80 CoA E81
Noise and vibration monitoring will be undertaken in accordance with the CNVMP and Monitoring Program.	
Advice from a heritage specialist must be sought on methods and locations for installing equipment used for vibration, movement and noise monitoring at heritage-listed structures.	
See **Section 8.7** or details of monitoring requirements.	
Vibration	
If vibration generating works are required within the minimum working distances and considered likely to exceed the criteria: • Different construction methods with lower source vibration levels will be investigated and implemented, where feasible (refer **Table 12**). • Attended vibration measurements will be undertaken at the start of the works to determine actual vibration levels of the item. Vibration intensive works will cease if the monitoring indicates vibration levels are likely to, or do, exceed the relevant cosmetic damage criteria. Work methods will be modified prior to recommencing the activity. Note: Where feasible, small hydraulic hammers and small vibratory rollers or static rolling will be prioritised to reduce vibration impacts to surrounding receivers.	Best practice CoA E80
Vibration intensive works required within the minimum working distance at the same receiver must only be undertaken: a) Between 08:00am – 06:00pm Monday to Friday; b) Between 08:00am – 01:00pm Saturday; and	Best practice CoA E70

Docusign Envelope ID: 48BDB7AD-A0C7-8AA6-807F-DA2CDEDCBD18

Measure	Reference / Notes
c) if continuously, then not exceeding three (3) hours, with a minimum cessation of work of not less than one hour. Refer to **Section 2.2.1**.	
Where works are required within the cosmetic damage minimum working distances, building condition surveys will be completed before and after the works to ensure no cosmetic damage has occurred. Heritage status of all structures that fall within the unsound heritage minimum working distance for the nominated vibration-intensive equipment should be confirmed prior to the commencement of works.	Best practice CoA C9
Property damage caused directly or indirectly (for example from vibration or from groundwater change) by the construction or operation must be rectified at no cost to the owner. Alternatively, compensation may be provided for the property damage as agreed with the property owner.	Best practice CoA E122

8.2 Respite

In accordance with CoA E70, except as permitted by an EPL, highly noise intensive works that result in an exceedance of the applicable NML at the same receiver must only be undertaken:

a) Between 08:00am – 06:00pm Monday to Friday;

b) Between 08:00am – 01:00pm Saturday; and

c) if continuously, then not exceeding three (3) hours, with a minimum cessation of work of not less than one hour.

For the purposes of this condition, 'continuously' includes any period during which there is less than one hour between ceasing and recommencing any of the work.

In accordance with CoA E72 and E83, the procedure outlined in the OOHW Protocol must be implemented to coordinate OOHW (including those approved by an EPL or undertaken by a third party), to ensure appropriate respite is provided. This coordination must include:

a) rescheduling work to provide respite to impacted noise sensitive land use(s) so that the respite is achieved; or

b) the provision of alternative respite or mitigation to impacted noise sensitive land use(s); and

c) the provision of documentary evidence to the AA in support of any decision made in relation to respite or mitigation.

The consideration of respite must also include all other CSSI, SSI and SSD projects which may cause cumulative and/or consecutive impacts at receivers affected by the delivery of the CSSI.

Highly noise intensive works (as defined in **Section 2.2.1**) are required in various work scenarios. As outlined above, highly noise intensive work that results in an exceedance of the applicable NML is restricted to the hours shown above and must have respite periods as defined above.

CoA E70 applies to the following work scenarios where highly noise intensive works are proposed and the NML is predicted to be exceeded: CoA E70 applies to the following work scenarios where highly noise intensive works are proposed and the NML is predicted to be exceeded:

Docusign Envelope ID: 48BDB7AD-A0C7-8AA6-807F-DA2CDEDCBD18

- W.003 – Geotechnical Investigation
- W.005 – Driver Platform Construction
- W.006 – Track Work – Peak
- W.008 – Track Tamping
- W.009 – Gantry Removal
- W.011 – Pedestrian Bridge Removal

In accordance with CoA E71, these activities require approval through the OOHW Protocol and/or EPL to occur outside the hours listed above from CoA E70.

Respite offers are also required as part of the additional mitigation measured outlined in **Section 8.3**.

8.3 Additional Mitigation and Management Measures for Out of Hours Work

Where the 'mitigated' construction noise levels remain above the NMLs, the Additional Mitigation Measures Matrix (AMMM) adapted from in the CNVF and CNVMP is to be implemented. The approach, guided by the AMMM, is primarily aimed at pro-active engagement with affected sensitive receptors rather than additional noise reducing mitigation. OOHW has been divided into three periods (Day, Evening and Night) as adapted from the CNVF around the approved project hours (CoA E69).

Additional mitigation measures described in the CNVMP are listed in **Table 21**. The additional mitigation measures to be adopted for airborne noise are identified in **Table 22**. The additional mitigation measures for construction vibration are identified in **Table 23**.

Table 21 Additional Mitigation Measures

Mitigation/Management Measure	Abbreviation
Communication (Category 1)[1]	CO1
Communication (Category 2)[2]	CO2
Respite Offer[3]	RO
Alternative Accommodation	AltA
Agreement with Owners	AO

Note 1: As outlined in the CNVF, Communication to provide information on the OOHW via methods such as letter box drop, email, newsletter, media advertisements and/ or website prior to the works commencing.

Note 2: As outlined in the CNVF, Communication should be personalised (e.g. door knock, meeting, telephone call). Contact with these residents should commence early to enable feedback to be considered by the proposal.

Note 3: As outlined in the CNVF, RO are not applicable to non-residential receivers. RO may comprise of pre-purchased movie tickets, dinner vouchers or similar. RO can also be provided by limiting high noise generating works and allowing at least a one-hour respite period between blocks of work. Where possible, the timing of this respite should be discussed with the impacted community.

Docusign Envelope ID: 48BDB7AD-A0C7-8AA6-807F-DA2CDEDCBD18

Table 22 Airborne Noise – Additional Mitigation Measures Matrix

Time Period		Exceedance of NML	Perception	Duration	Communication Category/ Management Measure
OOHW Daytime Period	Sunday 8am – 6pm (including public holidays)	<5	Noticeable	Any	CO1
		5-15	Clearly audible	Any	CO1
		16-25	Moderately intrusive	Any	CO1, CO2
		>25	Highly intrusive	Any	CO1, CO2
OOHW Evening Period	Monday – Sunday 6pm – 10pm (including public holidays)	<5	Noticeable	Any	CO1
		5-15	Clearly audible	Any	CO1
		16-25	Moderately intrusive	Any	CO1, CO2
		>25	Highly intrusive	Any	CO1, CO2
				>2 consecutive rest periods[1]	CO1, CO2, RO
OOHW Night Period	Monday – Saturday 10pm – 7am Sunday 10pm – 8am (including public holidays)	<5	Noticeable	Any	CO1
		5-15	Clearly audible	Any	CO1
		16-25	Moderately intrusive	Any	CO1, CO2
				>2 consecutive sleep periods[1]	CO1, CO2, RO,AO
		>25	Highly intrusive	Any	CO1, CO2, RO
				>2 consecutive sleep periods[1]	CO1, CO2, RO, AO, AltA

Note 1: Where the duration exceeds 2 consecutive rest/sleep periods, the corresponding additional mitigation measures will be provided for all periods where construction exceedances are expected to occur.

Table 23 Vibration – Additional Mitigation Measures Matrix

Time Period		Duration	Exceedance of 'preferred' value	Exceedance of 'maximum' value
OOHW Daytime Period	Sunday 8am – 6pm (including public holidays)	Any	CO1, CO2	CO1, CO2, RO
OOHW Evening Period	Monday – Sunday 6pm – 10pm (including public holidays)	Any	CO1, CO2	CO1, CO2, RO
OOHW Night Period	Monday – Saturday 10pm – 7am Sunday 10pm – 8am (including public holidays)	Any	CO1, CO2, RO	CO1, CO2, RO, AltA

Docusign Envelope ID: 48BDB7AD-A0C7-8AA6-807F-DA2CDEDCBD18

8.3.1 Receivers Eligible for Additional Mitigation Measures - Noise

The receivers eligible for additional mitigation and management measures due to construction noise from the project work are presented in **Appendix C** and **Appendix D**. Where work occurs for greater than two consecutive evening or nights, receivers may be eligible for respite offers (RO), agreements with owners (AO) or alternative accommodation (AltA) depending on the exceedance level and works period as detailed in **Table 22**.

As outlined in **Section 5.2**, 'highly intrusive' impacts at nearest residential receivers and some other sensitive receivers are predicted for most work scenarios due to the proximity to the work. The addresses of the 'highly intrusive' impacted receivers are provided in **Appendix D**.

All scenarios that are scheduled for OOHW are predicted to create highly intrusive noise levels at residential receivers for the night-time period. Should these works occur for more than two consecutive sleep or rest periods in a row, additional mitigation measures must be offered as outlined in **Table 22**.

Where possible, work would be scheduled to avoid impacting the same receivers for more than two consecutive sleep periods. Receivers that would be impacted for more than two consecutive sleep periods must be identified in the OOHW permit.

8.3.2 Receivers Eligible for Additional Mitigation Measures - Vibration

As defined in **Section 2.2.1** and **Section 8.2** activities involving high noise generating equipment, such as rock hammering or vibratory rolling, are limited to specific daytime construction hours only. Respite periods of 1 hour after every 3 hours of high noise/vibration generating work are also required.

Construction vibration mitigation and management measures are discussed in **Section 8.0**. Any proposed works outside of the approved daytime hours will need to be assessed as part of the OOHW permit preparation discussed in **Section 2.4**. Any additional mitigation (from **Table 23**) for vibration activities must be identified in the OOHW permit.

8.4 Community Notification

As detailed in the standard management measures outlined in the CNVF:

- A telephone, email and web-based community information service will be established to allow the community to obtain additional information on construction activities, provide feedback or make a complaint.
- Regular communications on the activities and progress of the proposal shall be provided to the community (e.g. via newsletter, email and/or website).

8.5 Consultation with Affected Receivers

In accordance with CoA E78, the CNVIS must include specific mitigation measures identified through consultation with affected sensitive land user(s) and the mitigation measures must be implemented for the duration of the Work. Details of this consultation are provided below.

8.5.1 Consultation Approach

This section discusses the consultation approach that has been undertaken for the purposes of the work subject to this CNVIS. It is noted that consultation with affected sensitive land users on what specific mitigation measures they may require is considered to be an ongoing and live process and as such, measures that are personal to individual affected sensitive

Docusign Envelope ID: 48BDB7AD-A0C7-8AA6-807F-DA2CDEDCBD18

land user(s) will not be regularly documented in this CNVIS. Consultation records will be made available to the AA upon request.

The purpose of this consultation is to identify receivers who have specific circumstances that need further consideration during construction – for example, households who have children undertaking exams (HSC or similar), households who have vulnerable persons with disabilities or medical conditions, shift workers, etc.

The consultation approach utilised by Martinus Rail is in accordance with the Community Communications Strategy (CCS). The approach involved directly contacting the affected sensitive land user identified by this CNVIS through one or more of the following methods:

- Surveys distributed by email and paper notifications
- Door-knocks with a 'Sorry we missed you' card for those who were not at home
- Notifications
- Phone calls
- Emails
- Community briefings / group meetings.

Affected sensitive land users contacted by Martinus Rail have been made aware of the anticipated duration and nature of construction works that may affect them, as well as mitigation measures that will be implemented in accordance with the CEMP and CNVMP. Contact information for Martinus Rail's Community Team have been provided to assist with ongoing consultation during construction.

Depending on individual needs and circumstances, specific mitigation measures offered by Martinus Rail could include but are not limited to:

- Offers of individually agreed respite to highly noise affected sensitive land users (standard construction hours)
- Consultation on timetabling of highly noise intensive works to avoid sensitive periods
- Offers of attended noise monitoring at the premises to confirm actual levels of impact
- Offers of temporary alternative accommodation or work space
- Individual briefings.

Specific mitigation measures identified in consultation with individual affected sensitive land users will be implemented during works subject to this CNVIS. Further mitigation measures may be identified by the affected community as construction progresses and these will be assessed where reasonable and feasible and on a case by-case basis.

8.5.2 Consultation for this CNVIS

The project website includes the following key information:

- Latest approvals
- All management plans, including the CNVMP and the Construction Environmental Management Plan (CEMP), which provide information on the relevant environmental management measures
- Notifications, including three-month lookaheads, monthly updates and specific OOHW notifications

Docusign Envelope ID: 48BDB7AD-A0C7-8AA6-807F-DA2CDEDCBD18

- Contact mechanisms, including requests for feedback and/or complaints on individual circumstances.

As part of the project's program of regular notifications, the following notifications have included information on the OOHW requirements subject to this CNVIS:

- Project-wide monthly notifications distributed to over 25,000 properties
- Work specific notifications
- Three-month lookahead notifications distributed to over 25,000 properties
- Regular email with details of upcoming work or changes.

All notifications include the following:

- Link to project website
- 24/7 phone number and email address for enquiries, complaints or comments
- Requests for the community to provide feedback on their individual needs and circumstances.

Prior to commencement of works subject to this CNVIS, targeted consultation occurred with a total of approximately 7,127 residential properties across the entire project alignment, approximately 420 of which were in the Junee precinct. These properties received targeted letterbox drops, emails and newspaper adverts from the Community Team and feedback was sought across (3) three weeks, from 7 August to 28 August 2024.

The team requested feedback from the affected community on their individual needs during this targeted consultation.

8.5.3 Consultation Outcomes

Feedback received during this consultation was primarily related to the existing operational train line and the disturbance the trains cause.

In Junee, no additional management measures relating to construction noise were identified during this consultation; however, the following general sentiments were noted from respondents:

- Limit noise generating work outside of standard construction hours as much as possible
- Limit noise generating work on the weekends as much as possible
- Construction works should be completed as soon as possible.
- Minimise works between the period of 10pm – 7am. Currently, this period is outside of the standard work hours defined in the CoA. Any out of hours work will need to be assessed in accordance with **Section 2.4**.

The CNVIS documents the need to limit noise generating work as much as possible and this will be achieved through the implementation of existing mitigation measures listed in this CNVIS.

Nevertheless, regular consultation with the community will continue throughout construction in accordance with the Community Communications Strategy and the Community Action Plan prepared for the relevant activities. A list of key stakeholders relevant to this CNVIS are included in, **Table 24** below.

Docusign Envelope ID: 48BDB7AD-A0C7-8AA6-807F-DA2CDEDCBD18

Table 24 Key Stakeholders for this CNVIS

Precinct Area	Receiver Type	Level of Engagement	Distance from Work Site (m)
Junee Precinct			
Junee Shire Council	Council	Consult	n/a
Junee District Hospital	Health	Consult	n/a
Junee Station, Junee Yard and Kemp Street Bridge			
Junee Public School	Educational	Consult	130
Good Start Early Learning Junee	Educational	Consult	50
The Crossing Motel, Edgar Street, Lorne Street, Olympic Highway and Anzac Avenue	Residential	Consult	Various
Edgar, George, Ducker, Kemp and Hill Streets	Residential	Consult	Various
Railway Lane, Railway Parade, Thomas, Kemp, Wardle, Hill, Ducker, Signior Streets and Pretoria Avenue	Residential	Consult	Various
Red Cow Hotel, The Junee Hotel	Other (Hotel)	Consult	Various
Chris Blanchard & Mrs Anne Louise	Owner, Locomotive Hotel	Consult	30

8.6 Occupational Noise Exposure

In accordance with CoA E77, worksites will be managed to ensure that noise generated by construction will not exceed the National Standard for exposure to noise in the occupational environment of an eight-hour equivalent continuous A-weighted sound pressure level of $L_{Aeq,8h}$ of 85 dBA for any employee working at a location near the project.

It is not anticipated that an exceedance will occur at any point during the project, however occupational exposure to noise will primarily be managed under the Work Health and Safety Management Plan.

Docusign Envelope ID: 48BDB7AD-A0C7-8AA6-807F-DA2CDEDCBD18

8.7 Monitoring

Noise and vibration monitoring will be undertaken in accordance with the CNVMP (including monitoring program) and the CNVF.

CoA E81 requires that advice from an independent heritage specialist must be sought on methods and locations for installing equipment used for vibration, movement and noise monitoring at heritage-listed structures prior to the installation of the equipment.

Construction Noise Monitoring

Construction noise monitoring will be carried out at the commencement of activities to confirm that actual noise levels are consistent with the predictions presented in this CNVIS, and that the management measures that have been implemented are effective or as per the CNVMP.

Monitoring locations will be focused to the most impacted receivers identified in **Appendix C**. Indicative locations are identified in **Table 25**, however, these will be subject to provision of safe access and the specific location of work being undertaken at the time of monitoring. Noise monitoring will, where practicable, be in a position with unobstructed views of general site activities, whilst shielded as much as possible from non-construction site noise (e.g. road traffic, rail noise and other surrounding noise). The preferred measurement height is 1.2-1.5m above the ground. In accordance with *Australian Standard AS1055:2018*, outdoor noise monitoring is to be undertaken at least 3.5m from any reflecting structure other than the ground.

Noise monitoring will be carried out on or near the property boundary at the locations representative of the nominated receivers in **Table 25** (i.e. in publicly accessible areas near the nominated receivers, if it is safe to do so). Noise monitoring results will be assessed against the noise management levels (NMLs) and predicted exceedance category identified in **Appendix C**.

The results will be documented with discussion about the details of work underway at the time and mitigation in place. Noise monitoring results will be recorded on the MR Noise Monitoring Form in Procore. Noise monitoring data will be made available to the AA and ER for information, upon request.

Construction Vibration Monitoring

Attended or unattended vibration monitoring will be undertaken as required. Monitoring locations may vary as work progresses and will be determined on a case-by-case basis or in response to complaints. The focus of monitoring will be at risk buildings, structures and sensitive receivers as identified in **Section 6.0**. If other vibration intensive activities are required, an assessment of their potential impact is required as per the CNVMP.

Indicative locations are identified in **Table 25**, however, these will be subject to provision of safe access and the specific location of work being undertaken at the time of monitoring. Vibration monitoring data will be made available to the AA and ER for information, upon request.

Docusign Envelope ID: 48BDB7AD-A0C7-8AA6-807F-DA2CDEDCBD18

Table 25 Indicative Monitoring Locations

Location	Type	Monitoring	Timing
Noise Monitoring			
Junee Yard • 2 Crawley St, Junee • 140 Main St, Junee **Junee Station** • 31 Seignior St, Junee • 137 Lorne St, Junee **Kemp Street Bridge** • 5 Hill St, Junee • 1 Seignior St, Junee	Activities based noise monitoring	• Confirming that actual noise levels are consistent with predicted noise impacts and that the effectiveness of actions and mitigation measures implemented are satisfactory, • In response to a noise related complaint(s) (determined on a case-by-case basis) • Following implementation of mitigation measures or noise attenuation because of exceedance of predicted noise levels	At the commencement of the activities being undertaken
	Out of Hours Work	Attended monitoring as required by the Out of Hours Work (OOHW) plan to validate noise levels are consistent with predicted noise impacts and that the effectiveness of actions and mitigation measures implemented are satisfactory	At the commencement of the range of OOHW activities being undertaken.
	Plant / Equipment Checks	Spot checks would be carried out as required on a case-by-case basis, such as • In response to a specific noise related complaint and • During noise verification monitoring when it is possible to isolate the noise from one piece of plant or equipment.	case-by-case basis
Vibration Monitoring			
• Junee Railway Station • 2 Crawley St, Junee	Activities based vibration monitoring	• Confirming that vibration levels are below criteria and that the effectiveness of actions and mitigation measures implemented are satisfactory • In response to a vibration related complaint(s) (determined on a case-by-case basis)	Throughout vibration generating activities being undertaken within minimum working distances to nearby receivers.

Docusign Envelope ID: 48BDB7AD-A0C7-8AA6-807F-DA2CDEDCBD18

9.0 Cumulative Impacts

Cumulative construction noise impacts can occur where multiple work activities are being completed near to a particular receiver at the same time. There is potential for cumulative construction impacts from multiple construction activities being completed in different areas of the project (ie Junee Station, Junee Yard and Kemp Street Bridge enhancement sites).

Since the construction scenarios required for various stages of the project would generally require similar items of equipment, concurrent construction work being completed near to a particular area could theoretically increase the worst-case noise levels in this report by around 3 dB (ie a logarithmic adding of two sources of noise at the same level).

The likelihood of worst-case noise levels being generated by two different work activities at the same time is, however, considered low and rather than increase construction noise levels, the impact of concurrent work would generally be a limited to a potential increase in the duration, and annoyance, of noise impacts on the affected receivers.

In practice, construction noise levels in any one location would vary and would be frequently much lower than the worst-case scenario assessed due to construction staging moving work around within the study area and, in many cases, only a few items of equipment being used at any one time.

Martinus Rail will take feasible and reasonable steps to consult and coordinate with other construction projects when they become aware of them and if they have the potential to impact the same receivers concurrently, to minimise cumulative impacts of noise and vibration and maximise respite for affected sensitive receivers (in accordance with CoA E72 and E83).

12 August 2025

Docusign Envelope ID: 48BDB7AD-A0C7-8AA6-807F-DA2CDEDCBD18

1. Sound Level or Noise Level

The terms 'sound' and 'noise' are almost interchangeable, except that 'noise' often refers to unwanted sound.

Sound (or noise) consists of minute fluctuations in atmospheric pressure. The human ear responds to changes in sound pressure over a very wide range with the loudest sound pressure to which the human ear can respond being ten million times greater than the softest. The decibel (abbreviated as dB) scale reduces this ratio to a more manageable size by the use of logarithms.

The symbols SPL, L or LP are commonly used to represent Sound Pressure Level. The symbol LA represents A-weighted Sound Pressure Level. The standard reference unit for Sound Pressure Levels expressed in decibels is 2×10^{-5} Pa.

2. 'A' Weighted Sound Pressure Level

The overall level of a sound is usually expressed in terms of dBA, which is measured using a sound level meter with an 'A-weighting' filter. This is an electronic filter having a frequency response corresponding approximately to that of human hearing.

People's hearing is most sensitive to sounds at mid frequencies (500 Hz to 4,000 Hz), and less sensitive at lower and higher frequencies. Different sources having the same dBA level generally sound about equally loud.

A change of 1 dB or 2 dB in the level of a sound is difficult for most people to detect, whilst a 3 dB to 5 dB change corresponds to a small but noticeable change in loudness. A 10 dB change corresponds to an approximate doubling or halving in loudness. The table below lists examples of typical noise levels.

Sound Pressure Level (dBA)	Typical Source	Subjective Evaluation
130	Threshold of pain	Intolerable
120	Heavy rock concert	Extremely noisy
110	Grinding on steel	
100	Loud car horn at 3 m	Very noisy
90	Construction site with pneumatic hammering	
80	Kerbside of busy street	Loud
70	Loud radio or television	
60	Department store	Moderate to quiet
50	General Office	
40	Inside private office	Quiet to very quiet
30	Inside bedroom	
20	Recording studio	Almost silent

Other weightings (eg B, C and D) are less commonly used than A-weighting. Sound Levels measured without any weighting are referred to as 'linear', and the units are expressed as dB(lin) or dB.

3. Sound Power Level

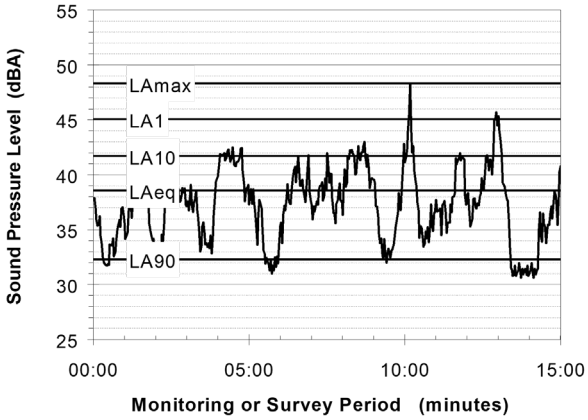

The Sound Power of a source is the rate at which it emits acoustic energy. As with Sound Pressure Levels, Sound Power Levels are expressed in decibel units (dB or dBA), but may be identified by the symbols SWL or LW, or by the reference unit 10^{-12} W.

The relationship between Sound Power and Sound Pressure is similar to the effect of an electric radiator, which is characterised by a power rating but has an effect on the surrounding environment that can be measured in terms of a different parameter, temperature.

4. Statistical Noise Levels

Sounds that vary in level over time, such as road traffic noise and most community noise, are commonly described in terms of the statistical exceedance levels LAN, where LAN is the A-weighted sound pressure level exceeded for N% of a given measurement period. For example, the LA1 is the noise level exceeded for 1% of the time, LA10 the noise exceeded for 10% of the time, and so on.

The following figure presents a hypothetical 15 minute noise survey, illustrating various common statistical indices of interest.

Of particular relevance, are:

LA1 The noise level exceeded for 1% of the 15 minute interval.

LA10 The noise level exceeded for 10% of the 15 minute interval. This is commonly referred to as the average maximum noise level.

LA90 The noise level exceeded for 90% of the sample period. This noise level is described as the average minimum background sound level (in the absence of the source under consideration), or simply the background level.

LAeq The A-weighted equivalent noise level (basically, the average noise level). It is defined as the steady sound level that contains the same amount of acoustical energy as the corresponding time-varying sound.

LAmax The A-weighted maximum sound pressure level of an event measured with a sound level meter.

5. Frequency Analysis

Frequency analysis is the process used to examine the tones (or frequency components) which make up the overall noise or vibration signal.

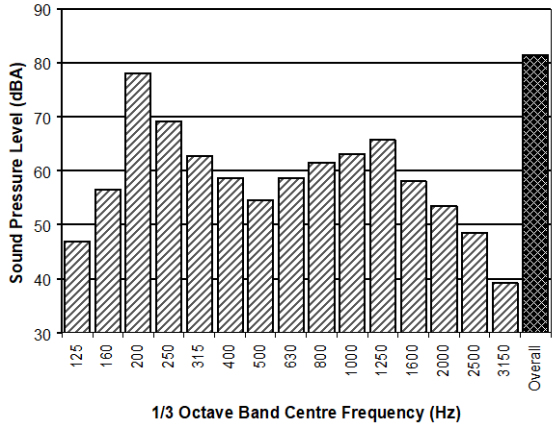

The units for frequency are Hertz (Hz), which represent the number of cycles per second.

Frequency analysis can be in:

- Octave bands (where the centre frequency and width of each band is double the previous band)
- 1/3 octave bands (three bands in each octave band)
- Narrow band (where the spectrum is divided into 400 or more bands of equal width)

Docusign Envelope ID: 48BDB7AD-A0C7-8AA6-807F-DA2CDEDCBD18

The following figure shows a 1/3 octave band frequency analysis where the noise is dominated by the 200 Hz band. Note that the indicated level of each individual band is less than the overall level, which is the logarithmic sum of the bands.

6. Annoying Noise (Special Audible Characteristics)

A louder noise will generally be more annoying to nearby receivers than a quieter one. However, noise is often also found to be more annoying and result in larger impacts where the following characteristics are apparent:

- **Tonality** - tonal noise contains one or more prominent tones (ie differences in distinct frequency components between adjoining octave or 1/3 octave bands), and is normally regarded as more annoying than 'broad band' noise.
- **Impulsiveness** - an impulsive noise is characterised by one or more short sharp peaks in the time domain, such as occurs during hammering.
- **Intermittency** - intermittent noise varies in level with the change in level being clearly audible. An example would include mechanical plant cycling on and off.
- **Low Frequency Noise** - low frequency noise contains significant energy in the lower frequency bands, which are typically taken to be in the 10 to 160 Hz region.

7. Vibration

Vibration may be defined as cyclic or transient motion. This motion can be measured in terms of its displacement, velocity or acceleration. Most assessments of human response to vibration or the risk of damage to buildings use measurements of vibration velocity. These may be expressed in terms of 'peak' velocity or 'rms' velocity.

The former is the maximum instantaneous velocity, without any averaging, and is sometimes referred to as 'peak particle velocity', or PPV. The latter incorporates 'root mean squared' averaging over some defined time period.

Vibration measurements may be carried out in a single axis or alternatively as triaxial measurements (ie vertical, longitudinal and transverse).

The common units for velocity are millimetres per second (mm/s). As with noise, decibel units can also be used, in which case the reference level should always be stated. A vibration level V, expressed in mm/s can be converted to decibels by the formula 20 log (V/Vo), where Vo is the reference level (10^{-9} m/s). Care is required in this regard, as other reference levels may be used.

8. Human Perception of Vibration

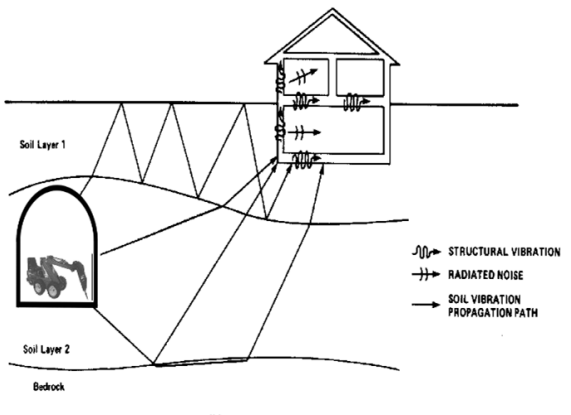

People are able to 'feel' vibration at levels lower than those required to cause even superficial damage to the most susceptible classes of building (even though they may not be disturbed by the motion). An individual's perception of motion or response to vibration depends very strongly on previous experience and expectations, and on other connotations associated with the perceived source of the vibration. For example, the vibration that a person responds to as 'normal' in a car, bus or train is considerably higher than what is perceived as 'normal' in a shop, office or dwelling.

9. Ground-borne Noise, Structure-borne Noise and Regenerated Noise

Noise that propagates through a structure as vibration and is radiated by vibrating wall and floor surfaces is termed 'structure-borne noise', 'ground-borne noise' or 'regenerated noise'. This noise originates as vibration and propagates between the source and receiver through the ground and/or building structural elements, rather than through the air.

Typical sources of ground-borne or structure-borne noise include tunnelling works, underground railways, excavation plant (eg rockbreakers), and building services plant (eg fans, compressors and generators).

The following figure presents an example of the various paths by which vibration and ground-borne noise may be transmitted between a source and receiver for construction activities occurring within a tunnel.

The term 'regenerated noise' is also used in other instances where energy is converted to noise away from the primary source. One example would be a fan blowing air through a discharge grill. The fan is the energy source and primary noise source. Additional noise may be created by the aerodynamic effect of the discharge grill in the airstream. This secondary noise is referred to as regenerated noise.

W.008	Work Scenario 8A – Track Tamping

1 INTRODUCTION

1.1 Purpose of this Addendum

This Construction Noise and Vibration Impact Statement Addendum (CNVIS Addendum) has been prepared to identify and assess the additional work area and plant/equipment, required to support and enable the wider scope of activities associated with the Junee Yard clearances and station enhancement site (Junee Yard) works. This CNVIS Addendum will form part of the endorsed Junee Yard CNVIS (Doc No: 6-0052-210-EEC-J4-AS-0001_0) (endorsed CNVIS).

This CNVIS Addendum should be reviewed in conjunction with the endorsed CNVIS, including adopted rating background levels (RBLs), noise management levels (NMLs) and assessment criteria in accordance with the Infrastructure Approval (SSI-10055).

The work areas assessed in this CNVIS Addendum are presented in Figure 1 below.

FIGURE 1: ADDITIONAL WORK AREA FOR JUNEE YARD (W.008A).

2 NOISE ASSESSMENT

The potential construction noise levels from the proposed works have been predicted using SLR Predict, the A2I project-specific noise and vibration tool. This CNVIS Addendum assesses the work scenarios identified in Table 2.

TABLE 2: WORK SCENARIO DESCRIPTION

ID	SCENARIO	DESCRIPTION	TOTAL LW
Junee Yard			
W.008A	Track Tamping	▪ Ballast Tamping	▪ 120

2.1 Junee Yard – Track Tamping (W.008A)

2.1.1 Scope

The additional work area and revised Plant list will support the installation of the Junee Yard 110 A and 110B Crossover (Figure 1) and forms part of the wider scope associated at Junee Yard.

The endorsed Junee Yard CNVIS has assessed track tamping under work scenario W.008.

The revised work area will be assessed, along with the additional plant/equipment, using SLR Predict, the A2I noise and vibration management tool, with the following noted:

Plant and equipment

- 1 x Ballast Tamper
- 1 x Ballast Regulator
- 4 x Hi-rail Hydrema
- 2 x Hi-rail Truck/Trolley
- 2 x Hi-rail Excavator (20T)
- 2 x Compressor
- 2 x Generator
- 1 x Saw - rail
- 1 x Grinder
- 2 x Front End Loader
- 4 x Lighting Towers
- 1 x Watercart

Construction hours

- Standard approved hours:
  - 7am to 6pm Monday to Friday, inclusive
  - 7am to 6pm Saturday
- Daytime OOH:
  - 8am to 6pm Sunday and Public Holidays
- Evening OOH:
  - 6pm to 10pm Monday to Sunday (including Public Holidays)
- Night OOH:
  - 10pm to 7am Monday to Saturday
  - 10pm to 8am Sunday (including Public Holidays)

3.1.1 Assessment

The additional work area and revised Plant list has been assessed utilising SLR Predict. The plant and equipment list (as noted above) has been considered as a worst-case scenario within a 15-minute assessment period.

The operating time (utilisation %) of each plant and equipment is representative to site working conditions.

4.1.1 Results

The SLR Predict results are presented in Appendix A, for approved daytime hours.

Table 4 provides a summary of the exceedances identified through various assessments. It compares the following:

- W.008 exceedances identified in the endorsed CNVIS
- W.008A exceedances identified in the SLR Predict results for the work area shown in Table 4.

TABLE 3: EXCEEDANCE COMPARISON FOR W.008A - DAY

ASSESSMENT RESULTS (APPROVED DAYTIME)	NUMBER OF RESIDENTIAL RECEIVERS WITH NML EXCEEDANCE	
	CNVIS – W.008	SLR Predict – W.008A (additional work scenario)
Total Lw (dBA)	119	120
Clearly Audible (1-10 dB)	407	199
Moderately Intrusive (11-20 dB)	81	44
Highly Intrusive (>20 dB)	20	2
Above Highly Noise Affected (HNA)	7	1

Table 4 shows a slight increase in the Total Lw (dBA) for approved standard hours but overall a decrease in the number of receivers impacted in all noise affected assessment criterion, including Highly Noise Affected (HNA), when compared with the endorsed CNVIS. This is likely due to the reduced area assessed for this proposed CIZ extension.

5.1.1 Results

The SLR Predict results are presented in Appendix A, for night out of hours, as the most affected period.

Table 4 provides a summary of the exceedances identified through various assessments. It compares the following:

- W.008 exceedances identified in the endorsed CNVIS
- W.008A exceedances identified in the SLR Predict results for the work area shown in Table 4.

TABLE 4: EXCEEDANCE COMPARISON FOR W.008A – OOH NIGHT

ASSESSMENT RESULTS (OOH NIGHT)	NUMBER OF RESIDENTIAL RECEIVERS WITH NML EXCEEDANCE	
	CNVIS – W.008	SLR Predict – W.008A (additional work scenario)
Total Lw (dBA)	119	120
Noticeable (1-5 dB)	447	669
Clearly Audible (6-15 dB)	846	774
Moderately Intrusive (16-25 dB)	262	126
Highly Intrusive (>25 dB)	69	26
Above sleep disturbance	825	545
Above sleep awake	126	58

Table 4 shows a slight increase in the Total Lw (dBA) and an increase in receivers experiencing noticeable (1-5 dB) intensity of impacts when compared with the endorsed CNVIS. There is a decrease in all other assessment criterion from clearly audible (6-15 dB), moderately intrusive (16-25 dB), and highly intrusive (>25 dB) receiver impacts. There is also a decrease in receivers experiencing sleep disturbance impacts and in receivers predicted to exceed the sleep awakening criterion in comparison to the endorsed CNVIS.

3 VIBRATION ASSESSMENT

As noted above in Section 2.1, a Ballast Tamper, Ballast Regulator, Rail saw and Grinder will be utilised as part of the additional work area at Junee Yard.

The potential vibration impacts associated with W.008A have been assessed utilising SLR Predict. A comparison of the Transport CNVG-PTI minimum working distances for cosmetic damage and human comfort (TfNSW CNVG-PTI) against the SLR Predict results, has been summarised and presented in Table 5: Vibration exceedances criteria for W.008A (Ballast Tamper)Table 5 below.

3.1 Track tamping (W.008A)

For W.008A the following vibration-intensive plant/equipment will be utilised (as per endorsed CNVIS):

- 1x Ballast Tamper
- Ballast Regulator
- Rail saw
- Grinder

A comparison of the Transport CNVG-PTI minimum working distances for cosmetic damage and human comfort (TfNSW CNVG-PTI) against the SLR Predict results, has been summarised and presented in Table 5 below.

TABLE 5: VIBRATION EXCEEDANCES CRITERIA FOR W.008A (BALLAST TAMPER)

VIBRATION CRITERIA	VIBRATION CRITERIA	NUMBER OF RECEIVERS WITH VIBRATION CRITERIA EXCEEDANCE
	Ballast Tamping TfNSW's CNVG PTI	SLR Predict – W.008A
Cosmetic Damage (Residential and Light Commercial)	5m	4 properties
Cosmetic Damage for Unsound Heritage	10m	0
Cosmetic Damage (Industrial and Heavy Commercial)	3m	-
Human Comfort	30m	10 properties

Note 1: Some addresses have both residential and non-residential uses and therefore have been accounted for in each vibration criteria category triggered.

Table 5 shows the number of properties with potential to exceed the vibration criteria for cosmetic damage and human comfort. The structures identified in the CNVIS Addendum for potential exceedance for human comfort and cosmetic damage have not been previously identified in the endorsed CNVIS.

Condition surveys will be undertaken for the additional structures prior to commencement of works

SLR results for vibration are presented in Appendix B.

The Junee North Box, while relevant to the evolving railway history of Junee, is not of unique or rare construction with other examples present with the Southern Junee Box present further south retained within the Junee Railway Station SHR curtilage and at other railway station groups in NSW. Further, the structure is not aesthetic or associated with a historic event or individual. The Junee North Box has no local, state or Commonwealth heritage significance. (Ozark Memo Aug 2026). A condition report has been undertaken on this building.

4 CONCLUSION

4.1 Mitigation and management measures

As this is an addendum to the endorsed CNVIS for Junee Yard, the same mitigation and management measures apply as noted in Section 8 of the endorsed CNVIS.

4.2 Additional mitigation measures

As noted in Figure 2 to Figure 4 below and under Appendices A & B, the SLR Predict vibration results include a section on all applicable additional mitigation measures. These additional mitigation measures will be implemented where appropriate.

Airborne Noise - Additional Mitigation Measures Matrix				
Time Period	Exceedance of NML	Perception	Duration	Communication Category/Management Measure
OOHW Daytime PeriodSunday 7am - 6pm(including public holidays)	<5	Noticeable	Any	CO1
	5 - 15	Clearly audible	Any	CO1
	16 - 25	Moderately intrusive	Any	CO1, CO2
	>25	Highly intrusive	Any	CO1, CO2

Additional Mitigation Measures	
Measure	**Abbreviation**
Communication (Category 1)[1]	CO1
Communication (Category 2)[2]	CO2
Respite Offer[3]	RO
Alternative Accommodation	AltA
Agreement with Owners	AO

Note 1: CO1: Communication to provide information on the OOHW via methods such as letter box drop, email, newsletter, media advertisements and/ or website prior to the works commencing.

Note 2: CO2: Communication should be personalised (e.g. door knock, meeting, telephone call). Contact with these residents should commence early to enable feedback to be considered by the proposal.

Note 3: RO are not applicable to non-residential receivers. RO may comprise of pre-purchased movie tickets, dinner vouchers or similar. RO can also be provided by limiting high noise generating works and allowing at least a one-hour respite period between blocks of work. Where possible, the timing of this respite should be discussed with the impacted community.

APPENDICES

APPENDIX A

SLR Predict (W.008A) – Noise

Construction Noise and Vibration Impact Statement (CNVIS)

This report presents the outcomes of detailed noise/vibration modelling relating to specific construction activities proposed on site in accordance with the methodology outlined in the *Construction Noise and Vibration Management Plan* (CNVMP) and overarching *Construction Noise and Vibration Impact Statement* (CNVIS).
Prior to detailed noise/vibration modelling being undertaken, work activities are reviewed and considered in relation to industry best practice, consistent with the requirements of the CNVMP. Consideration is first given to eliminating the noise/vibration emissions so far as reasonably practicable. Where elimination is not practicable, efforts are been made to reduce the risk as far as practical by implementing noise and vibration management measures as outlined in the overarching CNVIS and CNVMP.
Examples of these measures include selecting the quietest equipment and processes to complete the works, considering staging and periods of respite to minimise prolonged periods of noise and vibration exposure, and maximising distances between construction activities and sensitive receivers.

Consultation with Affected Receivers
In accordance with CoA E78, the CNVIS must include specific mitigation measures identified through consultation with affected sensitive land user(s) and the mitigation measures must be implemented for the duration of the Work. Details of this consultation are provided in the overarching CNVIS for each enhancement site.

Predicted Noise Levels
The assessment presents the highest predicted level at each receiver building, considering predictions at each floor and façade from all potential work areas. The assessment is generally considered conservative as the calculations assume several items of construction equipment are in use at the same time within each work area. The assessment uses ‘realistic worst-case’ scenarios to determine the impacts from the noisiest 15-minute period that is likely to occur for each work scenario.

Assessment Details

Assessment Name	110 Crossover Junee
Assessment Number	531
Stage	A2I Construction
Permit Number	
Start Date	2026-09-01
End Date	2026-10-30
Assessment Period	Day - standard

Equipment Details

Plant/Equipment	Equipment Sound Power Level (Unadjusted), dBA	Number of Units	Temporary Noise Barrier
1: 110 Crossover - Noise (Height: Ground)	Total: 120		
Ballast Tamper 75% operation	115	1	No
Ballast Regulator 75% operation	114	1	No
Hi-Rail Hydrema 25% operation	107	4	No
Compressor 50% operation	109	2	No
Generator - attenuated 100% operation	92	2	No
Saw - rail 25% operation	118	1	No
Grinder 30% operation	105	1	No
Lighting Tower 100% operation	80	4	No
Hi-Rail Truck/Trolley 25% operation	103	2	No
Water Cart 75% operation	105	1	No

Note 1: Equipment classed as 'annoying' in the *Interim Construction Noise Guideline (DECC, 2009)* include a 5 dB correction.
Note 2: Equipment sound power levels consider the mitigation measures outlined in the overarching CNVIS to provide mitigated results.

Equipment Details

Plant/Equipment	Equipment Sound Power Level (Unadjusted), dBA	Number of Units	Temporary Noise Barrier
Front End Loader 50% operation	113	2	No
Hi-Rail Excavator (20T) 50% operation	105	2	No
2: 110 Crossover - Vibration (Height: Ground)	Total: 118		
Ballast Tamper 75% operation	115	1	No
Ballast Regulator 75% operation	114	1	No
Saw - rail 25% operation	118	1	No
Grinder 30% operation	105	1	No

Note 1: Equipment classed as 'annoying' in the *Interim Construction Noise Guideline (DECC, 2009)* include a 5 dB correction.
Note 2: Equipment sound power levels consider the mitigation measures outlined in the overarching CNVIS to provide mitigated results.

Recommended Mitigation Measures

This assessment has been conducted with regard to the relevant CNVIS and CNVMP. To manage noise and vibration impacts, project specific mitigation measures may be considered such as reviewing construction staging methodology to identify opportunities to schedule intensive works during less sensitive time periods and by providing a clear process for community engagement and complaints. Likewise, the requirements and actionable items within the overarching CNVIS and CNVMP should be considered and adopted where appropriate. Following the consideration of project specific noise mitigation measures, additional noise mitigation measures to be explored are described in the Inland Rail NSW Construction Noise and Vibration Framework (CNVF) and summarised below.

Airborne Noise - Additional Mitigation Measures Matrix				
Time Period	**Exceedance of NML**	**Perception**	**Duration**	**Communication Category/Management Measure**
OOHW Daytime Period Sunday 7am - 6pm (including public holidays)	<5	Noticeable	Any	CO1
	5 - 15	Clearly audible	Any	CO1
	16 - 25	Moderately intrusive	Any	CO1, CO2
	>25	Highly intrusive	Any	CO1, CO2
OOHW Evening Period Monday - Sunday 6pm - 10pm (including public holidays)	<5	Noticeable	Any	CO1
	5 - 15	Clearly audible	Any	CO1
	16 - 25	Moderately intrusive	Any	CO1, CO2
	>25	Highly intrusive	Any	CO1, CO2
			>2 consecutive rest periods	CO1, CO2, RO
OOHW Night Period Monday - Sunday 10pm - 7am (including public holidays)	<5	Noticeable	Any	CO1
	5 - 15	Clearly audible	Any	CO1
	16 - 25	Moderately intrusive	Any	CO1, CO2
			>2 consecutive sleep periods	CO1, CO2, RO, AO
	>25	Highly intrusive	Any	CO1, CO2, RO
			>2 consecutive sleep periods	CO1, CO2, RO, AO, AltA

Vibration - Additional Mitigation Measures Matrix			
Time Period	**Duration**	**Exceedance of 'preferred' value**	**Exceedance of 'maximum' value**
OOHW Daytime Period Sunday 8am-6pm	Any	CO1, CO2	CO1, CO2, RO
OOHW Evening Period Mon-Sun 6pm-10pm	Any	CO1, CO2	CO1, CO2, RO

OOHW Night Period Mon-Sat 10pm-7am Sun 10pm-8am	Any	CO1, CO2, RO	CO1, CO2, RO, AltA

Additional Mitigation Measures

Measure	Abbreviation
Communication (Category 1)[1]	CO1
Communication (Category 2)[2]	CO2
Respite Offer[3]	RO
Alternative Accommodation	AltA
Agreement with Owners	AO

Note 1: CO1: Communication to provide information on the OOHW via methods such as letter box drop, email, newsletter, media advertisements and/ or website prior to the works commencing.
Note 2: CO2: Communication should be personalised (e.g. door knock, meeting, telephone call). Contact with these residents should commence early to enable feedback to be considered by the proposal.
Note 3: RO are not applicable to non-residential receivers. RO may comprise of pre-purchased movie tickets, dinner vouchers or similar. RO can also be provided by limiting high noise generating works and allowing at least a one-hour respite period between blocks of work. Where possible, the timing of this respite should be discussed with the impacted community.

Receiver Types

Code	Description	Code	Description

OOP	Other Outdoor Passive Recreation	OPW	Other Place of Worship
OCC	Other Child Care	OPB	Other Public Building

Construction Noise and Vibration Impact Statement (CNVIS)

This report presents the outcomes of detailed noise/vibration modelling relating to specific construction activities proposed on site in accordance with the methodology outlined in the *Construction Noise and Vibration Management Plan* (CNVMP) and overarching *Construction Noise and Vibration Impact Statement* (CNVIS).
Prior to detailed noise/vibration modelling being undertaken, work activities are reviewed and considered in relation to industry best practice, consistent with the requirements of the CNVMP. Consideration is first given to eliminating the noise/vibration emissions so far as reasonably practicable. Where elimination is not practicable, efforts are been made to reduce the risk as far as practical by implementing noise and vibration management measures as outlined in the overarching CNVIS and CNVMP.
Examples of these measures include selecting the quietest equipment and processes to complete the works, considering staging and periods of respite to minimise prolonged periods of noise and vibration exposure, and maximising distances between construction activities and sensitive receivers.

Consultation with Affected Receivers
In accordance with CoA E78, the CNVIS must include specific mitigation measures identified through consultation with affected sensitive land user(s) and the mitigation measures must be implemented for the duration of the Work. Details of this consultation are provided in the overarching CNVIS for each enhancement site.

Predicted Noise Levels
The assessment presents the highest predicted level at each receiver building, considering predictions at each floor and façade from all potential work areas. The assessment is generally considered conservative as the calculations assume several items of construction equipment are in use at the same time within each work area. The assessment uses ‘realistic worst-case’ scenarios to determine the impacts from the noisiest 15-minute period that is likely to occur for each work scenario.

Assessment Details

Author Name	
Author Email	noiseassessments@martinus.com.au
Author Organisation	Martinus Rail
Project Name	A2I - Albury to Illabo
Assessment Name	110 Crossover Junee
Assessment Number	531
Stage	A2I Construction
Permit Number	
Start Date	2026-09-01
End Date	2026-10-30
Assessment Period	Night - out of hours

Equipment Details

Plant/Equipment	Equipment Sound Power Level (Unadjusted), dBA	Number of Units	Temporary Noise Barrier
1: 110 Crossover - Noise (Height: Ground)	Total: 120		
Ballast Tamper 75% operation	115	1	No
Ballast Regulator 75% operation	114	1	No
Hi-Rail Hydrema 25% operation	107	4	No
Compressor 50% operation	109	2	No
Generator - attenuated 100% operation	92	2	No
Saw - rail 25% operation	118	1	No
Grinder 30% operation	105	1	No
Lighting Tower 100% operation	80	4	No
Hi-Rail Truck/Trolley 25% operation	103	2	No
Water Cart 75% operation	105	1	No

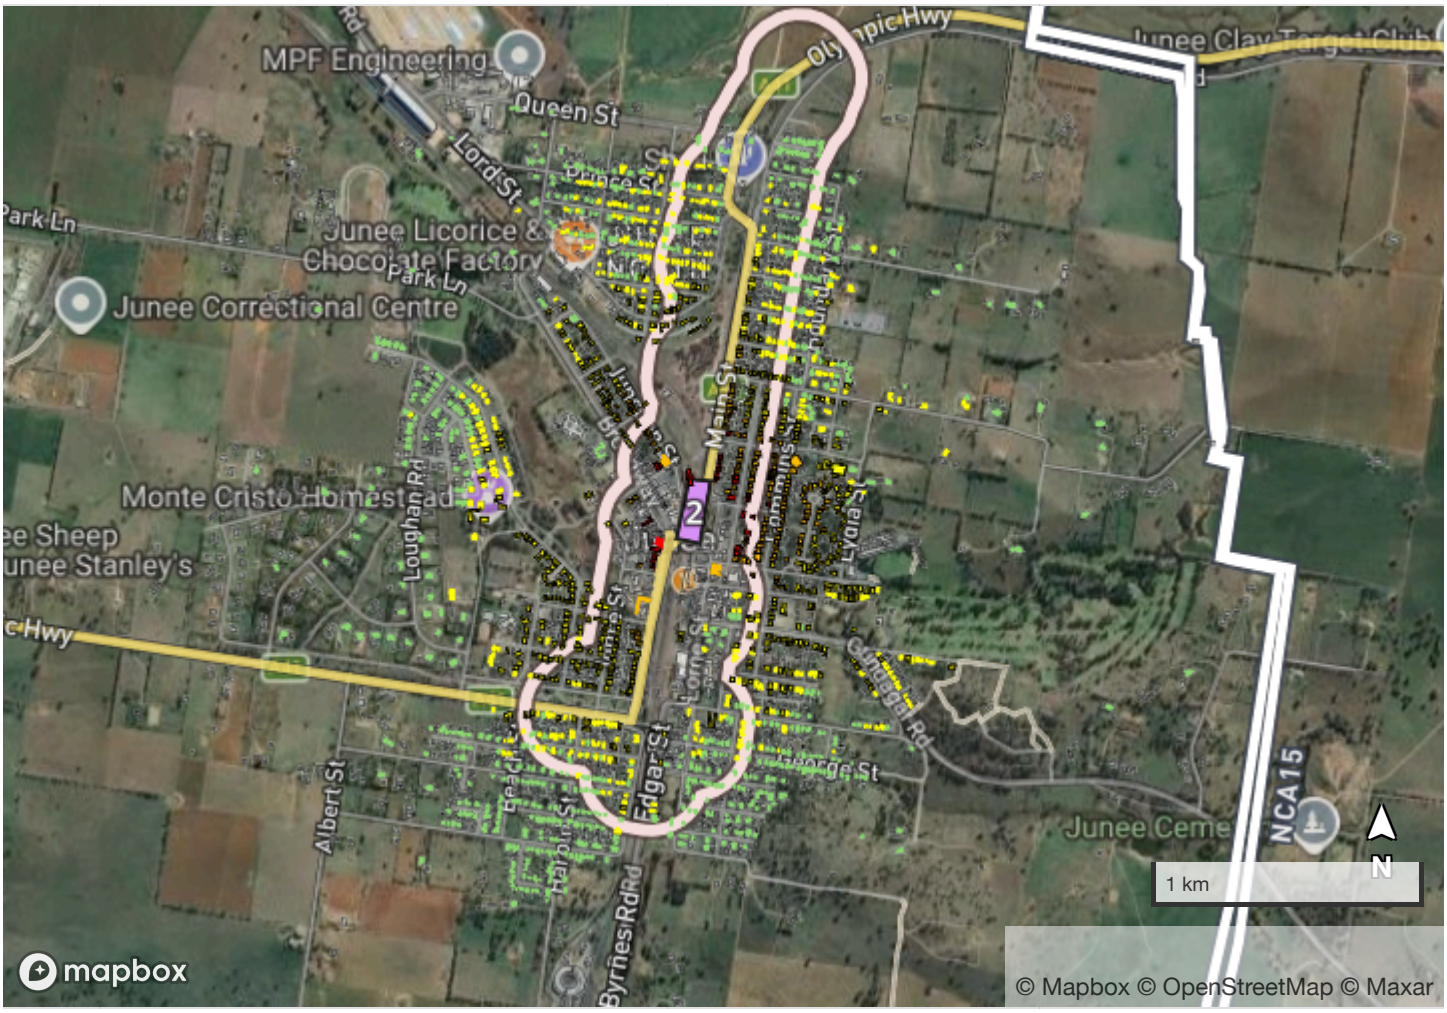

Note 1: Equipment classed as 'annoying' in the *Interim Construction Noise Guideline (DECC, 2009)* include a 5 dB correction.
Note 2: Equipment sound power levels consider the mitigation measures outlined in the overarching CNVIS to provide mitigated results.

Equipment Details

Plant/Equipment	Equipment Sound Power Level (Unadjusted), dBA	Number of Units	Temporary Noise Barrier
Front End Loader 50% operation	113	2	No
Hi-Rail Excavator (20T) 50% operation	105	2	No
2: 110 Crossover - Vibration (Height: Ground)	Total: 118		
Ballast Tamper 75% operation	115	1	No
Ballast Regulator 75% operation	114	1	No
Saw - rail 25% operation	118	1	No
Grinder 30% operation	105	1	No

Note 1: Equipment classed as 'annoying' in the *Interim Construction Noise Guideline (DECC, 2009)* include a 5 dB correction.
Note 2: Equipment sound power levels consider the mitigation measures outlined in the overarching CNVIS to provide mitigated results.

Recommended Mitigation Measures

This assessment has been conducted with regard to the relevant CNVIS and CNVMP. To manage noise and vibration impacts, project specific mitigation measures may be considered such as reviewing construction staging methodology to identify opportunities to schedule intensive works during less sensitive time periods and by providing a clear process for community engagement and complaints. Likewise, the requirements and actionable items within the overarching CNVIS and CNVMP should be considered and adopted where appropriate. Following the consideration of project specific noise mitigation measures, additional noise mitigation measures to be explored are described in the Inland Rail NSW Construction Noise and Vibration Framework (CNVF) and summarised below.

Airborne Noise - Additional Mitigation Measures Matrix				
Time Period	**Exceedance of NML**	**Perception**	**Duration**	**Communication Category/Management Measure**
OOHW Daytime Period Sunday 7am - 6pm (including public holidays)	<5	Noticeable	Any	CO1
	5 - 15	Clearly audible	Any	CO1
	16 - 25	Moderately intrusive	Any	CO1, CO2
	>25	Highly intrusive	Any	CO1, CO2
OOHW Evening Period Monday - Sunday 6pm - 10pm (including public holidays)	<5	Noticeable	Any	CO1
	5 - 15	Clearly audible	Any	CO1
	16 - 25	Moderately intrusive	Any	CO1, CO2
	>25	Highly intrusive	Any	CO1, CO2
			>2 consecutive rest periods	CO1, CO2, RO
OOHW Night Period Monday - Sunday 10pm - 7am (including public holidays)	<5	Noticeable	Any	CO1
	5 - 15	Clearly audible	Any	CO1
	16 - 25	Moderately intrusive	Any	CO1, CO2
			>2 consecutive sleep periods	CO1, CO2, RO, AO
	>25	Highly intrusive	Any	CO1, CO2, RO
			>2 consecutive sleep periods	CO1, CO2, RO, AO, AltA

Vibration - Additional Mitigation Measures Matrix			
Time Period	**Duration**	**Exceedance of 'preferred' value**	**Exceedance of 'maximum' value**
OOHW Daytime Period Sunday 8am-6pm	Any	CO1, CO2	CO1, CO2, RO
OOHW Evening Period Mon-Sun 6pm-10pm	Any	CO1, CO2	CO1, CO2, RO

OOHW Night Period Mon-Sat 10pm-7am Sun 10pm-8am	Any	CO1, CO2, RO	CO1, CO2, RO, AltA

Additional Mitigation Measures

Measure	Abbreviation
Communication (Category 1)[1]	CO1
Communication (Category 2)[2]	CO2
Respite Offer[3]	RO
Alternative Accommodation	AltA
Agreement with Owners	AO

Note 1: CO1: Communication to provide information on the OOHW via methods such as letter box drop, email, newsletter, media advertisements and/ or website prior to the works commencing.
Note 2: CO2: Communication should be personalised (e.g. door knock, meeting, telephone call). Contact with these residents should commence early to enable feedback to be considered by the proposal.
Note 3: RO are not applicable to non-residential receivers. RO may comprise of pre-purchased movie tickets, dinner vouchers or similar. RO can also be provided by limiting high noise generating works and allowing at least a one-hour respite period between blocks of work. Where possible, the timing of this respite should be discussed with the impacted community.

Receiver Types

Code	Description	Code	Description
RES	Residential	OED	Other Educational
COM	Commercial	OHO	Other Hotel
IND	Industrial	OLI	Other Library
OOA	Other Outdoor Active Recreation	OME	Other Medical
OOP	Other Outdoor Passive Recreation	OPW	Other Place of Worship
OCC	Other Child Care	OPB	Other Public Building

SLR Predict (W.008A) – Vibration

Construction Noise and Vibration Impact Statement (CNVIS)

This report presents the outcomes of detailed noise/vibration modelling relating to specific construction activities proposed on site in accordance with the methodology outlined in the *Construction Noise and Vibration Management Plan* (CNVMP) and overarching *Construction Noise and Vibration Impact Statement* (CNVIS).
Prior to detailed noise/vibration modelling being undertaken, work activities are reviewed and considered in relation to industry best practice, consistent with the requirements of the CNVMP. Consideration is first given to eliminating the noise/vibration emissions so far as reasonably practicable. Where elimination is not practicable, efforts are been made to reduce the risk as far as practical by implementing noise and vibration management measures as outlined in the overarching CNVIS and CNVMP.
Examples of these measures include selecting the quietest equipment and processes to complete the works, considering staging and periods of respite to minimise prolonged periods of noise and vibration exposure, and maximising distances between construction activities and sensitive receivers.

Consultation with Affected Receivers
In accordance with CoA E78, the CNVIS must include specific mitigation measures identified through consultation with affected sensitive land user(s) and the mitigation measures must be implemented for the duration of the Work. Details of this consultation are provided in the overarching CNVIS for each enhancement site.

Predicted Noise Levels
The assessment presents the highest predicted level at each receiver building, considering predictions at each floor and façade from all potential work areas. The assessment is generally considered conservative as the calculations assume several items of construction equipment are in use at the same time within each work area. The assessment uses ‘realistic worst-case’ scenarios to determine the impacts from the noisiest 15-minute period that is likely to occur for each work scenario.

Recommended Mitigation Measures

This assessment has been conducted with regard to the relevant CNVIS and CNVMP. To manage noise and vibration impacts, project specific mitigation measures may be considered such as reviewing construction staging methodology to identify opportunities to schedule intensive works during less sensitive time periods and by providing a clear process for community engagement and complaints. Likewise, the requirements and actionable items within the overarching CNVIS and CNVMP should be considered and adopted where appropriate. Following the consideration of project specific noise mitigation measures, additional noise mitigation measures to be explored are described in the Inland Rail NSW Construction Noise and Vibration Framework (CNVF) and summarised below.

Airborne Noise - Additional Mitigation Measures Matrix				
Time Period	**Exceedance of NML**	**Perception**	**Duration**	**Communication Category/Management Measure**
OOHW Daytime Period Sunday 7am - 6pm (including public holidays)	<5	Noticeable	Any	CO1
	5 - 15	Clearly audible	Any	CO1
	16 - 25	Moderately intrusive	Any	CO1, CO2
	>25	Highly intrusive	Any	CO1, CO2
OOHW Evening Period Monday - Sunday 6pm - 10pm (including public holidays)	<5	Noticeable	Any	CO1
	5 - 15	Clearly audible	Any	CO1
	16 - 25	Moderately intrusive	Any	CO1, CO2
	>25	Highly intrusive	Any	CO1, CO2
			>2 consecutive rest periods	CO1, CO2, RO
OOHW Night Period Monday - Sunday 10pm - 7am (including public holidays)	<5	Noticeable	Any	CO1

OOHW Evening Period Mon-Sun 6pm-10pm	Any	CO1, CO2	CO1, CO2, RO

OOHW Night Period Mon-Sat 10pm-7am Sun 10pm-8am	Any	CO1, CO2, RO	CO1, CO2, RO, AltA

Additional Mitigation Measures

Measure	Abbreviation
Communication (Category 1)[1]	CO1
Communication (Category 2)[2]	CO2
Respite Offer[3]	RO
Alternative Accommodation	AltA
Agreement with Owners	AO

Note 1: CO1: Communication to provide information on the OOHW via methods such as letter box drop, email, newsletter, media advertisements and/ or website prior to the works commencing.
Note 2: CO2: Communication should be personalised (e.g. door knock, meeting, telephone call). Contact with these residents should commence early to enable feedback to be considered by the proposal.
Note 3: RO are not applicable to non-residential receivers. RO may comprise of pre-purchased movie tickets, dinner vouchers or similar. RO can also be provided by limiting high noise generating works and allowing at least a one-hour respite period between blocks of work. Where possible, the timing of this respite should be discussed with the impacted community.

Acknowledgement

OzArk acknowledge the traditional custodians of the area on which this assessment took place and pay respect to their beliefs, cultural heritage, and continuing connection with the land. We also acknowledge and pay respect to the post-contact experiences of Aboriginal people with attachment to the area and to the Elders, past and present, as the next generation of role models and vessels for memories, traditions, culture and hopes of local Aboriginal people.

EXECUTIVE SUMMARY

OzArk Environment & Heritage (OzArk) understands that Martinus is proposing to expand the Inland Rail Albury to Illabo (A2I, the project) Construction Impact Zone (CIZ) at Junee (the proposal). The additional land required for the project was not covered by previous assessments. The CIZ extension is located within the Junee Local Government Area.

The CIZ extension covers approximately 460 square metres on the eastern and western sides of the rail corridor in Junee Yard and is to facilitate approved project works including but is not limited to tamping and destressing of the hirail, hirail equipment access and formation works. These works do not entail ground disturbance activities.

As per Condition of Approval (CoA) A15 for the A2I project, ancillary facilities not specifically listed in the A2I Environmental Impact Statement (EIS) and associated documentation (as listed in CoA A1) can be established, as long as "they have no impacts on heritage items (including areas of archaeological sensitivity)" (A15(c)). The following heritage assessment will assess whether CoA A15 can be met in terms of the proposed CIZ extension at Junee.

The assessment for Aboriginal cultural heritage, undertaken in accordance with the *Due Diligence Code of Practice for the Protection of Aboriginal Objects in New South Wales* (Due Diligence Code), determined that the proposed CIZ extension has a low likelihood of harming Aboriginal objects or impacting landscape features with archaeological sensitivity. No previously recorded Aboriginal sites are located within or in the vicinity of the proposed CIZ extension. Furthermore, given the extent of previous land disturbance, there is considered to be a very low likelihood that intact subsurface archaeological deposits are present.

The proposed CIZ extension involves the boundary moving closer to several listed heritage items such that the proposed area of works now abuts the northernmost boundary of the "Junee Station, Yard, and Locomotive Depot" State Heritage Register curtilage. The Junee Railway Station is an item of State heritage significance, listed as the "Junee Station, Yard, and Locomotive Depot" (SHR 01173). The station itself is listed on the Junee LEP (I8) as an item of local significance. It is also listed as an item of state heritage significance on the ARTC's s170 Heritage and Conservation Register (4280760).

In addition, one potential heritage item, the "Junee North Box", was identified immediately adjacent to the western boundary of the proposed CIZ extension. This assessment determined that the Junee North Box does not meet the threshold for local, State, or Commonwealth heritage significance

This assessment concludes that the proposed CIZ extension would result in negligible impacts to the State Heritage Register curtilage of the "Junee Station, Yard, and Locomotive Depot" and the Junee North Box. It can be concluded that the proposed CIZ extension will have "no impacts on

heritage items (including areas of archaeological potential) beyond the impacts approved under the terms of this approval", as long as the measures outlined in Section 6 of the CCHMP and those listed below are implemented. This will ensure that proposed works will not directly or indirectly impact any identified or potential heritage items.

To ensure that the activities within the proposed CIZ extension do not inadvertently impact Aboriginal or non-Aboriginal heritage, the following recommendations should be adhered to:

1. Only the proposed activities outlined in this document have been assessed for their impacts to heritage within the CIZ extension. If additional activities are proposed, then further heritage impact assessment would be required.
2. If works encounter potential Aboriginal or Non-Aboriginal heritage items, the *Unexpected Heritage Finds and Human Remains Procedures,* Appendix B of the CCHMP should be followed.
3. If further extension of the CIZ is required that interacts with listed heritage places, then further assessment would be required to ensure that the provisions of CoA 15(c) can be met.
4. Other provisions as outlined in the CCHMP and *Construction Environmental Management Plan*, specifically regarding heritage inductions and awareness training for work crews, should be followed.

1 INTRODUCTION

1.1 BRIEF DESCRIPTION OF THE PROPOSAL

OzArk Environment & Heritage (OzArk) understands that Martinus is proposing to expand the Inland Rail Albury to Illabo (A2I, the project) Construction Impact Zone (CIZ) at Junee (the proposal). The additional land required for the project was not covered by previous assessments (GML 2022a, GML 2022b, OzArk 2026) (**Figure 1-1**). The CIZ extension is located within the Junee Local Government Area.

Figure 1-1. Aerial showing the proposed CIZ extension in relation to the approved CIZ.

1.2 PREVIOUS HERITAGE ASSESSMENTS

In 2022b, GML Heritage (GML) prepared a *Statement of Heritage Impact* and an *Aboriginal Cultural Heritage Assessment Report* for the Albury to Illabo (A2I) section of the Inland Rail project to enable the required modification of the existing track and associated overhead structures to a sufficient height and width to support the safe running of double-stacked freight trains.

The GML studies assessed both direct heritage impacts within the approved CIZ boundary and indirect impacts to listed historic heritage and Aboriginal sites located adjacent to and within 200 metres (m) of the CIZ boundary. As the assessment beyond the approved CIZ boundary was in

relation to indirect impacts (e.g. vibration, viewsheds and vistas, and curtilages) and not direct impacts as may occur within an extension to the CIZ, it was concluded that additional assessment was required to ensure that the provisions of the Infrastructure Approval could be met in relation to the proposed CIZ extension at Junee.

OzArk in 2026 completed a heritage assessment of the previous CIZ extension (now approved) that covered three zones; Olympic Highway, Junee Railway Station and Kemp Street area. Various signalling and pre-construction activities were required which did not warrant any disturbance of the ground surface and were primarily for access, temporary material laydowns, stockpiling and site compounds. The assessment identified two areas of potential archaeological deposit including old shunting lines and the depot at Junee. Due to the nature of the works required within the CIZ extension (now approved), it was determined that there was low potential for harm to Aboriginal heritage and that identified Local Environmental Plan (LEP) or State significant heritage fabric and values would not be impacted.

As per Condition of Approval (CoA) A15 for the A2I project, ancillary facilities not specifically listed in the A2I Environmental Impact Statement (EIS) and associated documentation (as listed in CoA A1) can be established, as long as "they have no impacts on heritage items (including areas of archaeological sensitivity)" (A15(c)). The following heritage assessment will assess whether CoA A15 can be met in terms of this second proposed CIZ extension at Junee, which is to enable the proposed works outlined below.

1.3 ASSESSMENT APPROACH

OzArk has prepared this heritage assessment with reference to the *Due Diligence Code of Practice for the Protection of Aboriginal Objects in NSW* (Due Diligence Code), Heritage Council's *Investigating Heritage Significance, A guide to identifying and examining heritage items in NSW* and the *Historical Archaeology Code of Practice* to assess whether Aboriginal objects or items of historic significance may be harmed by the proposed CIZ extension. This assessment will inform a Consistency Assessment as per CoA A15.

1.4 PROPOSED ACTIVITY

The proposed extension of the CIZ at Junee by 300 m to the north is to facilitate the approved works and comprises:

- Tamping and destressing of the hirail
- Pedestrian access to hirail
- Movement of hirail equipment
- Formation works

The CIZ extension covers approximately 460 square metres on the eastern and western sides of the rail corridor in Junee Yard, as shown on **Figure 1-2** by the orange shaded areas.

Figure 1-2: Proposed works within CIZ extension (source: Martinus).

2 ABORIGINAL DUE DILIGENCE ASSESSMENT

2.1 INTRODUCTION

Section 57 of the National Parks and Wildlife Regulation 2019 (NPW Regulation) made under the *National Parks and Wildlife Act 1974* (NPW Act) advocates a due diligence process to determining likely impacts on Aboriginal objects. Carrying out due diligence provides a defence to the offence of harming Aboriginal objects and is an important step in satisfying Aboriginal heritage obligations in NSW.

2.2 AHIMS SEARCH

On 28 July 2026, a basic search of the Aboriginal Heritage Information Management System (AHIMS) was undertaken over the CIZ extension (GDA, Zone: 55, Eastings: 552753– 554019, Northings: 6140019– 6143153) (**Appendix 1**). One isolated find site (A2I-2 Junee IF [50-5-0292]) was located within the search area, approximately 695 m north of the northern limit of the proposed CIZ extension. This artefact was recorded as part of the original assessment undertaken for the A2I project.

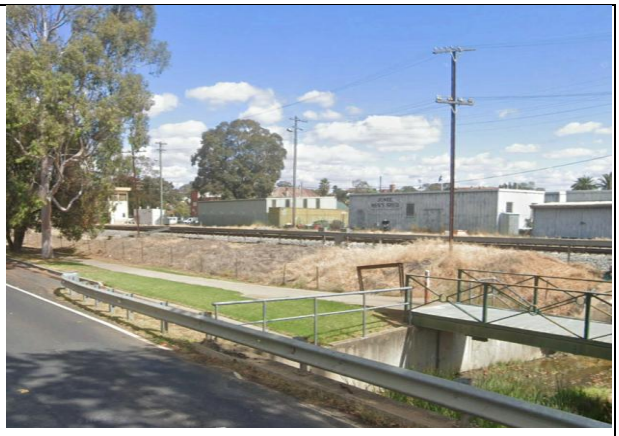

There are no other sources of information to indicate that Aboriginal objects are likely within the collective CIZ extension proposed for Junee.

2.3 LANDFORM

The CIZ extension is located within the developed centre of Junee, which is largely situated within an undulating plain landform. The study area is relatively flat at an elevation of 300 m above sea level Australian Height Datum (**Figure 2-1**).

Rock Creek, a minor second order watercourse, is mapped 25 m north of the CIZ extension. Due to the significant historic land modification in the area, the creek has been diverted through a culvert located within the CIZ extension (**Figure 2-1**). This watercourse is not considered to have been a reliable water source to have supported Aboriginal occupation and has been heavily modified through urban development. More reliable waters are located outside of the CIZ extension including Butlers Gully 390 m southwest and Houlaghans Creek approximately 5.7 kilometres west.

Figure 2-1: Views of the proposed CIZ extension.

	
1) View north along the proposed CIZ extension (image from Google Earth 2026).	2) View southwest at the proposed CIZ extension from the Olympic Highway (image from Google Earth 2026).

2.4 CONCLUSION – ABORIGINAL HERITAGE

The assessment for Aboriginal heritage using the Due Diligence Code has determined that the proposed CIZ extension has a low likelihood of harming Aboriginal objects or landscape features with archaeological sensitivity.

No previously recorded Aboriginal sites are within, or near to, the CIZ extension, and it was determined that due to land use disturbance, there is a very low likelihood of intact, subsurface archaeological deposits. As documented in **Table 2-1** no further archaeological investigation is required.

The works may proceed with caution and in the unlikely event that Aboriginal objects are encountered, refer to the Cultural Heritage Unexpected Find Procedure in Appendix A of the *Inland Rail A2P Albury to Illabo Construction Management Plan*.

The Due Diligence Code is used here to determine whether the proposed extension will have an impact to Aboriginal heritage. The applicability of the Due Diligence Code is laid out in **Table 2-1**.

Table 2-1: Due Diligence Code of Practice application.

Step	Reasoning	Answer
Step 1 Will the activity disturb the ground surface or any culturally modified trees?	The proposed works will not disturb the ground surface. The railway corridor is clear of mature native vegetation. Therefore, the proposal will not harm culturally modified trees. As a precautionary measure, Martinus has elected to proceed with the Due Diligence process.	No
If the answer to Step 1 is 'yes', proceed to Step 2		
Step 2a Are there any relevant records of Aboriginal heritage on AHIMS to indicate presence of Aboriginal objects?	AHIMS indicated that there are no Aboriginal sites within the study area.	No
Step 2b Are there other sources of information to indicate presence of Aboriginal objects?	There are no other sources of information to indicate that Aboriginal objects are likely in the study area, although it is noted that there is a general likelihood for landforms in the region to contain Aboriginal objects.	No
Step 2c Will the activity impact landforms with archaeological sensitivity as defined by the Due Diligence Code?	Landforms with identified archaeological sensitivity are present Rock Creek is 25 m north of the CIZ extension.	Yes
If the answer to any stage of Step 2 is 'yes', proceed to Step 3		
Step 3 Can harm to Aboriginal objects listed on AHIMS or identified by other sources of information and/or can the carrying out of the activity at the relevant landscape features be avoided?	The proposal does not involve ground disturbing works and as such, will not impact landforms with archaeological sensitivity as identified in the Due Diligence Code.	No
Conclusion		
AHIP not necessary. Proceed with caution.		

3 NON-ABORIGINAL HERITAGE ASSESSMENT: BACKGROUND

3.1 DESKTOP DATABASE SEARCHES CONDUCTED

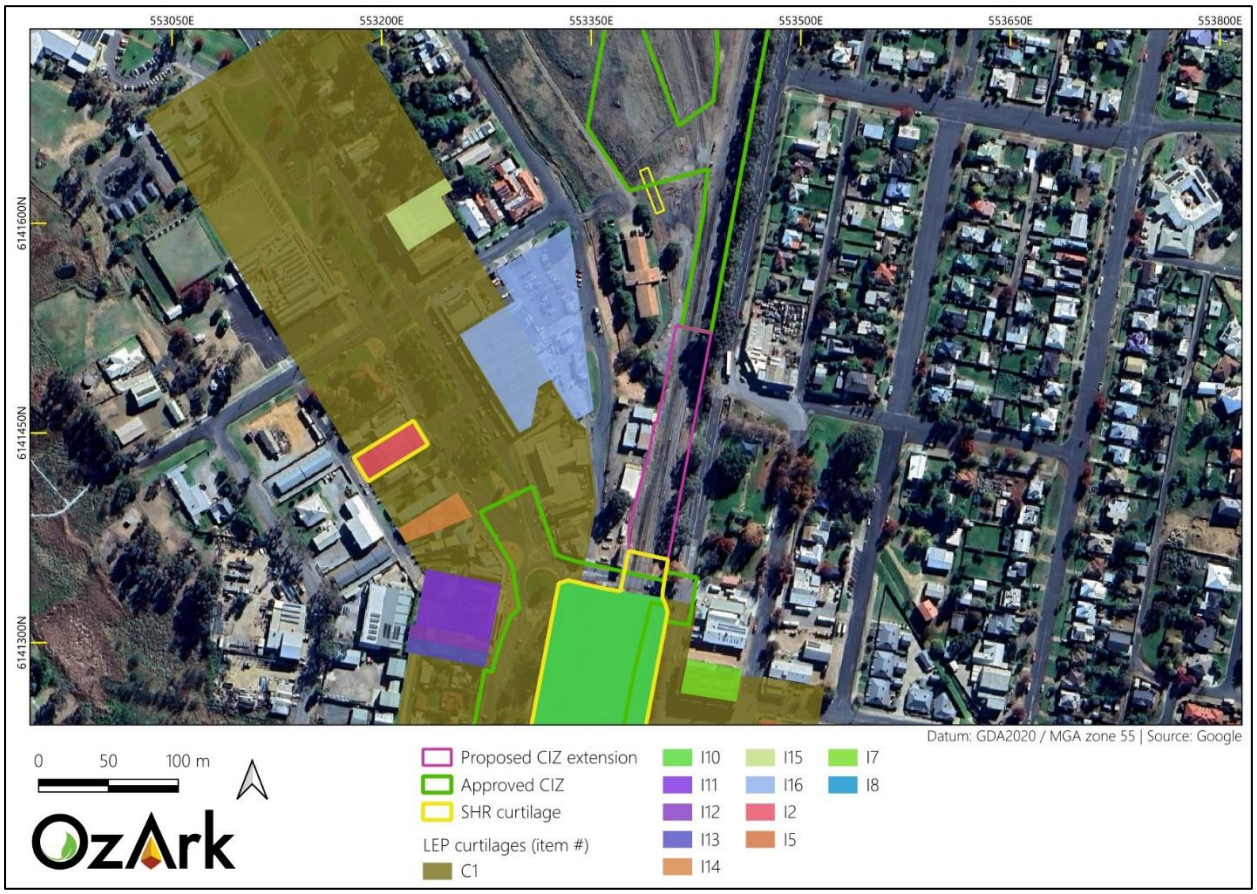

A desktop search was conducted on the following databases to identify any potential previously recorded heritage within the study area. The results of this search are summarised in **Table 3-1**.

Table 3-1: Historic heritage: desktop-database search results.

Name of Database Searched	Date of Search	Type of Search	Comment
National and Commonwealth Heritage Listings	27 July 2026	Junee LGA	No heritage items are located within the CIZ extension
State Heritage Listings	27 July 2026	NSW State Heritage Register (SHR)	No SHR sites within CIZ extension however the south boundary abuts the "Junee Station, Yard, and Locomotive Depot" (SHR 01173).
Local Environment Plan	27 July 2026	Junee Local Environmental Plan 2012	No heritage items are located within the CIZ extension

A search of the Heritage Council of NSW administered heritage databases and the Junee LEP returned no records for historical heritage sites within the designated search areas (**Figure 3-1**). However, the proposed CIZ extension abuts the northernmost boundary of the "Junee Station, Yard, and Locomotive Depot" SHR curtilage (**Table 3-1**). For the purposes of this report, this heritage item is hereafter to as the Junee Railway Station.

Figure 3-1: Heritage curtilages in relation to the proposed CIZ extension.

3.2 LISTED HERITAGE ITEMS ABUTTING THE CIZ EXTENSION

The Junee Railway Station is an item of State heritage significance, listed as the "Junee Station, Yard, and Locomotive Depot" (SHR 01173). The station itself is listed on the Junee LEP (I8) as an item of local significance. It is also listed as an item of state heritage significance on the ARTC's s170 Heritage and Conservation Register (4280760).

The LEP listing for the station describes the significance of the station as:

> *Junee Railway Station is of architectural significance and interest and the station is very important historically in the town. Junee owed its rapid growth and prosperity late last century to its development into a major rail centre.*
>
> *The station, dating from 1885, is of social importance to the community on account of its lengthy association with rail travel at Junee.*
>
> *The Railway Station is a key element in the streetscape of Junee, as it plays an important role in creating the historic qualities of central Junee."*

As the history of the item has been documented in-depth through the various previous assessments at Junee for the project (GML 2022b, OzArk 2025), it is not presented here.

3.3 POTENTIAL HERITAGE ITEM – JUNEE NORTH BOX

Desktop inspection of the proposed CIZ extension identified a signal/shunting box (henceforth the structure) situated immediately adjacent to the CIZ extension west boundary (**Figure 3-2**). The structure appears identical in construction the signal box located within the Junee Railway Station LEP curtilage approximately 570 m southwest, likely built contemporaneously. The structure is of fibrous-cement sheeting construction on brick foundations with 'Junee North Box' signage on the east wall exterior. The roof is flat with the mechanical interlocking shunting mechanism still visible protruding from the eastern wall and extending north. The exterior of the structure from a desktop level is in overall good condition however is currently disused.

Examination of historic imagery from the mid-1940s (**Figure 3-3** and **Figure 3-4**) illustrates that the structure situated north of a level crossing replaced an older open gable signal box located further north. By 1947 the former signal box was replaced by the current structure, which was retired from active use by 2007 with the introduction of the modern centralised signalling system.

The Junee North Box was originally adjacent to an overhead pedestrian bridge (**Figure 3-4**). This bridge was removed, likely following the derailment of a freight train in 1999, that had caused damage to both the pedestrian bridge and signal gantry. No remnant elements of these structures are visible at a desktop level.

Figure 3-2: Google earth view of the identified northern box (yellow) and towards the proposed CIZ extension (red).

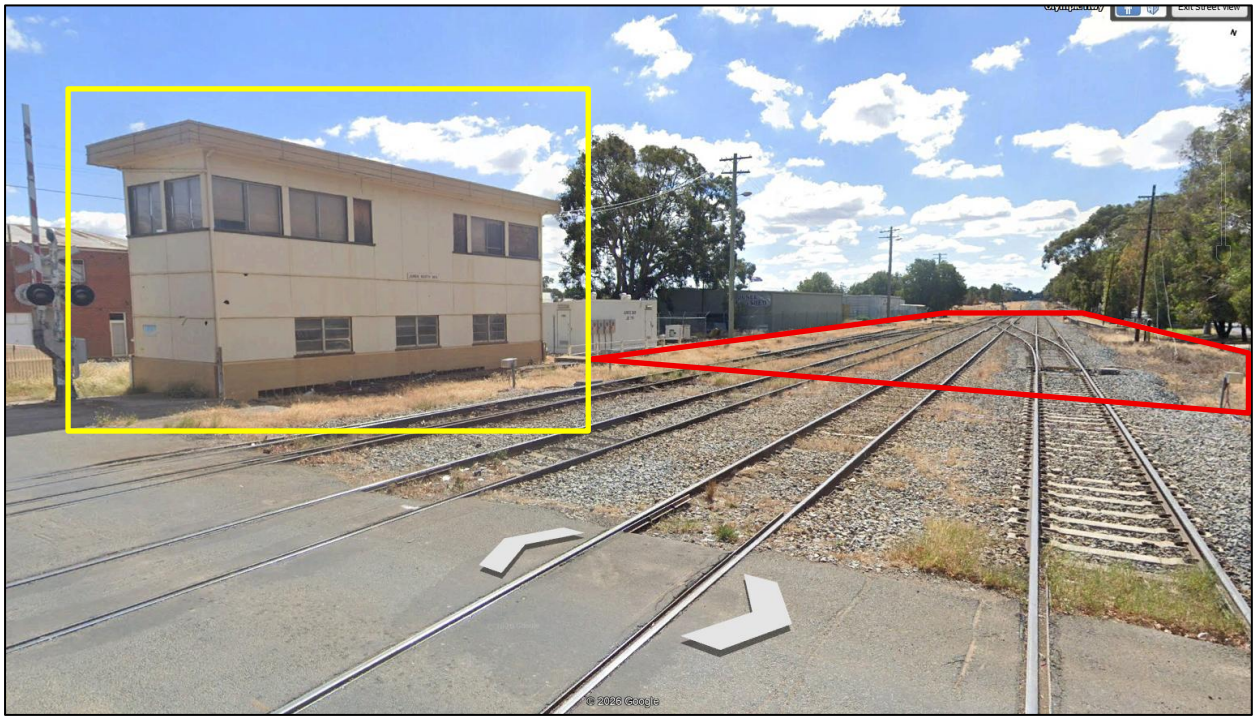

Figure 3-3: View north of the former northern box in circa 1940. The proposed CIZ extension is shown approximately in red (NSW state archives collection).

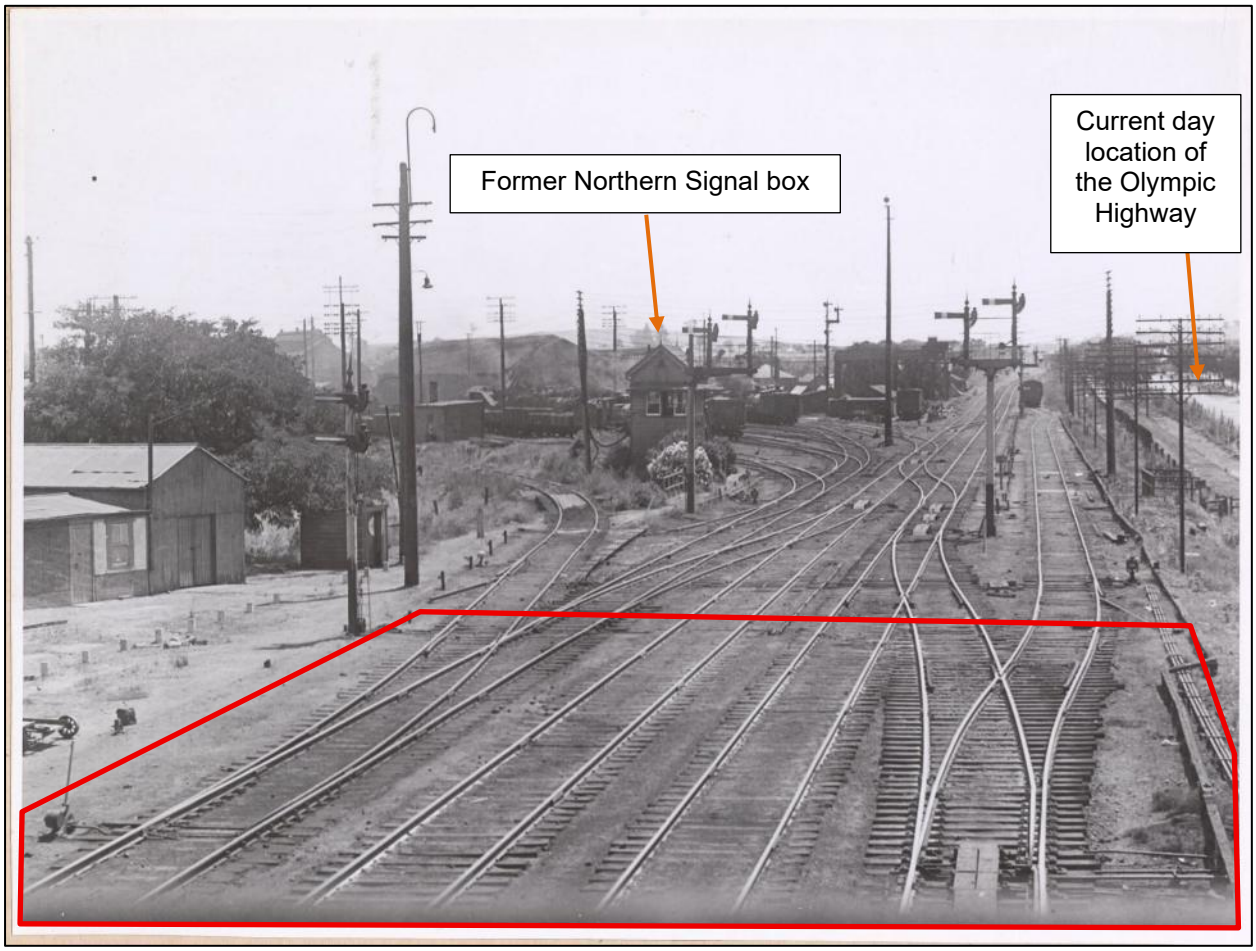

Figure 3-4: View of the northern box in 2026 and 1947.

1) View west of the northern box from the Olympic Highway (image from Google Earth 2026).

2) View west of the northern box and level crossing 29 July 1947 (NSW state archives collection).

3.3.1 Statement of Significance

Heritage significance is the sum of the heritage values that a place or object has, as assessed against the NSW Heritage Council's assessment criteria (DPE 2023b) and can represent, as set out in the Burra Charter (Article 1.2), the aesthetic, historic, scientific, social, or spiritual value for past, present or future generations.

Items of state heritage significance have values for the people of NSW, while items of local heritage significance have values important primarily to the local community. A local heritage listing is included in a LEP made under the Environmental Planning and Assessment Act 1979 (EP&A Act).

The tracks have been assessed (**Table 3-2**) using current assessment thresholds established by the Heritage Council of NSW (DPE 2023b).

Table 3-2: Assessment of significance: Northern Box.

NSW Heritage Council Criteria	Description	Comment
a) Historic	An item is important in the course, or pattern, of NSW's cultural or natural history (or the cultural or natural history of the local area).	The item does not meet this criterion.
b) Associative	An item has strong or special association with the life or works of a person, or group of persons, of importance in NSW's cultural or natural history (or the cultural or natural history of the local area).	The item does not meet this criterion.
c) Aesthetic/Technical	An item is important in demonstrating aesthetic characteristics and/ or a high degree of creative or technical achievement in NSW (or the local area).	The item does not meet this criterion.
d) Social	An item has strong or special association with a particular community or cultural group in NSW (or the local area) for social, cultural, or spiritual reasons.	The item does not meet this criterion.
e) Scientific	An item has potential to yield information that will contribute to an understanding of NSW's cultural or natural history (or the cultural or natural history of the local area).	The item does not meet this criterion.
f) Rarity	An item possesses uncommon, rare, or endangered aspects of NSW's cultural or	The item does not meet this criterion.

NSW Heritage Council Criteria	Description	Comment
	natural history (or the cultural or natural history of the local area).	
g) Representativeness	An item is important in demonstrating the principal characteristics of a class of NSW's cultural or natural places; or cultural or natural environments (or a class of the local area's cultural or natural places; or cultural or natural environments).	The item does not meet this criterion.

The Junee North Box, while relevant to the evolving railway history of Junee, is not of unique or rare construction with other examples present with the Southern Junee Box present further south retained within the Junee Railway Station SHR curtilage and at other railway station groups in NSW. Further, the structure is not aesthetic or associated with a historic event or individual. The Junee North Box has no local, state or Commonwealth heritage significance.

3.4 IMPACT STATEMENT

All listed heritage fabric relevant to the Junee Railway Station is situated further south within the SHR curtilage and will be separated from the CIZ extension by the existing level crossing. As such, the proposed works will avoid all state significant heritage fabric of the "Junee Station, Yard, and Locomotive Depot". As such, it is considered that the impact on the heritage values of the Junee Railway Station will be negligible.

While the Junee North Box is adjacent to the proposed CIZ extension, the proposed work will not require any ground disturbance works and there is no foreseen risk of harm to the structure by its proximity. Further this assessment determined that the structure is not of heritage significance.

3.4.1 Archaeological potential

The proposed CIZ extension is confined to the existing railway corridor. Desktop assessment indicates that this area has been subject to repeated disturbance associated with the construction and maintenance of rail and signalling infrastructure. Further, OzArk (2026) identified archaeological deposits further north which does not extend into the proposed CIZ extension. As such, they have a low likelihood of containing unrecorded, significant, historic archaeological deposits.

3.5 CONCLUSION – NON-ABORIGINAL HERITAGE

This assessment concludes that the proposed CIZ extension would result in negligible impacts to the SHR curtilage of the "Junee Station, Yard, and Locomotive Depot" and the Junee North Box.

It can be concluded that the proposed CIZ extension will have "no impacts on heritage items (including areas of archaeological potential) beyond the impacts approved under the terms of this approval", as long as the measures outlined in Section 6 of the CCHMP (Stage B) and those listed below are implemented. This will ensure that proposed works will not directly or indirectly impact any identified or potential heritage items.

4 RECOMMENDATIONS

To ensure that the activities within the proposed CIZ extension do not inadvertently impact Aboriginal or non-Aboriginal heritage, the following recommendations should be adhered to:

1. Only the proposed activities outlined in this document have been assessed for their impacts to heritage within the CIZ extension. If additional activities are proposed, then further heritage impact assessment would be required.
2. If works encounter potential Aboriginal or Non-Aboriginal heritage items, the *Unexpected Heritage Finds and Human Remains Procedures,* Appendix B of the CCHMP should be followed.
3. If further extension of the CIZ is required that interacts with listed heritage places, then further assessment would be required to ensure that the provisions of CoA 15(c) can be met.
4. Other provisions as outlined in the Stage B CCHMP and *Construction Environmental Management Plan*, specifically regarding heritage inductions and awareness training for work crews, should be followed.

Appendix D Biodiversity Assessment Report Memo (ECE)

Clint Dedden
Environmental Approvals Advisor
Martinus Rail Pty Ltd

12th August 2026

Biodiversity Memorandum: Inland Rail (Junee Precinct)

Dear Clint,

Martinus Rail Pty Ltd (Martinus) on behalf of the Australian Rail Track Corporation (ARTC) propose to undertake ballast tamping and destressing works in the Junee Precinct to support the installation of the crossover replacement at Points 110A and 110B to facilitate the construction of the Albury to Illabo (A2I) Inland Rail upgrade (the Proposed Change).

The Proposed Change is located outside of the construction boundary of the Inland Rail program (the Project) and was not assessed as a part of the Inland Rail, Albury to Illabo Revised Technical Paper 8: Biodiversity Development Assessment Report (BDAR) (WSP, 2024).

1.1 Scope of Assessment

East Coast Ecology Pty Ltd (ECE) was commissioned by ARTC c/- Martinus to prepare a Biodiversity Memo, for the Proposed Change. The scope of this assessment was to identify and assess impacts to species and ecological communities listed as threatened under the *Biodiversity Conservation Act 2016* (NSW) (BC Act), *Fisheries Management Act 1994* (FM Act) and Matters of National Environmental Significance (MNES) listed under the *Environment Protection and Biodiversity Conservation Act 1999* (EPBC Act) and where relevant, the requirements of the *Biosecurity Act 2015* (NSW), and relevant State Environmental Planning Policies (SEPPs).

The area assessed in this memo has been defined by representatives of Martinus, this memo has been prepared to accompany a Consistency Assessment (CA) in relation to the Proposed Change and is hereafter referred to as the Subject Land.

1.2 The Subject Land

The Subject Land is located in the Town of Junee in the Junee Local Government Area (LGA), covering an area of approximately 0.46ha. The Subject Land is depicted in **Figure 1**.

Figure 1. Location of the Subject Land.

2. METHODS

A thorough literature review of local information relevant to the Subject Land was undertaken. Searches using NSW Wildlife Atlas (BioNet) (NSW DCCEEW, 2025a), the Commonwealth Protected Matters Search Tool (PMST) (DCCEEW, 2025) and the Fisheries Spatial Data Portal (DPI, 2025) were conducted to identify all current threatened flora and fauna, as well as migratory fauna records, within a 5km radius of the Subject Land. A literature review was also undertaken of all relevant project documentation, including;

- Biodiversity Development Assessment Report (WSP, 2024), and
- Environmental Impact Statement (ARTC, 2022).

This assessment provides the results of the assessment of the sites that were determined to not contain PCT's vegetation or other ecological constraints.

2.1 Native Vegetation

A review of the State Vegetation Type Map (NSW DCCEEW, 2025b) was used to assist in the identification of Plant Community Types (PCTs) within and surrounding the Subject Land. The PCT of 'best-fit' was determined based on the floristic descriptions within the BioNet Vegetation Classification System database (NSW DCCEEW, 2025c).

2.2 Threatened Flora Survey Methods

Threatened flora that are known or likely to occur within the Subject Land and immediate surrounds (i.e. within 5km) were identified following a review of BioNet and the PMST. Soil mapping (NSW DCCEEW, 2025d) and topography (Google Earth) were also used to provide further context on habitat constraints for threatened flora.

Targeted surveys were undertaken by Ecologist; Chris Keogh and Josh Brown on the 2nd March and 14th April 2025, using parallel field traverses in accordance with the 'Surveying threatened plants and their habitats - NSW survey guide for the Biodiversity Assessment Method' (DPIE, 2020). All vegetated areas within the Subject Land were surveyed.

2.3 Threatened Fauna Survey Methods

Threatened fauna were recorded opportunistically however, their habitats (e.g. waterbodies, rocky areas, tree hollows), were targeted during the parallel field traverses. Potential habitat constraints within the broader area (500m buffer) were assessed using Google Earth, soil landscape mapping (NSW DCCEEW, 2025d) and recent vegetation mapping (NSW DCCEEW, 2025b).

3. EXISTING ENVIRONMENT

3.1 Rivers, streams, estuaries and wetlands

One mapped watercourse intersects the Subject Land in the central extent. The Subject Land is therefore associated with a riparian buffer zone.

3.2 Habitat Connectivity

Negligible terrestrial habitat connectivity exists between the Subject Land and the broader landscape due to historical clearing and existing infrastructure (e.g. roads, railway and built areas).

The Subject Land may provide mobile species with minor refuge while moving throughout the landscape, however due to the degraded condition of the vegetation, it is not considered likely that threatened species would be reliant on this area as a part of their life cycle.

3.3 Karst, Caves, Crevices, Cliffs, Rocks or Other of Geological Features of Significance

The Subject Land did not contain any areas of geological significance, such as karsts, caves, cliffs or crevices. The Subject Land was not mapped as occurring on acid sulfate soils nor mapped as having risk/ probability of exhibiting occurrence of acid sulfate soils.

3.4 Areas of Outstanding Biodiversity Value

No Areas of Outstanding Biodiversity Value occur on the Subject Land or the surrounding area.

3.5 Topography, Geology and Soils

The Subject Land is mapped as occurring on the 'Currajong' soil landscape', characterised by, gentle to undulating footslopes and colluvial plains formed on Quaternary colluvium derived from Silurian granites. The Subject Land occurs on gently inclined terrain, ranging from 304m above sea level (asl) to 320m asl (Google Earth).

3.6 Mapped Native Vegetation Communities – NSW State Vegetation Type Map

The NSW State Vegetation Type Map (NSW DCCEEW, 2024b) indicated the absence of PCTs within or adjoining, the Subject Land (**Figure 2**). The Subject Land has been mapped as 'Not classified'.

Figure 2. State Vegetation Type Map.

4. RESULTS

4.1 Vegetation Communities.

Due to historical agricultural, infrastructure, residential and industrial development within the Subject Land, and specifically a lack of native and/ or diagnostic species for candidate PCTs, the following vegetation community type described by WSP (2024) was assigned:

- Miscellaneous Ecosystems – 'Highly Disturbed areas with no or limited Native Vegetation'.

This vegetation community type is consistent with vegetation types described in the approved BDAR.

Table 1. Vegetation communities identified within the Subject Land.

Community Name	Area within the Subject Land (ha)
Miscellaneous Ecosystems – Highly Disturbed areas with no or limited Native Vegetation	0.27ha
Total Area	**0.27ha**

4.1.1 Community type Miscellaneous Ecosystems – Highly Disturbed areas with no or limited Native Vegetation

Vegetation within the Subject Land did not contain or had very limited native species and is dominated by exotic species, and provides limited ecological function (WSP, 2024) (**Figure 3**). Highly Disturbed areas with no or limited native vegetation includes areas that are not consistent with the definition of a PCT and are not required to be assessed for ecosystem credits, per Section 9.3 of the BAM (DPIE, 2020a).

Descriptions of the vegetation types identified is provided in **Table 2**.

Table 2. Miscellaneous Ecosystems - Highly Disturbed areas with no or limited Native Vegetation, vegetation identified within the Subject Land.

Miscellaneous Ecosystems - Highly Disturbed areas with no or limited Native Vegetation	
Novel Vegetation Type	**Miscellaneous Ecosystems - Highly Disturbed areas with no or limited Native Vegetation**
	
Extent	0.27ha
Description of vegetation	The vegetation within this zone was heavily comprised of exotic ground cover species such as *Cenchrus macrourus, Cenchrus clandestinus, Chloris Virgata, Panicum sp. Verbena bonariensis, Phalaris aquatica* and *Flaxleaf fleabane.* This zone was almost entirely developed and displayed a long history of disturbance from infrastructure such as roads, rail, carparks and concrete footpaths.

Figure 3. Field-validated Vegetation Communities.

4.2 Threatened Flora

BioNet and PMST searches revealed seven threatened flora species occur, or have potential to occur, within a ~5km radius of the Subject Land.

Table 3. Threatened flora with potential to occur within the Subject Land.

Scientific Name	Common Name	BC Act	EPBC Act	Records within 5km
Austrostipa wakoolica	Wakool Spear-grass	E	E	Modelled Only
Caladenia arenaria	Sand-hill Spider-orchid	E	E	Modelled Only
Caladenia concolor	Crimson Spider-orchid	E	V	Modelled Only
Lepidium aschersonii	Spiny Peppercress	V	V	Modelled Only
Prasophyllum petilum	Tarengo Leek Orchid	E	E	Modelled Only
Swainsona murrayana	Slender Darling-pea	V	V	Modelled Only
Vincetoxicum forsteri	-	V	E	Modelled Only

V – Vulnerable; E – Endangered; EP – Endangered Population; CE – Critically Endangered

The results from the site assessment, including targeted flora surveys and habitat assessment, were used to assess each species' likelihood of occurrence within the Subject Land. After carrying out the assessment, the assessor determined that the habitat is substantially degraded such that all potential threatened flora species are unlikely to occur within the Subject Land.

4.3 Threatened Fauna

BioNet and PMST searches revealed 30 threatened fauna occur, or have potential to occur, within a ~5km radius of the Subject Land.

Table 4. Threatened fauna with potential to occur within the Subject Land.

Scientific Name	Common Name	BC Act	EPBC Act	Records within 5km
Anseranas semipalmata	Magpie Goose	V	-	3
Anthochaera phrygia	Regent Honeyeater	E	CE	1
Aphelocephala leucopsis	Southern Whiteface	V	V	1
Aprasia parapulchella	Pink-tailed Worm-lizard	V	V	Modelled Only
Botaurus poiciloptilus	Australasian Bittern	E	E	2
Calidris acuminata	Sharp-tailed Sandpiper	-	V	Modelled Only
Circus assimilis	Spotted Harrier	V	-	2
Climacteris picumnus victoriae	Brown Treecreeper (south-eastern)	V	V	Modelled Only
Epthianura albifrons	White-fronted Chat	V	-	11

Scientific Name	Common Name	BC Act	EPBC Act	Records within 5km
Falco hypoleucos	Grey Falcon	-	V	Modelled Only
Falco subniger	Black Falcon	V	-	4
Grantiella picta	Painted Honeyeater	-	V	Modelled Only
Hieraaetus morphnoides	Little Eagle	V	-	14
Hirundapus caudacutus	White-throated Needletail	-	V	Modelled Only
Lathamus discolor	Swift Parrot	E	CE	1
Lophochroa leadbeateri leadbeateri	Major Mitchell's Cockatoo	V	E	Modelled Only
Melanodryas cucullata cucullata	South-eastern Hooded Robin	E	E	Modelled Only
Neophema chrysostoma	Blue-winged Parrot	V	V	Modelled Only
Neophema pulchella	Turquoise Parrot	V	-	1
Nyctophilus corbeni	Corben's Long-eared Bat	V	V	Modelled Only
Petroica boodang	Scarlet Robin	V	-	2
Petroica phoenicea	Flame Robin	V	-	7
Phascolarctos cinereus	Koala	E	E	Modelled Only
Polytelis swainsonii	Superb Parrot	V	V	9
Polytelis swainsonii	Superb Parrot	V	V	Modelled Only
Pomatostomus temporalis temporalis	Grey-crowned Babbler (eastern subspecies)	V	-	1
Pteropus poliocephalus	Grey-headed Flying-fox	V	V	11
Rostratula australis	Australian Painted Snipe	E	E	Modelled Only
Stagonopleura guttata	Diamond Firetail	V	V	2
Tringa nebularia	Common Greenshank	E	E	2

V – Vulnerable; E – Endangered; EP – Endangered Population; CE – Critically Endangered

The degraded vegetation within the Subject Land would only provide low-quality foraging habitat for threatened species. There was no breeding habitat identified (in the form of hollow-bearing trees, rocky outcrops/ caves, waterbodies, large trees or human-made structures).

Due to the absence of suitable habitat constraints and/ or the degraded nature of potential habitat and historical clearing, it was determined that the habitat is substantially degraded such that potential threatened fauna are unlikely to utilise the Subject Land.

4.4 Migratory Species

Database searches revealed seven migratory terrestrial species, or their habitat, are known to occur within the Subject Land (**Table 5**). These species are unlikely to occur due to the lack of suitable habitat in the Subject Land (i.e. ornamental tree dominated) and these species do not breed in Australia.

Table 5. Migratory terrestrial species with potential to occur in the Subject Land.

Species	EPBC Act Status
Actitis hypoleucos (Common Sandpiper)	Migratory, CAMBA, JAMBA, ROKAMBA
Calidris acuminata (Sharp-tailed Sandpiper)	Migratory, CAMBA, JAMBA, ROKAMBA
Calidris ferruginea (Curlew Sandpiper)	Critically Endangered, Migratory, CAMBA, JAMBA, ROKAMBA
Calidris melanotos (Pectoral Sandpiper)	Migratory, JAMBA, ROKAMBA
Gallinago hardwickii (Latham's Snipe)	Vulnerable, Migratory, JAMBA, ROKAMBA
Hirundapus caudacutus (White-throated Needletail)	Vulnerable, Migratory, CAMBA, JAMBA, ROKAMBA
Motacilla flava (Yellow Wagtail)	Migratory, CAMBA, JAMBA, ROKAMBA

CAMBA = China-Australia Migratory Bird Agreement, JAMBA = Japan-Australia Migratory Bird Agreement, ROKAMBA = Republic of Korea-Australia Migratory Bird Agreement and Bonn = Convention on the Conservation of Migratory Species of Wild Animals

5. IMPACT SUMMARY

The proposed activity will require impacts to the following:

- 0.27ha of Miscellaneous Ecosystems - Highly Disturbed areas with no or limited Native Vegetation.

No removal or trimming of native or non-native vegetation will occur; only minor ground disturbance will take place in grassed ground areas adjacent to the rail/ballast extents. Within the context of the surrounding landscape, it is unlikely this vegetation would be utilised given the presence of superior habitats adjoining the Subject Land, and in the broader landscape. Further, it is considered unlikely that any threatened species would occupy the Subject Land due to evidence of ongoing disturbance (railway, roads, residential housing). As such, no threatened flora or fauna are likely to be significantly impacted.

6. LEGISLATION

6.1 Matters of National Environmental Significance

Under the EPBC Act, a proponent must not take an action if that action will have, or is likely to have, a significant impact on matters protected under the EPBC Act, referred to as MNES. The EPBC Act identifies eight MNES:

- World Heritage properties
- National Heritage places
- Wetlands of international importance (those listed under the Ramsar Convention)
- Listed threatened species and communities
- Migratory species listed under international agreements
- Great Barrier Reef Marine Park
- Commonwealth marine areas
- Nuclear actions

The PMST identified the following as potentially occurring within the Subject Land or surrounding area:

- 3 Threatened Ecological Communities
- 40 Threatened species
- 7 Migratory species

No MNES have been identified in or adjoining the Subject Land.

6.2 State Environmental Planning Policy (Resilience and Hazards) 2021

The State Environmental Planning Policy (Resilience and Hazards) 2021 (Resilience and Hazards SEPP) commenced on the 1st of March 2022 and replaces the following former SEPPs:

- State Environmental Planning Policy (Coastal Management) 2018
- State Environmental Planning Policy 33 – Hazardous and Offensive Development, and
- State Environmental Planning Policy 55 – Remediation of Land.

The Subject Land is not situated within the 'Coastal Zone' therefore this SEPP does not apply.

6.3 *Fisheries Management Act 1994*

The FM Act aims to conserve, develop, and share the fishery resources of NSW for the benefit of present and future generations including conserving fish stocks and key fish habitats and promoting ecologically sustainable development.

The proposed activity does not require works within mapped KFH, nor did threatened aquatic species or marine vegetation protected under the FM Act occur within the Subject Land. As such, the activity would not impact upon KFH, nor are there any legislative requirements or notifications required under this Act.

6.4 *Biosecurity Act 2015*

The *Biosecurity Act 2015* (NSW) provides a framework for the prevention, elimination and minimisation of biosecurity risks posed by an activity as a matter of biosecurity. As defined in Part 3, section 23 of this Act, any non-conformance by an individual is defined as guilty of an offence. No priority weeds were identified

within the Subject Land. Should an infestation occur, all priority weeds are to be appropriately managed in accordance with the *Biosecurity Act 2015*.

7. MANAGEMENT MEASURES AND IMPLEMENTATION

The potential impacts on biodiversity identified for the Proposed Change can be appropriately managed in accordance with the Conditions of Approval and through implementation of the updated management measures outlined in the Preferred Infrastructure Report Submissions Report for the Project.

8. CONCLUSION

The proposed activity will require impacts to the following:

- 0.27ha of Miscellaneous Ecosystems - Highly Disturbed areas with no or limited Native Vegetation.

No impacts to threatened species, populations or ecological communities are expected as a result of the proposed activity.

Although outside the assessed construction boundary for the Project, the biodiversity impacts are considered consistent with the initial assessment (WSP, 2024), and no further offsets (ecosystem or species) would be required.

If you have any queries, please feel free to contact me.

Sincerely,

Alex Graham *BSc (Biology), Grad Dip (Bushfire Protection)*
Director/ Principal Ecologist - Accredited Biodiversity Assessor (BAAS19040)
E: alex.graham@ececology.com.au

Appendix E Unexpected Finds Procedure (Heritage and Human Remains)

Docusign Envelope ID: 48BDB7AD-A0C7-8AA6-807F-DA2CDEDCBD18

ABORIGINAL AND NON-ABORIGINAL HERITAGE: UNEXPECTED FINDS PROCEDURE

An Aboriginal artefact is anything that is the result of past Aboriginal activity. This includes stone (artefacts, rock engravings etc.), plant (culturally scarred trees) and animal bone (if showing signs of modification; i.e. smoothing, use). Human bone (skeletal remains) may also be uncovered while onsite.

A historic artefact is anything that is the result of past activity not related to Aboriginal occupation. This includes pottery, wood, glass and metal objects as well as the built remains of structures, sometimes heavily ruined.

In the event of an unexpected heritage find, the following protocol will apply:

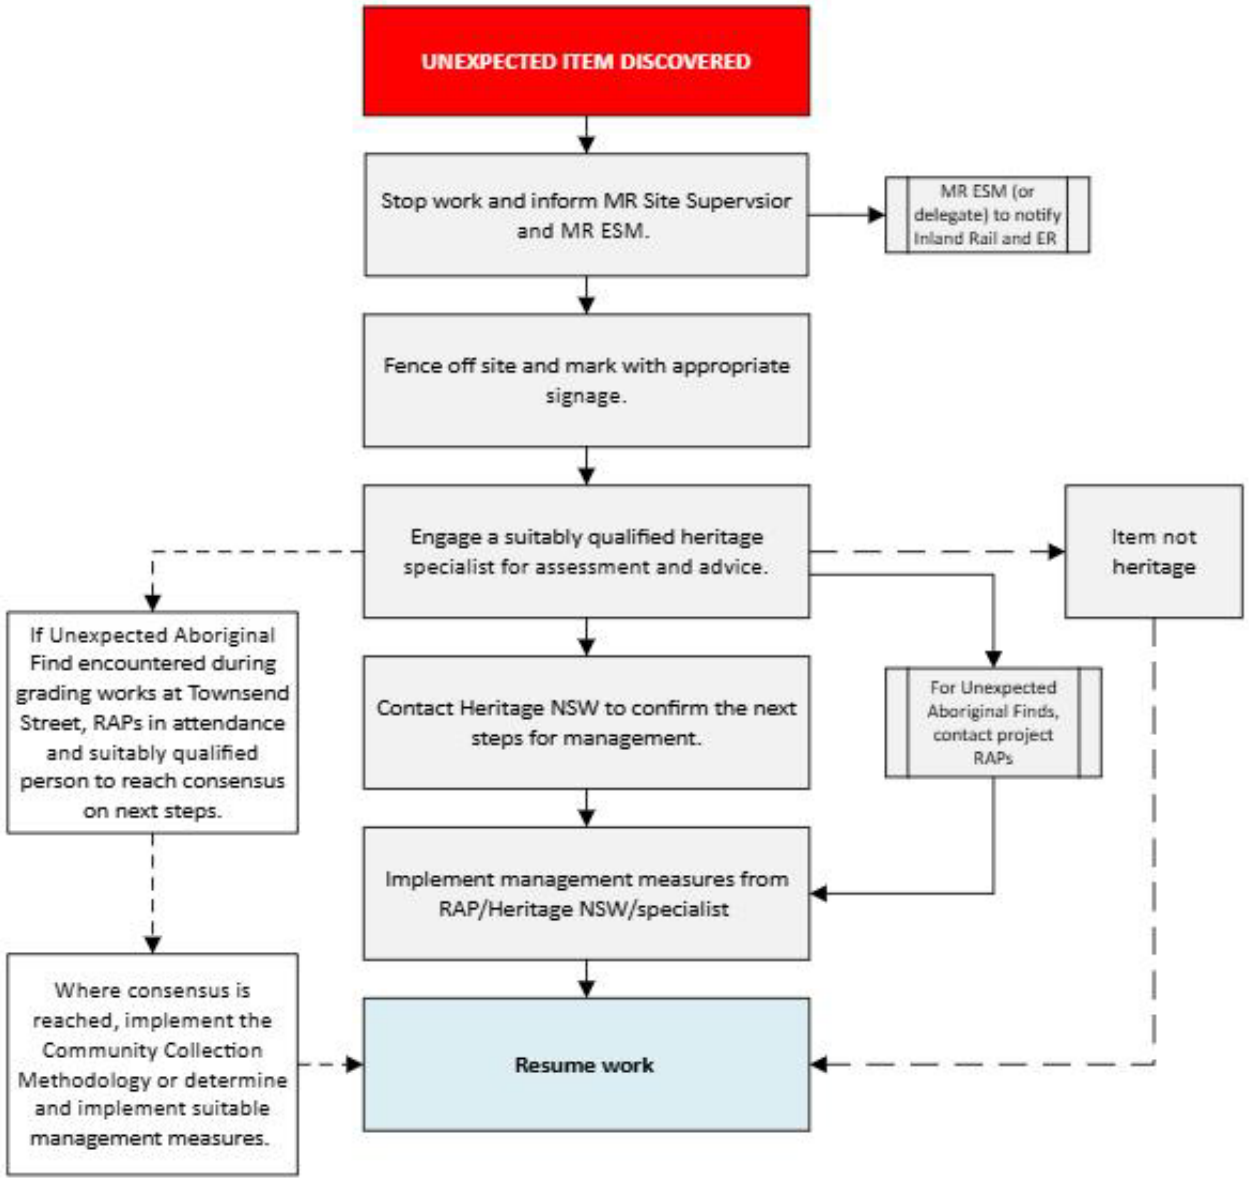

1. All ground-disturbance work in the vicinity of the find must cease immediately. The Site Supervisor is to be made aware of the object(s) and is to notify the MR Construction Manager and MR ESM. The MR ESM (or delegate) will notify the relevant Inland Rail (IR) representative and the Environmental Representative (ER).
2. The find will be temporarily fenced off as quickly as possible to ensure no damage/further damage to the object(s). Signage on the fencing is to state that the area is subject to environmental protection, that no ground disturbance is allowed, and should include relevant contact details for the MR ESM.
3. The MR ESM (or delegate) will contact a suitably qualified heritage specialist to assess the find. The heritage specialist will then determine the need for further investigation or management. The heritage specialist's assessment may be undertaken using good quality images, with a scale and several angles, however, if photographic evidence does not allow for certainty, then a site visit from the suitably qualified heritage specialist will be required.
4. If the find is an Aboriginal object, the MR ESM (or delegate) and/or heritage specialist will contact the RAPs to attend the site to inspect the find and to determine, in consultation, the next steps for management. These measures will include registration of the object in the Aboriginal Heritage Information Management System within a reasonable time. *
5. The MR ESM (or delegate) and/or heritage specialist will also contact Heritage NSW (phone 131 500; email heritagemailbox@environment.nsw.gov.au) to confirm the next steps for management.
6. Ground disturbance work in the vicinity of the find can only continue under supervision of a suitably qualified heritage specialist, having regard to any advice from Heritage NSW and RAPs.

Notes:

* Where an Aboriginal object or artefact is found during the survey or grading works on the unformed section of Townsend Street (see Section 6.1 of the CCHMP), the suitably qualified heritage specialist and RAPs would be in attendance at the site already. If general consensus is reached, the Community Collection Methodology (Section 6.1 of the CCHMP) will be implemented at the time of the survey/grading works.

In the event that a greater than expected density of artefacts and/or Aboriginal cultural heritage of greater than expected significance is identified, works (including collection activities) would stop and consultation with Heritage NSW and RAPs would be undertaken regarding the next steps (following Steps 5 and 6 of the above procedure).

Docusign Envelope ID: 48BDB7AD-A0C7-8AA6-807F-DA2CDEDCBD18

Flow Chart: Unexpected heritage finds

Docusign Envelope ID: 48BDB7AD-A0C7-8AA6-807F-DA2CDEDCBD18

UNEXPECTED HUMAN REMAINS PROCEDURE

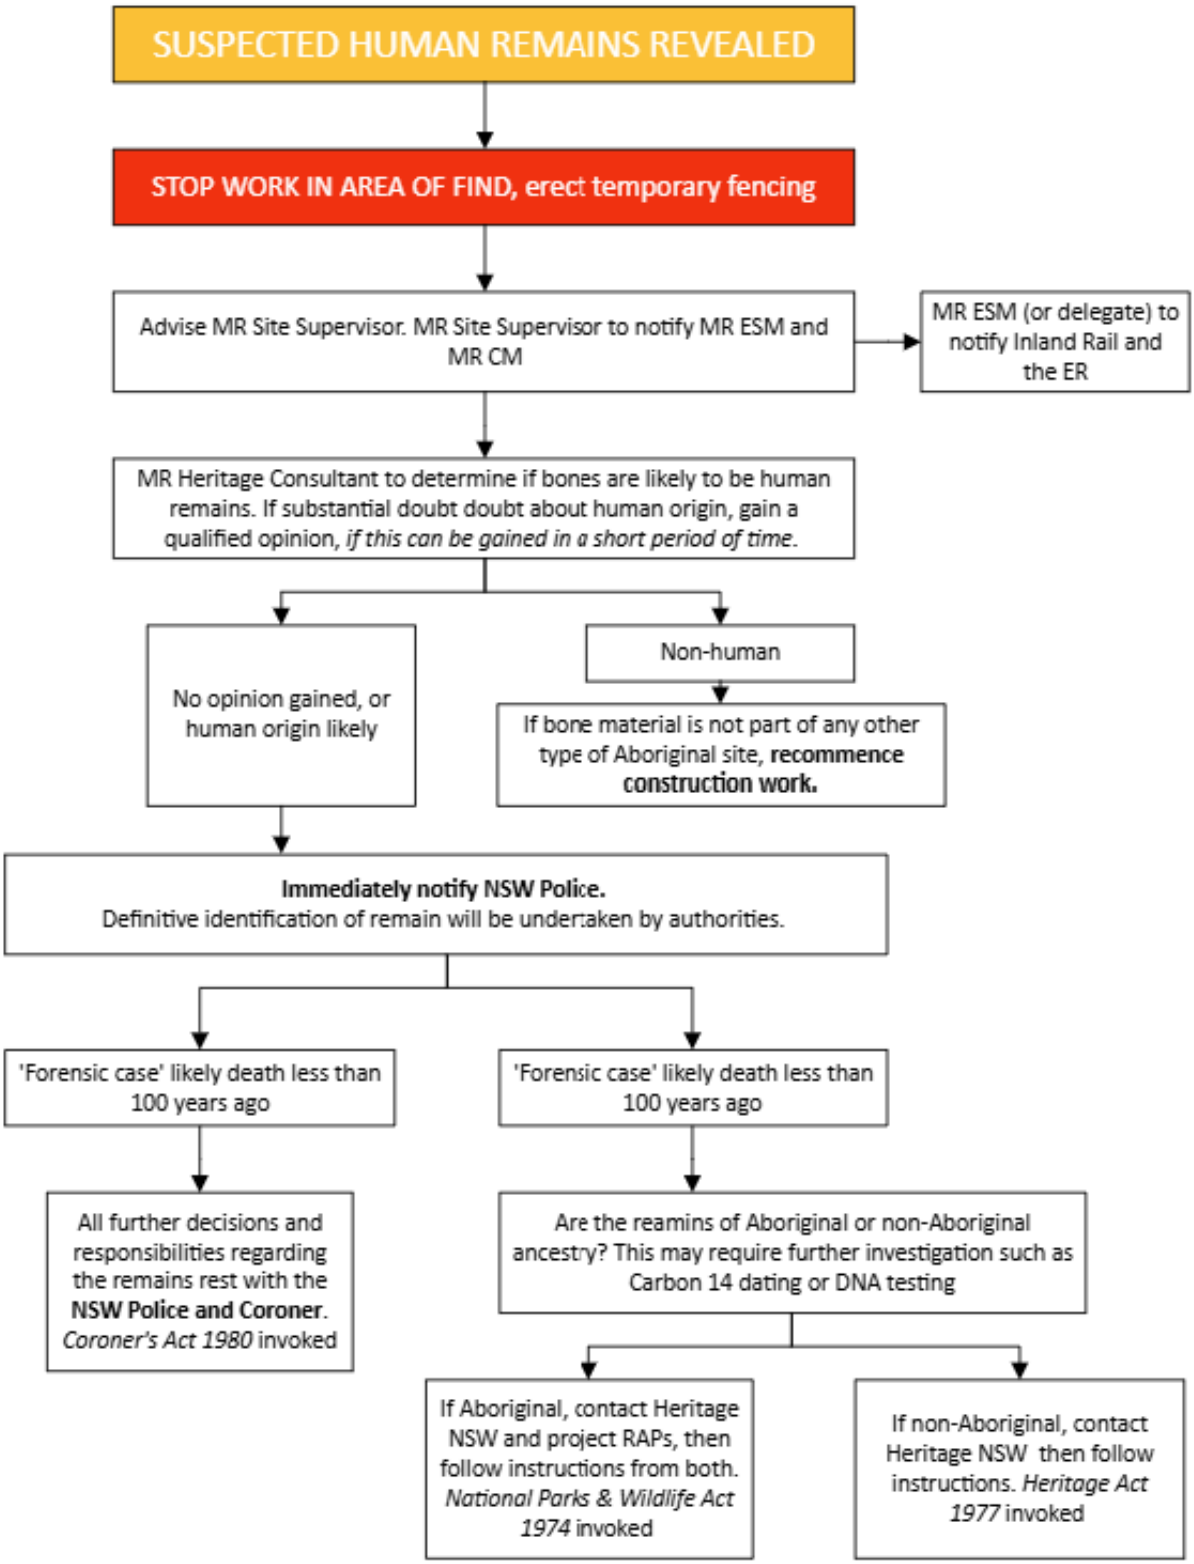

The procedure related to the discovery of suspected human skeletal material is based on Requirement 25 of the *Code of Practice for Archaeological Investigation of Aboriginal objects in NSW* (DECCW 2010b) and the *Skeletal Remains: Guidelines for the management of human skeletal remains under Heritage Act 1977* (NSW Heritage Office1998). A flow chart is supplied below.

If known, or suspected skeletal remains are encountered during the construction and/or operation of the project, the following procedure will be followed:

1. The area will be temporarily fenced immediately to ensure no damage/further damage to skeletal material. No skeletal material that remains in place should be disturbed from its location;
2. Works in the vicinity are to be stopped immediately;
3. The Site Supervisor is to be made aware of the skeletal material and is to notify the MR Environmental Manager and MR Construction Manager. Inland Rail Representatives and the ER are to be contacted at this stage;
4. Attempt to determine if the bones are animal or human. May require photos of the bones to be sent to the MR Heritage Consultant to determine if the remains are likely to be human or not;
5. If a qualified opinion concludes the bones are not human in origin and are unlikely to be part of an archaeological site works may recommence;
6. If no qualified opinion can be gained or the bones are suspected of being human, undertake the following:
    A. MR will contact Police, allowing Police to conduct an assessment to determine if the remains are part of a forensic case (less than 100 years old), or are archaeological (more than 100 years old);
    B. If the remains are assessed as ‘archaeological’, there then needs to be an attempt to determine if they are Aboriginal or non-Aboriginal;
        i) Inland Rail will contact the relevant stakeholders, including Heritage NSW (phone 131 555; email heritagemailbox@environment.nsw.gov.au) and RAPs (if the remains are Aboriginal);
        ii) All further activities will be determined by Heritage NSW and the RAPs (if the remains are Aboriginal);
        iii) No work may recommence in the area of the find until Heritage NSW provides the approval to do so.

Docusign Envelope ID: 48BDB7AD-A0C7-8AA6-807F-DA2CDEDCBD18

Flow Chart: Suspected Human remains

Appendix F Unexpected Finds Procedure (Flora and Fauna)

Docusign Envelope ID: 48BDB7AD-A0C7-8AA6-807F-DA2CDEDCBD18

Discovery of unexpected threatened entity i.e.
(a) any additional impact to threatened species or ecological communities that were included in the assessment but have been found at a new location
(b) to any threatened entity that was not offset.

Stop all work which is likely to impact on the threatened entity.
The person who discovered the find is to notify all project personnel woking in the immediate vicinity of the find(s) so that any potential disturbance activity can be halted.

Notify Site Supervisor and Environmental Manager

All personnel

Notify and consult the project ecologist and install delineation (for flora and/ or fauna habitat). Project ecologist to confirm if the threatened entity would be potentially impacted and confirm appropriateness of delineation/ initial measures.

Is the species or community a listed threatened entity under State or Commonwealth legislation?

No

Yes

Has impact to the species or community in that location been assessed in the EAD and will the absolute clearing extent be within the restrictions posed by Condition E23?

Yes

The impact to the species or community was a assessed by the EAD and is permissible in that location (Any conditions of the Infrastructure Approval must also be considered). **The impact is therefore permissible**

Notify DPHI and BCS in writing on any additional mitigation measures to be implemented

No

The impact to the species or community was NOT addressed in the EAD , follow up investigation is required

Martinus Rail to consult with the Project Ecologist and IR when developing actions to assess and manage the find.

For EPBC Act species (and as required under the BC Act) conduct an assessment of significance and review controls to mitigate impacts. Where relevant consider additional controls to minimise impacts to the unexpected find

Consult with DPHI/BCS/DCCEEW as relevant regarding proposed measures, impacts and follow up actions

Record find and follow up actions

Confirm with DPHI/BCS/DCCEEW (as relevant) that proposed controls are adequate to proceed.

Records of the find to be submitted to BioNet.

Biodiversity assessment to be prepared and implemented (or alternatively the BDAR is to be updated with new impacts) and additional approval documents to be prepared as required.

Measures which can be implemented prior to impact are to be implemented.

Measures required to be implemented at a later date (i.e. any revision to the offsets) with be implemented following impacts

Records of the find to be submitted to BioNet

Martinus Rail Environment Manager or delegate authorises Unexpected Finds Hold Point Release

Recommence works with updated controls where necessary

Appendix G Unexpected Finds Procedure (Contamination)

Docusign Envelope ID: 48BDB7AD-A0C7-8AA6-807F-DA2CDEDCBD18

UNEXPECTED FINDS PROCEDURE FOR CONTAMINATION

MANAGEMENT AND RESPONSIBILITY

INDUCTION/ TOOLBOX TALKS
All personnel are to receive Project/ Site Inductions and on-going training via Toolbox Talks

All personnel

EVIDENCE OF CONTAMINATION OBSERVED

STOP ALL WORK IN THE AREA IMMEDIATELY AND

PREVENT FURTHER ACTIVITY IN THE AREA.

NOTIFY THE SITE SUPERVISOR AND SAFETY MANAGER , ENVIRONMENT MANAGER AND CORDON OFF AREA.

Site Supervisor
Project Manager
Lead Safety Manager
Environment Manager

- Do not touch or disturb the item/ material
- Delineate the find from the rest of the worksite
- Inform the Environment Manager regarding the potential contamination find. The following detail should be provided:
  - The location of the potential contamination
  - Visual appearance
  - Odour (if any)
  - Depth
  - Surrounding material and works being undertaken at the time of discovering the material
- WHS and EM to determine immediate actions to prevent WHS and ENV issues
- EM to notify IR of Unexpected Find

ASSESSMENT

Contamination Consultant to assess and classify the unexpected find in accordance with the NSW regulatory requirements, including sampling and laboratory analysis.

Contamination Consultant

MANAGEMENT STRATEGY

- Contamination Consultant to develop a provide a plan for managing and/or remediating the material
- IR/ARTC to review and accept the proposed strategy

Environment Manager
Contamination Consultant
IR/ARTC

STRATEGY IMPLEMENTATION

- Implement the approved management and/or remediation as per the Contamination consultants direction
- IR/ARTC to review and accept the proposed strategy (if required)

Contamination Consultant
Site Supervisor
Environment Manager

Once the contamination find has been mitigated and clearance report received from the contamination consultant. EM is to notify Project Manager who is to approve re-commencement of works in the vicinity of the remediation site. IR/ARTC will review clearance report and must provide approval/acceptance prior to recommencing works

Environment Manager
Project Manager
IR/ARTC

Recommence works

Asbestos

An unexpected find occurs when Asbestos Containing Material (ACM) not identified in the Asbestos Register is found on site. In the event of an unexpected find the below steps are to be followed:

1. The area is to be demarcated, works in the area to cease and workers notified
2. Notify the Site Supervisor first. Site Supervisor will then notify the Project Manager, Safety Manager and Environment Manager.
3. Notify IR/ARTC within five (5) business days after the discovery.
4. Control dust by with dust suppression
5. A certified occupational hygienist is to be engaged to provide recommendations to manage the area
6. Occupational hygienist arrange for testing of the suspected ACM and monitoring of the area (if required)
7. The area is to be made safe as per the certified

Contamination Consultant

Works undertaken in relation to Contamination to investigate, assess, remediate or validate remediation or land use suitability shall be undertaken by a suitably qualified person holding valid 'Site Contamination' certification under the Certified Environment Practitioners Scheme (CEnvP) - Environment Institute of Australia and New Zealand or Certified Professional Soil Scientist – Contaminated Site Assessment and Management under the Soil Science Australia Certification Scheme.

With relevant qualifications and experience in keeping with the National Environmental Protection (Assessment of Site Contamination) Measure 1999 Amendment 2013 (ASC NEPM 2013).

Procedure

1) Potential contaminated soil/material encountered during construction activities. STOP ALL WORK AND NOTIFY IMMEDIATELY
2) Undertake a site/area contamination investigation. The Environment Manager (EM) is to assess the situation and if considered necessary, commission a suitably qualified contamination specialist to undertake a contamination investigation in the area of the find.
3) The consultation specialists in consultation with the EM will determine the appropriate management measures to be implemented. This may include leaving contamination undisturbed if it does not pose unacceptable risks to human health or the environment, capping of contamination, treatment or offsite disposal. If the material is to be disposed of offsite, ensure the waste facility is appropriately licensed. Contaminated material requiring off-site disposal is to be classified in accordance with the Waste Classification Guidelines – Part 1: Classification of Waste, NSW EPA 2014. Maintain records to demonstrate waste material was appropriately managed
4) If the material is determined to be Acid Sulfate Soil (ASS) or Potential Acid Sulfate Soil (PASS), an Acid Sulfate Soil Management Plan would be prepared and implemented in accordance with the Acid Sulfate Soil Manual (Acid Sulfate Soil Management Advisory Committee, August 1998).
5) Prior to any contamination investigation, management or remediation activities appropriate work method documentation encompassing safety and environmental risk management will be prepared for review and approval by the EM and IR
6) If required a Remedial Action Plan (RAP) will be prepared in accordance with legislative requirements
7) If material is to be treated and reused or left in situ ensure appropriate records are maintained and location of material (survey) is undertaken and provided to IR
8) Once the contamination find has been mitigated and clearance report received from the contamination consultant. This report is to be submitted to IR/ARTC for acceptance prior to recommencement of work
9) EM is to notify Project Manager who is to approve re-commencement of works in the vicinity of the remediation site.
